Outline of the Japan HPV Challenge Program
(A joint program among the private and the public sectors for collecting and releasing safety information of Japan HPV existing chemical substances)

March 2007
I-1. Japan’s Chemical Substances Control Law

- The Chemical Substances Control Law (CSCL: kashinhou) was enacted in Japan in 1973.
- In 1972, MITI made “MITI Inventory” consisting of about 20,000 chemicals that had been already manufactured or imported before CSCL was issued in Japan.
- “New Chemicals” are not listed in MITI Inventory. Pre-notification is necessary for manufacturing/import of “New Chemicals” in Japan.
- Three Ministries are in charge of enforcement of CSCL.
  - Ministry of Health, Labour and Welfare (MHLW)
  - Ministry of Economy, Trade and Industry (METI)
  - Ministry of the Environment (MOE)

( ¯_[No role of local governments under CSCL]_¯)
I-2. Existing Chemicals under CSCL

CSCL was enacted in 1973.

- The Diet passed an additional resolution that the government would assess the safety of existing chemical substances.

(Role sharing among the government and the industry when CSCL was started)

1. Since there are huge number of existing chemicals, collecting data (test) by only the government was not advanced rapidly.

2. At the same time, companies can manufacture and import high volumes of existing chemicals without pre-notification. Concern about safety of HPV arose.

Collecting data of Japan HPV existing chemicals quickly has been a big challenge.
I-3. History before the Program was launched

✓ Worldwide approaches to existing chemicals were advanced in the 1990s.
  ➢ Global cooperation, led by OECD since 1992. (*Japan has been contributing as well*)

✓ CSCL was revised in 2003.
  ➢ The joint council involved with the industrial circle proposed that the safety assessment of existing chemicals be conducted jointly by both the public and private sectors.
  ➢ The Diet passed an additional resolution that the public and private sectors should jointly promote systematic collection of data on existing chemical substances.

✓ “Japan HPV Challenge Program” was launched in 2005.
  ➢ The new framework to gather safety information of existing chemicals under cooperation between the private and public sectors was started.
II-1. Two features of the Program

US HPV Challenge Program is the model of Japan HPV Challenge Program.

Two features:
1. **Voluntary program** under cooperation between the private and public sectors
   - Safety data of high priority (HPV) existing chemicals are collected voluntarily by Sponsor companies (private sector).

2. **Releasing data through web sites**
   - The collected safety information will be publicly available.
   - It can be utilized for the self-management systems by companies, risk assessment by researchers, and chemicals management policies by the government.
II-2. High Priority Chemicals (Target)

Definition of High Priority Chemicals
(Target: Japan HPV)

- Organic chemicals (except for Polymers)
- Identify chemical substances based on the CAS number.
  (not Japan’s CSCL number)
- HPV $\Rightarrow$ over total 1,000 tons per year (in Japan)

Based on METI’s “survey of import/manufacturing volume of chemical substances in 2001”

Categorized those target chemicals into three types:

Type 1: Collection finished (through OECD HPV or US HPV Program),
Type 2: Data to be collected (through OECD or US Program)
Type 3: Data not to be collected

The type 3 is the core target of Japan’s program. The Japanese government asked private firms to become voluntary “Sponsors” that will gather information of Core target chemicals and make a robust summary.
II-4. Why over 1,000 tons?

✓ OECD HPV definition: Over 1,000 tons per year
✓ About 50% of chemical substances produced and imported total over 1,000 tons a year are detected in environmental monitoring.

The more produced, the more important for Japanese society!

 Relationships between production volume and the amount detected in environmental monitoring by Ministry of the Environment
II-5. Total image of the Target chemicals

- **No Information so far**
  - Collecting data through Japan HPV Challenge Program *(Core Target)*
    - 140 chemicals

- **Information (to be) collected**
  - Collection through international cooperation through the OECD HPV program *(Japan contributes to OECD program as well)*
    - 417 chemicals

- **Existing chemical substances produced and imported in Japan over 1000 tons**
  - Collection through the US Challenge Program
    - 95 chemicals

- **Japan HPV (Target of the program)**
  - 652 chemicals
II-6. Data format

Screening Information Data Set (SIDS):

- **Physicochemical properties**: Melting point, Boiling point, Relative density, Vapor pressure, Partition coefficient, Water solubility, Dissociation constant
- **Environmental fate and Pathways**: Photodegradability, Stability in water, Biodegradability, Transmigration and distribution
- **Ecotoxicity Tests**: Acute toxicity to fish, Acute toxicity to aquatic invertebrates, Toxicity to aquatic plants
- **Human Health Effects**: Acute toxicity, Repeated dose toxicity, Genetic Toxicity (effects on the gene and chromosome), Reproductive toxicity
III-1. Role of the government

1. Administer the program (selecting target chemicals, disclose progress of the program, secretariat of the promotional committee, etc.)

2. Establish web site to release the collected data publicly

3. Check the reliability of data submitted by the Sponsor (METI: Physicochemical properties, Environmental fate and Pathways, MOE: Ecotoxicity Tests, MHLW: Human Health Effects)

- Keep getting data of existing chemicals that are manufactured and imported less than total 1,000 tons per year

(Role sharing among three Ministries in terms of collecting data of non-HPV existing chemicals)

<table>
<thead>
<tr>

<th>Biodegradation, Bioaccumulation, Physicochemical properties</th>
</tr>
</thead>
<tbody>
<tr>
<td>MOE</td>
<td>Acute toxicity to fish, Acute toxicity to aquatic invertebrates, Toxicity to aquatic plants</td>
</tr>
<tr>
<td>MHLW</td>
<td>Repeated dose toxicity, Genetic Toxicity (effects on the gene and chromosome)</td>
</tr>
</tbody>
</table>
III-2. Role of the Private firms

Companies or Consortia (Sponsor) will collect data of “Core Target” – *Sponsorship is not requirement under the law*

1. Identify the target chemicals
   - Japan HPV target list does not change, meaning that Japan’s program does not have “no longer HPV” scheme.
   - They can use “Category approach” like US HPV Program

2. Submit **registration letter** to the government

3. Submit **test plans** to the government

4. Make test if necessary and submit **Robust Summary** to the gov.

_Japan Chemical Industry Association (JCIA)_ plays an important role to facilitate Sponsorship.
III-3. Flow of the Program (1)

**US HPV Program**
- Submit Commitment letter
- Submit test plans
- Tests if necessary
- Submit Robust Summary reports

**Japan HPV Program**
- Registration as sponsorship
- Submit test plans
- Tests if necessary
- Submit Robust Summary reports

Core Target (Japan HPV)
Check the reliability of data by the government
III-4. Flow of the Program (2)

<table>
<thead>
<tr>
<th>Sponsors (private companies)</th>
<th>Collect data and make summary</th>
</tr>
</thead>
</table>

- **Ministry of Health, Labour, and Welfare**
- **Ministry of Economy, Trade, and Industry**
- **Ministry of the Environment**

**“Three Ministries’ committee”**
Manage the program, publicize its progress, etc.

- **Program Promotion Committee**
  (Comprised of NGOs, industries and academics)

- **JCIA (industrial association)**
  Facilitate sponsorship by member companies
  Ask for participation
  Check the reliability of data

- **Ministry of Health, Labour, and Welfare**
  Release safety information to be widely used.
  (The government will make website)

- **Ministry of Economy, Trade, and Industry**
  Collect data (less than 1,000 ton per year)
  Japan HPV

- **Ministry of the Environment**
  Use the results
  "Three Ministries’ committee"
  Manage the program, publicize its progress, etc.

- **Assessment under regulatory requirements**
- **Risk assessment**
- **Self-management**
  (MSDS, etc.)

- **Keep collecting information by the government**
  Give advice on plans and check the progress
  Ask for participation
  Check the reliability of data

14
VI-1. Current Situation

(as of Nov. 2006)

• 62 companies and 3 associations has already joined the program as “Sponsors”
• 12 Consortiums has been formulated.
• 77 substances (of 140) has been already sponsored.
• Sponsor companies are making test plan now. (No data publicly available yet)

VI-2. Timeline of the Program

This program is still at an early stage.

June 2005  Launched the program
Recruiting Sponsors
Collecting Data

2008  Interim assessment of the program
