

# **Enhancement of EBPM**

**EBPM Promotion Office, Minister's Secretariat**  
**Economic and Industrial Policy Bureau**

# Future Concrete Efforts about EBPM in METI

- **METI shall initiate the enhancement of EBPM within the government, first by focusing on evaluating the effects of large-scale projects.**

## ① Deepening EBPM in policymaking process

- We will develop an “evaluation scenario” for future large-scale projects.  
\***We will specify policy effects, evaluation measure, and data collection method, and agree on the collection of data with business operators in advance.**
- In principle, after starting a project, collected data shall be disclosed, and policy effects shall be evaluated by a third party.
- We will aim to evaluate policy effects from multiple points of view, in addition to causal inference model (not necessarily limited to conventional methods of EBPM).

## ② Strengthening the Research Institute of Economy, Trade and Industry (RIETI) as a third-party verification agency

- We will establish “EBPM Center” in RIETI.
- RIETI, as a policy research institution, will propose the evaluation method when making evaluation scenarios, and make evaluations by itself or proposals to other third-party institutions.
- RIETI will aim for an institution which can accumulate and release analyses of METI’s policy, collect existing literature, and build networks with foreign researchers.

## ③ Next steps

- As a trial, we will design and announce evaluation scenario of the following government projects:  
( 1 ) Grants for Securing Domestic Production Facilities of Advanced Semiconductor  
( 2 ) Green Innovation Funding Program  
→We will conduct the same process regarding new large-scale government projects in principle.
- We will evaluate policy effects of past finished large-scale government projects sequentially.
