

Roadmap towards Air Mobility Revolution

20 December 2018 Public-Private Council for Air Mobility Revolution

2019~

Mid-2020s

2030s~

This Roadmap depicts a flow of technology developments and establishment of laws and regulations which should be undertaken with public-private cooperation. The Roadmap focuses on the possible innovation of “flying vehicles” – air mobility which is more familiar and convenient and characterized by such attributes as an electrified, vertical takeoff and landing, and human pilotless aircraft – will lead to overcoming transportation issues in both urban and regional areas. (Note) It should be recognized that a grand design pertaining to use of the sky will be necessary under developmental trends of other transportation equipment and engines.
