Chapter 1: China

TRANSPARENCY, UNIFORM ADMINISTRATION, AND JUDICIAL REVIEW

COMMITMENTS UPON ACCESSION

Since its accession to the WTO, China now has obligations under the provisions of Article X of the GATT and Article VI of GATS to administer all measures in a reasonable, objective and impartial manner. China has specifically committed in the Protocol to: (1) apply the WTO Agreement to the entire customs territory of China; (2) observe its WTO obligations not only within the central government but also in local governments; (3) apply and administer the laws, regulations and measures covering trade in goods and services, TRIPS and management of foreign exchange in a consistent, transparent, and reasonable way; (4) implement only such laws, regulations, and measures which have been published and can be easily accessed by other WTO member countries; (5) have all administrative actions affecting trade subject to review by a judicial body independent of the agency entrusted with administrative enforcement; and (6) establish a mechanism for the petitioning of complaints in cases of inconsistent application of trade-related systems and regular official publications with an inquiry point to ensure transparency.

STATUS OF IMPLEMENTATION AND POINTS TO BE RECTIFIED

(1) Transparency

<Status of Implementation>

Previously, many laws and regulations had been unpublished and even those that were published, particularly regulations at the local level, were difficult to obtain. Moreover, in many cases, the time from promulgation to implementation was so short that companies could not adequately prepare to respond to the new systems.

In recent years, China has made considerable efforts to improve the transparency of trade-related policies and measures, such as: (i) the active disclosure of laws and regulations through the Internet and the Official Gazette; (ii) the establishment of “the World Organization Notice Enquiry Center (World Trade Organization Notification Enquiry Center)” at the Ministry of Commerce; and (iii) the promulgation of Orders by the State Council in December 2001, to introduce a comment period and to allow the holding of a public hearing prior to the actual promulgation of laws and orders.

On the legislative front, the Government Information Disclosure Ordinance (State Council) came into force in May 2008. This Ordinance stipulates that certain information - including information on the establishment of organizations within government institutions and their functions, administrative processes, etc. - should be made public through the Official Gazette, government websites or other means easily accessible to the general public. Moreover, some central government agencies and local governments (provinces and cities) have disclosed financial budget information. With regard to the Government Information Disclosure Ordinance (State Council), the Research Center for Government by Law at China University of Political Science and Law and other organizations have been hosting meetings of a study group for revising the Government Information Disclosure Ordinance since 2013, and have discussed revision of the ordinance on an ongoing basis. Amendment work is also under way at the State Council. At present, the ordinance has not been revised or replaced with new legislation. However, established in the 2016 Legislation Plan of the State Council, this Ordinance was among matters of urgency to be addressed to deepen overall reform, and therefore revision work may be accelerating.
Part I: Problems of Trade Policies and Measures in Individual Countries and Regions

In addition, the General Office of the Central Committee of the Communist Party of China and the General Office of the State Council issued the Opinions on Overall Promotion of Government Information Disclosure on February 17, 2016, and the General Office of the State Council issued the Notice of Administrative Instructions for the “Opinions on Overall Promotion of Administrative Information Disclosure” on November 10, 2016. In these documents administrative instructions are set out to promote the disclosure of information on decisions, enforcement, management, services and results (collectively referred to as “Five Disclosures”). Specific details of the above instructions include: (1) promotion and enhancement of Five Disclosures; (2) enhanced explanation about policies, (3) active response to issues of concern, (4) enhanced development of platforms, (5) expansion of participation by the public, (6) enhanced provision of instructions to organizations, etc.

In addition, on July 30, 2016, the General Office of the State Council issued the Notice on Better Responses to Public Opinion on Administration in Administrative Information Disclosure Activity by the General Office of the State Council. This action was driven by a statement made by Premier Li Keqiang on February 17, 2016, that a modern government should respond to expectations and concerns of its people in a timely manner. It also was driven by an idea that administrative information disclosure and responses to public opinion regarding administration should be enhanced against the background of the frequent occurrence of expressions of public opinion due to the growth of the Internet and new media. Priority actions are directed towards issues such as: misunderstanding and misinterpretation of policies and measures; matters related directly to and having a relatively large impact on public interests; matters related to people’s livelihood and those that greatly harm social morality; matters related to responses to emergency situations and natural disasters; and public opinion on administration that demand that higher levels of government take proactive measures on issues related to lower levels. In addition, there is clarification regarding the departments in charge of responses. Deadlines are also clarified by requiring a press conference to be held within 24 hours after the occurrence of a special serious incident or serious emergency incident and requiring a response to be made within 48 hours after the occurrence of other incidents.

On the judicial level, in December 2009, the Supreme People’s Court promulgated the “Notice of Six Provisions on Judicial Transparency” and the “Certain Provisions on Acceptance by the People’s Courts of Supervision by the Media and Public Opinion,” thereby requesting that courts at levels make public the prosecution process, court proceedings, executions, public hearings, records and proceeding-related clerical work, and proactively accept supervision by media opinions.

Further, on February 26, 2016, the Supreme People’s Court published “Judicial Reforms of Chinese Courts” (White Paper), and on September 12, 2016, the State Council Information Office published “New Progress in Security of Human Rights in the Judicial Field of China” (White Paper). In the above papers, the status of Three Platforms for Judicial Transparency of the Supreme People’s Court is summarized as follows:

- Regarding disclosure of trial process, the China Trial Process Information Disclosure Website was launched on November 13, 2014. By the end of 2014, a total of 429 notices of trial and 36,276 trial information disclosure items were published on this platform, and there were 878,500 visitors to the website by the end of 2015.

- Regarding disclosure of judgments, verdicts and reconciliation statements, the Website of Judicial Opinions of China was launched on July 1, 2013. The number of judgments, verdicts and reconciliation statements published increased from approximately 5.69 million at the end of 2014 to 14.48 million at the end of 2015. In addition, the number of visitors to the website reached 410 million by the end of 2015.

- Regarding disclosure of enforcement information, the China Enforcement Information Disclosure
Website was launched on November 1, 2014. The number of pieces of information disclosed on this platform and relating to persons subject to enforcement increased from slightly over 27.89 million at the end of 2014 to 34.347 million at the end of 2015. The number of persons who searched for and used information on cases of enforcement increased to 36.85 million by the end of 2015.

Other than the above, the on-line live streaming of trials and court proceedings is being promoted and the number of trials streamed in 2015 was 3,795.

The “Case Information Disclosure Website of the Supreme People’s Procuratorate” was launched in October 2014, and slightly more than 2.54 million pieces of case process information, slightly more than 1.02 million pieces of material case information and slightly more than 760,000 of valid legal documents were disclosed on the website by the end of 2015.

<Problems under International Rules>

Although a certain level of progress has been observed recently, the progress seen in public disclosure since the Government Information Disclosure Ordinance went into effect has been inadequate, due to the absence of an administrative system for the dissemination of administrative instructions and such and to claims by local city governments that the information requested either qualifies as state secrets or is not available. Furthermore, even though public comments are solicited, other issues are observed, such as the fact that the period for hearing opinions is inadequate or the existence of a public hearing is not widely known. If these issues relate to matters falling under the jurisdiction of the WTO Agreements, it is possible that they conflict with the provisions of GATT Article X and GATS Article VI, which provide for securing objectivity and impartiality of the measure, and Article 2 of the Accession Protocol, which provides for ensuring transparency.

SHORT NOTICE OF CHANGES IN EXPORT VALUE-ADDED TAX REFUND RATE

China has frequently adjusted the rate of the value-added tax refund at the time of exports. In view of the financial crisis, in particular, China has moved to raise its VAT export refund rates. However, promulgation and effectuation of regulations are still been done in very short notice.

For example, the “Notice on Export Refund Rates for Certain Products” (Cai Shui [2014] No. 150) issued on December 31, 2014, set forth that the raising of the export refund rates for some high-value-added products, processed maize products, and textile and garments and the elimination of export refunds for boron steel were to come into effect on the following day, on January 1, 2015, and the lowering of the export refund rates for wigs, hair extensions, and their materials were to come into effect on April 1, 2015. While there was an allowance of about 90 days until the lowering of the export tax rebate rates was to come into effect, the raising of the refund rates and the elimination of the refunds came into effect the day following the issuance of the notice. Under such circumstances, companies cannot respond to policy changes well in advance. In addition, the Notice on Export Refund Rates for Products Such as Electrical Equipment and Product Oils (Cai Shui [2016] No. 113) issued on November 4, 2016, states that export refund rates for a total of 418 items, including cameras, video cameras, internal combustion engines, gasoline, aircraft fuel, diesel oil, etc., are to be raised to 17%, but the date of enforcement is November 1, 2016, which is before the date of issuance. As shown in this example, regulations were enforced before issuance rather than being enforced on the day of issuance. Thus, it is still difficult for companies to respond to such changes well in advance.

As such sudden changes in the regulations and measures undermine business predictability and could produce a serious impact on corporate management; there is growing awareness of this issue as an investment risk. Japan raised this issue in the Japan-China Economic Partnership Consultations in December 2006 and October 2007. Japan believes that China’s economic and trade policies should be conducted in ways to secure transparency and predictability.
In addition, because reimbursement of indirect taxes is not deemed to be a subsidy under the Agreement on Subsidies and Countervailing Measures (ASCM), a refund of the value-added tax does not formally violate the ASCM. Because the refund rate has frequently been adjusted as described above, however, it could be argued that in actuality the value-added tax is arbitrarily controlled as part of industrial policies. It is therefore not consistent with the spirit of the ASCM Agreement, or the destination principle (which provides that the destination country, where the final consumers reside, has the right to tax), and can possibly be challenged under the ASCM as being in reality export subsidies.

(2) Uniform Administration

<Status of Implementation>

Considering the business of the foreign companies, China needs to develop laws and orders that are consistent between the Ministries, Committees and Governments of central, provincial and local levels. Even under consistent laws and orders, foreign-owned companies may find barriers against inter-regional business development due to discretion in the application of laws and orders or inconsistency in their interpretation. Moreover, due to the greater autonomy of local government in China, foreign-owned companies often face regulations and costs imposed only in a certain locality.

In recent years, China has instituted “vertical management” reforms in important sectors like customs, tax services, and finance, as well as sectors where the interests of the central and local governments tend to be at odds with one another. The country has also improved the inefficiency of administration caused by the lack of administrative consistency at each level to a certain extent. What is more, efforts at the local level towards introducing “vertical management” have been noted in the environmental conservation sector. The central government and some local governments have undertaken to simplify/merge government institutions.

“Vertical management” has made little to no progress, however, in relations between the central and local governments. Indeed, the vertical control system for foods and medicines, for instance, has been abolished below the ministerial level in line with the wishes expressed by the central government to give local governments greater responsibility for the oversight of foods and medicines. In addition, there are still cases of non-uniform administration within the central government. For example, the Ministry of Culture and the General Administration of Press and Publication conflicted over the scope of permission and the right to punish. Specifically, when the General Administration of Press and Publication decided to punish an operating company with regard to the authority of supervision and administration of online games, the Ministry of Culture gave permission for operation, deeming the decision made by the General Administration of Press and Publication to be an act beyond its authority. Thereafter, the General Administration of Press and Publication promulgated eight administrative measures regarding online games. They required examination by and permission from the General Administration of Press and Publication in order to operate domestically produced online games on the Internet. On the other hand, the Ministry of Culture promulgated the “Provisional Online Game Administration Method” (June 2010), which provided that examination by, permission from, and registration with the Ministry of Culture shall be required for operating imported and domestically produced online games. Therefore, conflict between them has yet to be resolved. Therefore, domestic and foreign online games are placed under duplicate examinations, permissions, and administrations, causing burdens in terms of both time and costs.

<Problems under International Rules>

As described above, inconsistent interpretation/operation exists between the central government and local governments, and this may be a violation of Item 2, Article 2 (A) of the Accession Protocol, which
provides for uniform application and operation of laws, regulations, and measures between the central government and local governments.

(3) Judicial Review

<Status of Implementation>

Some improvement was seen in the judicial review systems, as China incorporated a rule designating that administrative decisions could be the subject of judicial review (for example “Anti-Dumping Regulation” and “Patent Law” etc.) and established the Chinese International Economy and Trade Arbitration Committee (CIETAC) as a court to arbitrate any disputes over commerce. In 2007 the CIETAC promulgated the enforcement order of Law on Administrative Reconsideration, which provided the protection of vested interests, aiming for the improvement of the judicial review system. The number of administrative lawsuits has increased in recent years and, as evidenced by a judicial interpretation handed down by the Supreme People’s Court in January 2008 prescribing in detail the jurisdiction for administrative lawsuits and addressing the issue of lawsuit withdrawal, institutional improvements have been made.

However, WTO member countries expressed their strong concern at the Accession Working Party on the neutrality and precision of Chinese legal judgments, as well as the sound and steady execution of judgments and rulings. For example, in implementing the Administrative Procedure Law (1990) of China, local courts for various reasons often refuse to accept administrative cases that they should accept. To deal with this problem, the Decision of the Standing Committee of the National People's Congress on Revising the Administrative Procedure Law of the People's Republic of China was adopted at the 11th Session of the 12th Standing Committee of the National People's Congress of the People's Republic of China on November 1, 2014. The decision was promulgated by the Order of the President of the People's Republic of China (No.15) of 2014 and came into effect May 1, 2015. This was the first revision of the Administrative Procedure Law since it entered into effect October 1, 1990. Under the conventional Administrative Procedure Law, it was difficult to bring a lawsuit, conduct a review, and execute a judgment or order. Therefore, issues that should be resolved through a lawsuit were often addressed through complaint letters and petitions, causing people these procedures instead of resorting to law. With regard to such issues, the recent revision lowered hurdles for lawsuits, expanded the scope of cases acceptable, eliminated obstructions against accepting a case, made the review standards stricter, and strengthened the responsibility to respond to an action. Continued improvement is desired with regard to judicial review in China.

<Problems under International Rules>

If a court unduly refuses to accept an administrative case as described above, it may constitute a violation of Item 2, Article 3 (D) of the Accession Protocol, which ensures the right to appeal administrative decisions to a court.

EXPORT RESTRICTIONS

(1) Imposition of Export Tax

<Outline of the Measure>

On November 1, 2006, China put into effect a table of provisional export tariff-rate adjustments. Of the 110 items listed in the table, only 13 (including but not limited to ferromanganese, ferrochrome,
crude steel, anode copper for electrolytic refining and copper and aluminum scrap) are included in Annex 6 of the WTO Accession Protocol, which is a list of products exempted from the ban on taxation on exports under Item 3, Article 11 of the Protocol. Export tariffs have also been imposed on steel products, as well as rare earths, tungsten and molybdenum, coal, chemical fertilizers, and raw materials used in their production; and export restrictions have been strengthened from 2007 onward. Export tariffs are newly imposed on Strip Cast Alloys from 2012.

The Appellate Body decision regarding China’s measures relating to nine types of raw materials (DS 394, 395, 398, for which the United States, the EU and Mexico requested the establishment of a panel in 2009; see (4) of 4. “Major Cases”, Chapter 3 in Part II for details), released at the end of January 2012, concluded that imposition of export taxes and export restrictions by China violated the WTO Agreements. In response to the recommendations in this report, on January 1, 2013 (the time limit for complying with the recommendations was December 31, 2012) China eliminated export taxes on seven raw materials (bauxite, coke, fluorite, magnesium, manganese, silicon metal and zinc) and adjusted the tax rate on yellow phosphorus to fall within the range set forth in the Accession Protocol.

In addition, the Appellate Body in DS431, 432 and 433 (China’s measures relating to the export restrictions on three items including rare earths: see (5) of 4. “Major Cases” in Chapter 3, Part II for details) issued a report on August 7, 2014, concluding that China’s export restriction measures (export tax and quantitative export restrictions, etc.) on rare earths, tungsten, and molybdenum violate the WTO Agreements. In response to this report, China made an announcement on April 23, 2015 that it would lift export taxes on rare earths, tungsten, and molybdenum on May 1; it did so on May 1 as announced.

**<Problems under International Rules>**

Under Item 3, Article 11 of its WTO Accession Protocol, China committed itself to abolishing all taxes and surcharges imposed on exports except in the case of taxation on products listed in Annex 6 or where taxation is allowed under GATT Article VIII. Therefore, if China imposes export taxes on products other than those listed products, such measures may be in violation of the commitment of the WTO Accession Protocol. For example, since products such as coal and nonferrous metals on which provisional export tariffs were imposed are not included in Annex 6, the measures of the Chinese Government violate the Accession Protocol. (See Section II, Chapter 3 (Reference) “Export Restrictions” with regard to other laws pertaining to export restrictions.)

(2) Export Restrictions on Raw Materials

<Outline of the Measure>

On January 1, 2002, China issued the “FY 2002 Catalog of Issuance of Licenses Based on Classification of Products Controlled with Export License” and a notice regarding related issues, which established an institute for issuing export licenses, as well as 54 items subject to export licenses. The “FY2015 Catalog of Goods Subject to Export License Administration” lists 591 items as subject to export licenses.

China thus continued to enforce quantitative restrictions on exports of raw materials and intermediate goods even after its accession to the WTO. GATT Article XX(g) stipulates that quantitative restrictions on exports may be permitted on an exceptional basis for measures “relating to the conservation of exhaustible natural resources”. However, where the design and structure of the China’s export restriction measures for the raw materials and the intermediate products are preferential treatment to Chinese domestic industry, then, the measures do not meet the criteria of “relating to the conservation of exhaustible natural resources.”. GATT Article XX(g) also requires these restrictions be accompanied by “restrictions on domestic production or consumption”; it is not entirely clear whether such domestic restrictions had been put into place within China.

The Chinese Government has issued export licenses for many raw material products to exercise control over the parties permitted to export these products and the quantities that can be exported.

<Problems under International Rules>

GATT Article XX(g) stipulates that quantitative restrictions on exports may be permitted on an exceptional basis as measures “relating to the conservation of exhaustible natural resources”. However,
where the design and structure of the China’s export restriction measures for the raw materials and the intermediate products is preferential treatment to Chinese domestic industry, then the measures do not meet the criteria of “relating to the conservation of exhaustible natural resources”. GATT Article XX(g) also requires these restrictions be accompanied by “restrictions on domestic production or consumption”; it is not entirely clear whether such domestic restrictions have been put into place within China. China’s compliance with GATT Article XI and Article XX(g) is thus in question.

<Recent Developments>

In June 2009, the United States and the EU filed a request for consultations with the WTO (Mexico also requested consultations in August), claiming that China’s quantitative restrictions on exports and imposition of export taxes on nine raw materials (bauxite, coke, fluorite, magnesium, manganese, silicon metal, silicon carbide, yellow phosphor and zinc) are not consistent with Article XI of the GATT and China’s WTO Accession Protocol. The consultations failed to settle the dispute, and the three countries requested establishment of a panel. A panel was established on December 21, 2009 (DS394, 395, 398). (Japan participated as a third-party country). In July 2011, a panel report was issued, which stated that China's quantitative restriction on exports and China's export tariffs are not consistent with the WTO agreements. Although China appealed in August 2011, at the end of January 2012, the Appellate Body report was made public. It supported most of the conclusions of the panel. The RPT (Reasonable Period of Time for implementation) for the case was set by December 31, 2012. As of January 2013, export tariff on six items (bauxite, coke, fluorite, magnesium, manganese, silicon metal) were eliminated and the tariff rates of yellow phosphor and zinc were changed to the range stipulated in the Accession Protocol. In addition, the quantitative restrictions on export on bauxite, coke, fluorite, silicon carbide and zinc were abolished.

In March 2012, Japan, jointly with the United States and EU, requested WTO consultations with regard to China's export restriction measures (quantitative restrictions on exports, export tariffs and a minimum export price) on rare earths, tungsten and molybdenum. However, the consultations failed to settle the dispute, and so in July 2012 the three countries requested establishment of a panel. A panel (DS431, 432 and 433) was established on July 23 2012, and a panel report, which fully upheld the claims of Japan, the United States, and the EU that China’s export restrictions (export duties, quantitative export restrictions, and restrictions on rights to trade) on rare earths, tungsten, and molybdenum violated GATT and China’s WTO Accession Protocol, was released on March 26, 2014. China objected to the Panel’s decision and appealed to the Appellate Body in April of the same year, but an Appellate Body report, which fully supported the Panel’s decision, was released in August of the same year. The Panel report and the Appellate Body report were both adopted at the DSB meeting in the same month. In response, China lifted the quantitative export restrictions on rare earths, tungsten, and molybdenum on January 1, 2015 (these items are deleted from the 2015 list of items covered by quantitative export restrictions announced on December 31, 2014).

Furthermore, on October 13, 2016, the United States requested the establishment of a panel on export regulatory measures (export duties, export volume limitations, etc.) for antimony, indium, chromium, cobalt, copper, graphite, lead, magnesia, talc, tantalum and tin (DS508).

**RIGHT TO TRADE (APPROVAL SYSTEM FOR TRADING)**

<Outline of the Measure>

When China acceded to the WTO, any person who intended to engage in trade operations needed to obtain the approval of the State Council, but China made a commitment in the Protocol of Accession to
progressively eliminate its system of examination and approval of foreign trading rights within three years after accession. Based on this commitment, in July 2004, the “Foreign Trade Law,” which is China’s supreme law on foreign trade, was revised for the first time in 10 years and implemented. As revised, only registration is required for foreign trade operations; the application and approval process has been abolished, but only state-owned enterprises authorized by the State Council under the Council's ordinance concerning control on publications are allowed to import publication (i.e. books, newspapers, magazines, audio-visual products).

<Problems under International Rules>

Under Article 5 of China's WTO Accession Protocol, the country is due to: (1) grant all domestic companies rights to trade concerning all goods (except for some agricultural products) within three years after accession; and (2) provide fair treatment to all foreign people and companies compared with domestic companies. Therefore, the import restriction on publications is deemed inappropriate.

<Recent Developments>

In April 2007 the United States requested consultations with China pursuant to the WTO on the import and distribution restrictions pertaining to copyrighted works. The consultations did not reach a resolution, and a panel was established at the WTO Dispute Settlement Body (DSB) in November 2007 (with Japan and the EU participating as third-party participants). For its accession to the WTO, China had promised that it would recognize the right of foreign companies to engage in importing and distribution operations related to publications (books, newspapers) and audio-visual products (DVDs) within three years of its accession. Yet, China continued to limit those engaged in this business to Chinese state-run companies and companies in which China maintains the majority of capital, a fact which the United States viewed as problematic.

A Panel report issued in August 2009 found China’s measure to be inconsistent with the WTO Agreement, accepting most of the US assertions. China appealed this to the Appellate Body in September 2009, but in December 2009 the Appellate Body upheld the Panel’s conclusion in full, except with respect to certain points, and China’s violation of the obligation under the Agreement became final and conclusive (China is under an international obligation to rectify the measure). The time limit for complying with the DSB recommendations was set to March 19, 2011. Meanwhile, in the “Catalogue for the Guidance of Foreign Investment Industries (Amended in 2011)” (promulgated on December 24, 2011, and effective on January 30, 2012), which provides for policies concerning investment activities of foreign companies in China, the National Development and Reform Commission, the Ministry of Commerce removed importation of books, newspapers, magazines, audio-visual products and digital publications from the list of prohibited foreign investment industries. Since they no longer are included in the list of restricted foreign investment industries, they are now considered as accepted foreign investment industries; but it may require close monitoring of implementation hereafter to ensure that they no longer are restricted.

(The Catalogue for the Guidance of Foreign Investment Industries (Amended in 2015), which came into effect April 10, 2015, as well as a public comment published on December 7, 2016, do not include the importation of books, newspapers and magazines, audio-visual products, or electronic publications in the categories of restricted or prohibited foreign investment industries.) Additionally, at the meeting of the WTO Dispute Settlement Body held on February 22, 2012, China announced that it had fulfilled the majority of the DSB’s recommendations, and that both the United States and China had reached a memorandum of agreement on February 19, 2012, to settle the dispute. According to the joint communication issued on May 9 of the same year submitted to the chairperson of the DSB, the memorandum includes: the importation of at least 14 titles of IMAX and 3D, high-definition films in addition to those 20 titles already within the frame of the annual distribution restrictions for foreign
Part I: Problems of Trade Policies and Measures in Individual Countries and Regions

films; raising profit distribution for film producers to 25%; allowing private enterprises to enter the market of foreign film distribution; and the holding of a conference between the United States and China in five years (2017) regarding the major elements of the memorandum to discuss issues about China’s DSB recommendations. At the meeting of the WTO Dispute Settlement Body held on May 24, 2012, China declared that all DSB recommendations had been fulfilled, but the United States, on the other hand, said that the memorandum agreed between the US and China constituted important progress but was not a final, complete resolution.

The United States has announced that it will continue to monitor this situation.

Japan continues to follow the development of this situation between the United State and China, and make efforts to further ease restrictions on foreign investment via bilateral policy discussions.

TARIFFS

(1) Tariff Structure

*This particular case was included in light of the following concerns despite it being a trade or investment policy or measure that does not expressly violate the WTO Agreements or other international rules.

<Outline of the Measure>

Upon accession to WTO, following negotiations with Japan, the United States and the EU, as well as within the Working Party, China submitted a schedule of tariff concessions which reduced tariffs on a broad range of items.

China committed to reduce the tariff rate on all bound items (7,151 items) and the simple average tariff rate of 13.6% (at the time of accession in 2001) to 9.8% by 2010. The reduction was scheduled to be conducted, from 19.3% to 15% on agricultural products (977 items) and from 12.7% to 8.9% on mining products (6,174 items).

In addition, China joined the Information Technology Agreement (ITA) and committed to reduce tariffs on almost all chemicals and chemical products to the harmonized level.¹

<Concerns>

From January 1, 2002, by an amendment to the Tariff Law, China reduced tariffs on 73% of all bound items (over 5,300 items). On January 1, 2008, China released the seventh revision of its tariff schedule since accession, and as a result its simple average tariff has been reduced to 15.2% for agricultural products, 8.9% for non-agricultural products and 9.8% in total.

China's current binding coverage on all products is 100%. The average bound rate for non-agricultural products is 9.2% and the average applied tariff rate is 8.7%.

For some items, though, the final bound tariff rates remain still high, such as photographic films (up to 47%), motorcars (25%), television reception apparatus (30%), monitors (30%), motor cycles (up to 45%), and projectors (30%).

¹ The Chemical Tariff Harmonization Agreement established tariff reductions on chemicals and chemical products (in principle HS 28~39; final tariff rates of 0~6.5%) for participating countries, including Japan, the United States and the EU. This was agreed to as a part of the tariff negotiations during the Uruguay Round.
With regard to China’s commitment to participate in the Information Technology Agreement (ITA), its participation was approved by the WTO ITA Committee in April 2003. There remain some concerns on its implementation of ITA, for example, China imposes multifunction machines or projectors that are peripherals for computers.

<Recent Developments>

Negotiations regarding market access for non-agricultural products are ongoing in the Doha Round negotiations; they include negotiations on reducing and eliminating tariff rates.

In addition, with the aim of increasing the number of items subject to elimination of tariffs on IT products, ITA expansion negotiations launched in May 2012 outside the Doha Round negotiations, and an agreement was reached in December 2015. Elimination of tariffs on 201 items started gradually in July 2016, and elimination of approximately 90% of tariffs on the subject items is planned to be completed by July 2019. By January 2024, tariffs on all 201 items will have been completely eliminated for 54 members (see 2. (2) “Information Technology Agreement (ITA) Expansion Negotiation” in Chapter 5 of Part II for details). As for China, elimination of tariffs on the subject items started in September 2016. For example, high tariff items for which tariffs are to be eliminated by China include digital video cameras (35%), recorders and players (30%), television receivers (30%), etc. Tariffs on all subject items including the above items will be eliminated gradually and will have been completely eliminated by 2023.

Note: The implementation period of the schedule of tariff concessions is until July 1, 2006, for most of the items.
Reference: Items for which the implementation period is set beyond July 2006:
- Terephthalic acid, certain dyes, certain cosmetics, polyethylene, propylene, styrene, vinyl chloride, polyester/polyether, poliamide, polyurethane, plastic scrap, certain plastic tubes, and certain plastic plates/sheets: until January 1, 2008
- Certain fruits and fermented fruit liquor, and certain synthetic fibers: until January 1, 2010

(2) Violation of Bound Tariff Rate on Photographic Roll Films, etc.

<Outline of the Measure>
In some cases, China has imposed non-ad valorem duties on items that were subject to concessions with ad valorem duties at the time of its accession to the WTO. For example, non-ad valorem duties at the applied tariff rate of 67 yuan per square meter are imposed on some photographic films (tariff code: 37023190), for which the bound tariff rate is 40%; the equivalent average ad valorem tariff rate calculated based on the export volumes for the last few years is approximately 47-75% and thus exceed the bound tariff rate.

<Problems under International Rules>
This may violate GATT Article II because non-ad valorem duties that are imposed on items subject to concessions with bound ad valorem duties at the equivalent ad valorem tariff rate are higher than the
bound tariff rate.

<Recent Developments>

In October 2013, Japan requested relevant Chinese authorities to switch to ad valorem duties at a rate consistent with the bound tariff rate, or to set an upper limit not to exceed the bound tariff rate in case non-ad valorem duties were retained. In response to this, the tariff rate of the films was reduced to 56 yuan per square meter in the 2014 revision of Chinese tariff rates, which was made public in December 2013. The equivalent ad valorem tariff rate calculated based on exchange rates and prices of films in 2013 fell to approximately 40-42%, almost the same level as the bound tariff rate, but it may still exceed the bound tariff rate depending on trends in exchange rates and product prices. Japan will therefore continue to pay close attention to this issue.

In 2011, non-ad valorem duties at the rate of 15 yuan per square meter were imposed on photosensitive dry films for printed circuit boards (tariff code: 37013029), which were subject to concessions with ad valorem duties at 10%. The equivalent ad valorem tariff rate calculated based on exchange rates and film prices at the time was approximately 22%, so there was a possibility of violation of the bound tariff rate. Japan requested that China remedy this problem, and this resulted in the Chinese government switching non-ad valorem duties to ad valorem duties at the same rate as the bound tariff rate of 10%.

Furthermore, in the 2014 revision of tariff rates, non-ad valorem duties were raised from 1.8 to 10 yuan per square meter for certain phototypesetting films (tariff code: 37024321). This corresponded to an equivalent ad valorem tariff rate of 40%, which was in violation of the bound tariff rate. As before, Japan requested China to remedy the situation, and in response, the duties were revised to ad valorem duties at the same rate as the bound tariff rate of 10% in the 2015 revision of tariff rates. Japan will therefore pay close attention to future developments and request relevant Chinese authorities to remedy the situations where necessary.

ANTI-DUMPING AND COUNTERVAILING MEASURES

COMMITMENTS UPON ACCESSION

Upon accession, China committed to bring its regulations and procedures on anti-dumping and countervailing measures into conformity with the Anti-Dumping (AD) Agreement and the Agreement on Subsidies and Countervailing Measures.\(^2\)

Additionally, when another WTO Member conducts an investigation in relation to anti-dumping measures on Chinese products and performs price comparisons (calculation of margins of dumping), that member is allowed to compare export prices with sales prices of an appropriate third country instead of China’s domestic sales prices (Article 15 of China’s WTO Accession Protocol). The idea behind this is that China is not yet a market economy and there are no appropriate domestic sales prices. Article 15 of China’s WTO Accession Protocol provided a basis for the above arrangement, but subparagraph (a)(ii) of that article expired in December 2016, when 15 years after the accession of China. After the special treatment expired, the issue of China’s market economy status became an issue of international debate. For details, see “Feature Article: Use of sales prices of a third country in relation to anti-dumping duties imposed on China (what is known as the issue of China’s Market Economy Status)” on page 320.

---

\(^2\) China’s Accession Protocol (WT/L/432)
STATUS OF IMPLEMENTATION OF AD INVESTIGATIONS

<Outline>

Between 1995 and 30 June 2016, China initiated investigations in 231 cases, among which, 43 cases involve Japanese products as targets of the AD measures. Of these 43 cases, AD measures were imposed in 32 as a result of final determinations. Anti-dumping duties have been continued to be imposed in 19 of these cases (see reference data attached at the end of Part II Chapter 6 Anti-Dumping Measures).

<Problems under International Rules>

In light of the Anti-Dumping Agreement, there remain problems. It is necessary to continue to seek further improvement in the following areas:

IMPROVEMENT OF THE DETERMINATION OF INJURY AND CAUSATION

A. When determining injury to the domestic industries caused by dumped imports and a causal relationship between them, the Chinese authority must properly examine and assess the existence and the level of competitive relationship and substitutability between the imported products and the domestic products while taking into account differences in the models, grades, uses, etc. of the specific imported and domestic products (Articles 3.1, 3.2, 3.4, and 3.5 of the AD Agreement).

B. Chinese authority must properly assess the impact on domestic industries caused by factors other than dumped imports in determining injury (and a causal relationship). It should provide adequate explanation of its method of analysis of the effects after it “separates” and “distinguishes” the effects caused by dumped imports and other factors (Articles 3.1, 3.2, and 3.5 of the AD Agreement).

IMPROVEMENT OF PROCEDURES

A. In order for the interested parties to defend their interests, the Chinese authority must provide a full explanation of the reasons and the methodologies used in calculating the margin of dumping, and indicate the source of the facts available used in it in its disclosure of the essential facts and final determination (Articles 6.9 and 12.2 of the AD Agreement).

B. In general, MOFCOM must calculate a dumping margin for each producer. When a sampling investigation is planned to be taken, MOFCOM should sufficiently examine whether the requirements set forth in Articles 6.10 and 6.10.2 of the AD Agreement are met. (For details, see [Individual Measures] (4) below).

<Recent Developments>

ACTIONS TAKEN AT THE WTO’S COMMITTEE AND SUBMISSION OF GOVERNMENT STATEMENTS IN EACH AD INVESTIGATION

At AD Committee meetings, Japan requested that China conduct appropriate investigations on the issues described above, expressed the opinions of the Japanese government and submitted government statements in individual AD investigation procedures by attending the public hearing.

UTILIZATION OF DS PROCEDURES

As described below, in the case on Japanese high-performance stainless steel seamless tubes in 2012,

---

3 https://www.wto.org/english/tratop_e/AD_InitiationsVsExpCty.pdf
Japan initiated a WTO dispute settlement proceeding regarding AD measures and problems in the implementation of AD (particularly determinations of injury and causal relationship) by China. Regarding this case, the Appellate Body report released in 2015 upheld all of Japan’s claims. (For details, see [Individual Measures] below.)

**INDIVIDUAL MEASURES**

(1) *AD Measures on Japanese High-Performance Stainless Steel Seamless Tubes*

**<Outline of the Measure>**

In September 2011, upon request of the domestic industry, the Chinese authority initiated an AD investigation into the importation of high-performance stainless steel seamless tubes from Japan and the EU. In November 2012, the Chinese government made a final determination imposing AD duties on these products on the basis of dumping as well as injury to the domestic industry caused by the dumped imports.

**<Problems under International Rules>**

China’s AD measures may be inconsistent with the AD agreement because, in this case, there are possible flaws in the investigation procedure such as insufficient facts in the public notice of the final determination and in the determination of injury to the domestic industry caused by dumped imports.

**<Recent Developments>**

**BACKGROUND OF ESTABLISHMENT OF A WTO PANEL**

At the WTO AD committee meetings held in autumn 2011, spring and autumn 2012, Japan indicated that the majority of products exported from Japan do not compete with Chinese products because they were high-grade products used in supercritical boilers in coal-fired power plants whereas Chinese products were lower in performance and grade and, therefore did not cause injury to the domestic industry. Japan strongly demanded appropriate determinations be made taking the opinions of Chinese users of those Japanese products into account. Since then, Japan has made efforts to resolve this case in consultations with the Chinese government, requesting exclusion of Japanese products from the scope of the investigation scope. However, China made the AD measures as mentioned above and a resolution was not reached. In December 2012, Japan requested consultations with China under the WTO Agreement regarding the AD measures (DS454). In addition, Japan also raises issues concerning individual AD investigation procedures by China at the AD Committee meetings in April and October of 2012 and April and October of 2013. Japan requested the establishment of a panel (DS454) in April 2013, and the panel was established in May. The EU also requested consultations under the WTO Agreements in June 2013 (DS460) and requested the establishment of a panel in August of the same year; it was established in the same month.

**DETERMINATION BY THE PANEL AND THE APPELLATE BODY**

A Panel report (WT/DS454/R, WT/DS460/R) released in February 2015 determined that China’s decision to implement the measures was inconsistent with the AD Agreement in regard to the determinations of injury and causal relationship because (i) in the examination of causal relationship (Article 3.5 of the AD Agreement) China did not examine the presence or absence, and the level of, substitutability of the imported products and the domestic products in spite of the fact that most of China’s domestic products were lower in grade than the imported products and their prices differed substantially, and it failed to provide a sufficient explanation about the mechanism whereby dumped imports caused injury to the domestic industry. With respect to procedures, treatment of confidential...
Part I: Problems of Trade Policies and Measures in Individual Countries and Regions

information and disclosure of the essential facts, etc. also were determined to be inadequate. Meanwhile, (ii) the report held that strict examination of the impact of dumped imports on the prices of domestic products and the domestic industry was not required. With regard to the examination of whether the dumped imports were undercutting the prices of domestic products (Articles 3.1 and 3.2 of the AD Agreement) in the analysis of price effects, it is sufficient to demonstrate that the prices of imported products of a certain grade were lower than the prices of domestic products at a certain point of time during the investigation period and there is no need to examine the actual impact of the imported products on the prices of domestic products. (iii) With regard to the examination of the state of the domestic industry (Articles 3.1 and 3.4 of the AD Agreement), it is sufficient to judge whether the performance of the domestic industry has deteriorated, and there is no need to examine the relationship between the deterioration of performance and the dumped imports or take into account the differences in grades of the imported products and the domestic products.

Japan appealed to the Panel’s decision to the WTO Appellate Body seeking confirmation of the determination on (i) above and claiming that: with regard to (ii) above, a price effects analysis requires not only formal and superficial examination of whether price undercutting is observed, but dynamic analysis that also takes into account the differences in grades of the imported products and the domestic products: and with regard to (iii) above, it is not sufficient to merely determine whether the performance of the domestic industry has deteriorated, but the relationship between the changes in performance and the dumped imports should be examined, while taking into account the differences in grades of the imported and domestic products.

In October 2015, the Appellate Body report (WT/DS454/AB/R, WT/DS460/AB/R) was released. The Appellate Body upheld all of Japan’s claims concerning (i) through (iii) above, and recommended China to make the measures compliant with the AD Agreement. The report was adopted along with the Panel report in November of the same year. On August 22, 2016, China announced its intention to eliminate AD measures in accordance with the recommendation. Japan will continue to monitor closely China’s actions so that it does not implement AD measures that are not consistent with the WTO Agreement.

(2) Implementation of Sampling Investigations Inconsistent with the AD Agreement
(AD Measures on Japanese Optical Fiber Preform and Japanese Acrylic Fiber)

<Outline of the Measure>

Upon applications by relevant domestic Chinese companies, the Chinese government initiated an AD investigation into optical fiber preform imported from Japan and the United States, and initiated an AD investigation into acrylic fiber imported from Japan, the Republic of Korea, and Turkey.

<Problems under International Rules>

As a general rule, Article 6.10 of the AD Agreement provides that an individual margin of dumping shall be determined for each known exporter or producer concerned of the product under investigation. As an exception, where the number of producers, etc. concerned is so large as to make such a determination impracticable, an investigating authority may limit its examination either to a reasonable number of interested parties by using samples which are statistically valid (sampling). However, in the AD investigations for the two cases in question, the Chinese investigating authority conducted sampling investigations in spite of the fact that only four Japanese companies were respondents. There is concern that this is inconsistent with the above-mentioned provisions.

The AD Agreement also provides that, when a sampling investigation is conducted, an individual margin of dumping shall nevertheless be determined for any producer, etc. not initially selected as part of the sample that voluntarily submits information, except in cases where individual examinations would
be unduly burdensome to the authorities (Article 6.10.2 of the AD Agreement). Therefore, when a sampling investigation is conducted, it is necessary to closely watch not only the consistency with Article 6.10 of the AD Agreement which provides for the requirements for sampling investigations, but also whether an individual margin of dumping is determined for a producer, etc. that satisfies the requirements set forth in Article 6.10.2 of the AD Agreement.

<Recent Developments>

With regard to the AD investigation into Japanese optical fiber perform, the Japanese government submitted a statement on the sampling investigation in the AD investigation to the Ministry of Commerce of the Chinese government in September 2014, and at the meeting of the WTO Anti-Dumping Committee held in the fall of 2014, Japan requested China to make a careful judgment considering that the sampling investigation in this case is inconsistent with Article 6.10 of the AD Agreement, as well as for other reasons. The final determination to levy duties was made on August 19, 2015. An individual margin of dumping was not determined for producers, etc. not subject to the sampling investigation who satisfied the requirements set forth in Article 6.10.2 of the AD Agreement.

The Japanese government also submitted a statement in November 2015 to the Ministry of Commerce of China concerning the sampling investigation in the above-mentioned AD investigation regarding Japanese acrylic fiber. However, as with the case of optical fiber preform, an individual margin of dumping was not determined for producers, etc. not subject to the sampling investigation who satisfied the requirements set forth in Article 6.10.2 of the AD Agreement.

In the future, Japan needs to closely watch whether an individual margin of dumping is determined for producers, etc. who satisfy the requirements set forth in Article 6.10.2 of the AD Agreement when a sampling investigation is conducted in an AD investigation in China.

(3) AD Measures on Japanese-Made Polyvinylidene Chloride (PVDC polymer)

<Outline>

In April 2016, upon the request of the domestic industry, the Chinese government initiated an AD investigation into the importation of polyvinylidene chloride from Japan. In January 2017, the Chinese government made a preliminary determination that there was dumping as well as injury to the domestic industry caused by the dumped imports.

<Problems under International Rules>

Article 3.1 of the AD Agreement provides that in determination of injury to a domestic industry, the investigating authorities shall perform an objective examination based on positive evidence with regard to the volume of dumped imports and the effect of dumped imports on prices in the domestic market for like products (volume effect and price effect). In examining the price effect, the investigating authorities shall consider whether there has been significant price undercutting by the dumped imports or whether the effect of such imports is to depress prices or prevent price increases. In this regard, the WTO Appellate Body has determined that the investigating authorities shall consider whether the subject imports has explanatory force for the occurrence of significant depression or suppression of domestic prices\(^6\), and that Article 3.2 of the AD Agreement requires a dynamic assessment of price developments and trends in the relationship between the prices of the dumped imports and those of domestic like

\(^6\) Appellate Body, China – GOES, para. 136. (WT/DS414/AB/R)
Part I: Problems of Trade Policies and Measures in Individual Countries and Regions

products over the entire period of investigation. However, in the preliminary determination for the case at issue, no dynamic analysis of price developments and trends was performed, as exemplified by the fact that in analyzing decreases in prices there was no comparison of prices of domestic products with those of investigated products.

In addition, the preliminary determination fails to provide reasonable grounds to support the determination that imports of investigated products caused damage to the domestic industry. In fact, there was a violation of Articles 3.1 and 3.2 of the AD Agreement since during the period of the injury investigation the absolute or relative volume of investigated products decreased while the market share of domestic products continued to grow. There was no adequate explanation about how imports of investigated products had an impact on the domestic industry in this case since the production capacity of Chinese domestic producers increased significantly in the context of an increase in China’s domestic demand, and the market share of investigated products decreased while the market share of domestic producers continued to grow (violations of Articles 3.1, 3.4 and 3.5 of the AD Agreement).

<Recent developments>

The Japanese government participated in a public hearing held in November 2016, pointing out its concern that the investigation was not consistent with international rules. It requested the Chinese government to conduct careful investigations. Furthermore, in February 2017 after the preliminary determination, Japan submitted a government statement, pointing out the problems mentioned in the above “Problems under International Rules”. Japan will continue to monitor closely China’s actions so that a final determination in the investigation is made in accordance with the WTO Agreement.

SUBSIDIES

COMMITMENTS UPON ACCESSION

Upon accession, China committed to eliminate export subsidies and subsidies favoring the use of domestic over imported products stipulated under Articles 3.1(a) and 3.1(b) of the Agreement on Subsidies and Countervailing Measures (ASCM). China reserved rights to apply each of the provisions of Article 27.10, 27.11, 27.12, and 27.15 of the ASCM, which provides for special treatment given to developing countries, and committed not to seek application of the provisions of Article 27.8, 27.9, and 27.13 of the ASCM, which also provide for special treatment.

China committed not to maintain or to introduce any export subsidies on agricultural products. Further, some subsidies, which under the Agreement on Agriculture developing country members may exempt from domestic support reduction commitments (Article 6.2), would be subject to China’s reduction commitments. China also committed to implement a de minimis exemption figure, the ceiling for subsidies which would normally be subject to reduction but can be exempted due to the small amount of the subsidy, of up to 8.5 percent of the value of China’s total agricultural production (in the Agreement the de minimis exemption percentage is up to 5 percent for developed countries and up to 10 percent for developing countries).

NOTIFICATION OF SUBSIDIES AND PROBLEMS

There is an obligation in the ASCM to submit a detailed notification on subsidies every second year, and notified subsidies are reviewed at Subsidies Committee meetings. However, the first notification China submitted after its accession in 2001 was in April 2006, and no notification was submitted thereafter for years. Although the United States had previously reported previously about subsidies by local governments, it reported about them for the first time in 2007, whereas China’s notification on subsidies is insufficient at Subsidies Committee meetings.

In addition, the United States made a second counter-notification regarding nearly 100 Chinese subsidies in February 2007 the US and Mexico requested consultations, claiming that the Chinese subsidies system brought up in the WTO dispute settlement proceedings by January 1, 2008. As a result, the review by the

NOTIFICATION OF SUBSIDIES AND PROBLEMS

There is an obligation in the ASCM to submit a detailed notification on subsidies every second year, and notified subsidies are reviewed at Subsidies Committee meetings. However, the first notification China submitted after its accession in 2001 was in April 2006, and no notification was submitted thereafter for years. Although the United States had previously reported previously about subsidies by local governments, it reported about them for the first time in 2007, whereas China’s notification on subsidies is insufficient at Subsidies Committee meetings.

In addition, the United States made a second counter-notification regarding nearly 100 Chinese subsidies in February 2007 the US and Mexico requested consultations, claiming that the Chinese subsidies system brought up in the WTO dispute settlement proceedings by January 1, 2008. As a result, the review by the
submitted after its accession in 2001 was in April 2006, and no notification was submitted thereafter for a while. This caused the member countries to express their serious concerns. In particular, in October 2011, the United States, claiming that China had not properly notified nearly 200 measures to the Subsidies Committee although it seriously encouraged China to notify, countered this by bringing the alleged subsidies to the notice of the Committee, as provided by Article 25.10 of the ASCM. Immediately after this, China submitted its second notification since accession to the WTO. The United States, however, responded that the contents of China's notification were not sufficient to comply with the requirements of the ASCM, as it only covered the period between 2005 and 2008, and subsidies by local governments were not included, etc., and has held informal bilateral consultations with China. In addition, the United States made a second counter-notification regarding nearly 100 Chinese subsidies in accordance with Article 25.10 of the ASCM in October 2014, and then continues to repeatedly express its concern that China's notification on subsidies is insufficient at Subsidies Committee meetings.

China submitted its third notification in October 2015. Japan will cooperate with the United States in requesting that China ensure transparency in that report as well. In addition, although China had not reported previously about subsidies by local governments, it reported about them for the first time in July 2016. Japan will continue to cooperate with other countries in requesting China to ensure transparency with regard to subsidies by the central government and local governments.

The member countries expressed their concerns regarding the consistency of the subsidies notified by China with the WTO Agreements. Japan, the US, the EU and others questioned whether the notified subsidies were compatible with the ASCM at the October 2006 meeting of the Committee on Subsidies. In particular, subsidies notified by China included those that appeared to be subsidies prohibited by the ASCM, i.e., export subsidies and subsidies contingent on the use of domestic over imported goods, which China had pledged to remove upon its accession to the WTO. Japan therefore requested clarification of the content of subsidies by asking questions, etc. However, China repeatedly insisted that its subsidy system was in accordance with the WTO. China only provided a general overview and rough explanation of its subsidy system, and concrete data has not been provided.

China's subsidies also have been challenged in WTO dispute settlement Proceedings. In February 2007 the US and Mexico requested consultations, claiming that the Chinese subsidies system notified to the WTO (the majority of which were tax breaks as part of preferential measures for foreign capital) included export subsidies and subsidies contingent upon the use of domestic over imported goods, prohibited by the ASCM. Japan, the EU and Australia requested participation in this consultation as third parties (DS358, 359).

Following the request for consultations, the Chinese Government revised its corporate income tax law (enacted on January 1, 2008) and has undertaken a full-scale review of its preferential tax treatment for foreign capital. Furthermore, it has also abolished its low-interest loan program which was conditional upon export. However, the content that was changed in the administrative instructions consequent upon the revision to the corporate income tax law are unclear, and there are concerns that grandfathering provisions still remain. Because of this, a panel was established in August 2007 based upon the requests from the United States and Mexico.

In November, China committed, in a memorandum with the US and Mexico, to repeal the subsidies brought up in the WTO dispute settlement proceedings by January 1, 2008. As a result, the review by the panel on this issue terminated.

In December 2010, the United States submitted a request for consultations pursuant to WTO agreements on the grounds that subsidies for wind power generation equipment provided by the Chinese Government are subsidies contingent upon the use of domestic over imported goods, which are prohibited under the ASCM (DS419). As a result of the bilateral discussions between the United States
Part I: Problems of Trade Policies and Measures in Individual Countries and Regions

and China, the United States announced that China had abolished the subsidies at issue in June 2011, and the dispute has been settled.

In addition, on February 13, 2015, the United States claimed that the “Demonstration Base/Common Service Platform program” implemented by the Chinese Government provides free services and subsidies, etc. to exporting companies that reside in the site and requested consultations (DS489). Japan also requested participation as a third party in the consultations. A panel was established in April of the same year, and Japan has participated in the panel procedure as a third party.

Furthermore, the United States requested consultations in December 2015 claiming that, while China exempts domestically produced aircraft from the value-added tax (VAT), it imposes the VAT on imported aircraft, and such taxation measure is in violation of the national treatment, etc. under GATT. (DS501). In January 2017, the United States requested consultations regarding subsidies by China on primary aluminum (DS519).

For its part, Japan will work together with other member countries in continuing to make requests of the Chinese side through the WTO Subsidies Committee and bilateral consultations in order to ensure that China adheres to the commitments it made at the time of its accession, and that China’s system is applied in a manner that is consistent with the WTO Agreement on Subsidies and Countervailing Measures.

SAFEGUARDS

Regulations on Safeguards

<Outline of the Measure>

In October 2001, China adopted regulations on safeguards that incorporate basic rules of its safeguard measure under the Foreign Trade Law; it took effect in January 2002. After that, four detailed regulations (considered “by-laws”) relating to the investigation procedure were also enacted for the implementation of the regulations. In addition, related amendments to the Foreign Trade Law were also enacted in July 2004.

<Problems under International Rules>

Japan believed that some parts of this legal framework were inconsistent with the Agreement on Safeguards. In addition, the preliminary and final safeguard measures on steel products applied in April 2002 were also questionable in terms of consistency with the WTO agreements. Specifically, provisions in these regulations concerning the existence of unforeseen circumstances, provision of compensatory measures, and public hearing procedures, etc. do not appear to be consistent with GATT and the Agreement on Safeguards.

<Recent Developments>

In 2006, in the Committee on Safeguards, Japan questioned the consistency of a Chinese provision for countermeasures under Article 31 of the Chinese regulations on safeguards with the WTO agreements, as well as certain matters concerning China’s legal framework (unforeseen developments, securing of public interests when applying safeguard measures, clarifying the provisions of compensation and lack of a moratorium provision). The Chinese Government responded that China's legal framework is fully consistent with the WTO agreements and that (even though there is no explicit provision) the Chinese authority implements its investigations in an appropriate manner in accordance with the WTO
agreements and its domestic laws.

Japan believes that it is necessary to continue to seek adequate explanations from China and keep a close watch on its future implementation on safeguards with regard to their consistency with the WTO agreements.

**TRADE-RELATED INVESTMENT MEASURES (TRIMS)**

**COMMITMENTS UPON ACCESSION**

China committed to comply fully with the TRIMs Agreement upon accession. China also made commitments above and beyond the TRIMs Agreement regarding the trade-related conditions imposed on foreign investment. To that end, China agreed to eliminate all measures prohibited in the TRIMs Agreement. For example, China agreed to eliminate local content requirements (mandating the use of designated percentages of locally-produced items), which are in violation of GATT Article III, and foreign-exchange balancing requirements (permission to import raw materials and capital goods only in proportion to export earnings and volumes), which are in violation of GATT Articles III and XI. In addition, China also agreed to eliminate export performance requirements, transfer of technology, or any other performance requirements on the permission or rights for import and investment.

In other areas China will maintain a category-by-category approval system for authorizations for motor vehicle producers. However, within two years after accession, China committed to eliminate restrictions on the categories, types and models of vehicles permitted for production, and to raise the limit within which investments in motor vehicle manufacturing could be approved at the provincial government level. At accession, the level of investment was set at $30 million, but China agreed to raise the level to $60 million one year after accession, to $90 million two years after accession, and to $150 million four years after accession. Finally, China committed to removing the 50 percent foreign equity limit for joint-ventures regarding the manufacture of motor vehicle engines.

**IMPLEMENTATION STATUS AND PROBLEMS UNDER INTERNATIONAL RULES**

From October 2000 to July 2001, in line with the above commitments, China amended the Law on Foreign Capital Enterprises applicable to 100-percent foreign-owned companies. China also amended the Law on Chinese-Foreign Contractual Joint Ventures, applying to joint ventures where equity participation by all parties is not required but is determined pursuant to the joint venture contract, as well as the Law on Chinese-foreign Equity Joint Ventures, applicable to joint ventures where equity participation by all parties is required. The administrative instructions of all three laws were modified and wording pertaining to export requirements, local content requirements, and foreign-exchange requirements was amended or deleted. In addition to the above three foreign investment laws, the new “Company Law,” which was amended and implemented in January 2006, applies to foreign-owned companies.

The three foreign investment laws were partially amended in September 2016. As a result, matters that were previously subject to examination/approval now are managed through notifications.

On January 19, 2015, the Ministry of Commerce released the Foreign Investment Law of the People’s Republic of China (Exposure Draft), integrating the three foreign investment laws, and making amendments such as achieving consistency among related laws and regulations, including the Company Law. It invited public comments until February 17, 2015. However, no progress has been made and the
Part I: Problems of Trade Policies and Measures in Individual Countries and Regions

above law has not yet been promulgated. Although this law was not promulgated or came into effect as of January 2016, amendment of the three foreign investment laws (the Law on Chinese-Foreign Equity Joint Ventures, the Law on Foreign Capital Enterprises, and the Law on Chinese-Foreign Contractual Joint Ventures) was among the major matters of urgency mentioned in the 2015 Legislation Plan of the State Council released on April 13, 2015 (Guobanfa [2015] No. 28). The Chinese government considers the Foreign Investment Law as a law for (i) deepening the structural reform, (ii) further opening up the country to foreign businesses, (iii) promoting foreign investment, and (iv) making rules on foreign capital management.

Although the above-listed amendments have been made to bring domestic laws in China into conformity with the WTO Agreement, non-conformance with the Agreement and restrictive measures on investment still exist and should be rectified speedily. On July 1, 2009, in order to encourage development of the domestic automobile industry and energy saving measures, the Ministry of Industry and Information Technology implemented a “Rule controlling entry of new energy automobile manufacturers and products” and “Entry conditions and evaluation requirements for entry of new energy automobile manufacturers”, as alternatives to the above rule. The rules require entering manufacturers to establish research and development institutes and to disclose technological information on the new energy automobile to be produced, and Japan intends to continue to scrutinize it closely. In addition, the National Development and Reform Commission announced the “Temporary Provisions Controlling Entry of Newly-Established Pure Electric Automobile Manufacturers and Products” on November 26, 2014. After public comments were invited from November 26 to December 2, 2014, the Commission released the “Provisions Controlling Entry of Newly-Established Pure Electric Automobile Manufacturers and Products” on March 13, 2015, and public comments were invited again until March 28 of the same year. On June 4, 2015, the Commission promulgated the Provisions on Administration of Newly Established Pure Electric Passenger Vehicle Enterprises (Decree No. 27 of 2015), and the provisions came into effect on July 1, 2015. The purpose of enacting the policy was to remove industrial barriers and to have parties with superior technological capabilities in the market take part in competition in the electric passenger vehicle industry. While the scope of parties that can enter the industry was expanded, strict requirements were set for their research and development capabilities and innovation power.

The “Catalogue of the Guidance of the Foreign Investment Industry (Amended in 2015)” was promulgated by Circular No. 22 of the National Development Reform Committee and the Ministry of Commerce on March 10, 2015, and came into effect April 10, 2015. The amended Catalogue covers a total of 423 industries, which can be broken down into 349 encouraged foreign investment industries, 38 restricted foreign investment industries, and 36 prohibited foreign investment industries. In comparison to the 2011 version, the number of restricted foreign investment industries decreased from 79 to 38 and the number of prohibited foreign investment industries from 38 to 36. The restricted and prohibited categories specified in the Catalogue (2015 revised edition) are as outlined in Figure 1-1-5. (It should be noted that on December 7, 2016, public comments were invited regarding the 2015 revised Catalogue).

STANDARDS AND CONFORMITY ASSESSMENT SYSTEMS

INDIVIDUAL MEASURES

(1) Information Security Regulations in China

Outline of the Measure

In May 2002, China introduced the Compulsory Certification system and items subject to that system are required to bear the CCC Mark. In January 2008, the Chinese Government announced that 13 IT security products (e.g., firewalls and smart card OS’s) had been added to the products subject to the compulsory certification system. Since certification of some items required the disclosure of source code, Japan responded by holding bilateral consultations with the Chinese Government and cooperating with the United States, the EU and the Republic of Korea in expressing concerns at TBT Committee meetings in 2008 and 2009. As a result of these efforts, the Chinese Government revised the measure and finally announced at the TBT Committee meeting in March 2010, etc. that the measure was applicable to government agencies but not to procurement by state-owned enterprises. The Chinese Government started operation of the measure as part of the national information security product certification system covering IT security products in May 2010.

The Chinese Government has been revising the compulsory certification system since 2013. For instance, revisions were made with regard to the certification process to rank manufacturing facilities; they allow the first facility inspection to be conducted after the certification if products are manufactured in superior facilities. Revisions were also made to allow registration of foreign capital certification/testing institutions on the condition that they are located in China.

In 1999, China promulgated the Regulations for the Administration of Commercial Encryption, which require the permission of the Office of the State Commercial Cryptography Administration (OSCCA) when importing/manufacturing/selling technologies and products for encrypting information that is not a national secret. In 2007, China also promulgated the information security Multi-Level Protection Scheme, in which the Ministry of Public Security of the Chinese Government categorizes IT security products used in systems related to four categories of communications, finance/railways/energy, government agencies, and national secrets into different grades (Grades 1 to 5) and requires the use of Chinese products as core components for Grades 3 to 5. Through these and other measures, China is moving ahead with the development of IT security regulations.

Problems under International Rules

In the compulsory certification system, it may take a long time for some factories located outside of China to acquire the CCC Mark. One of the reasons is that China does not permit the implementation of the initial factory inspection by a foreign Conformity Assessment Body (CAB). It is possible that these issues conflict with Article 6.4 of the TBT Agreement (which supports participation of foreign Conformity Assessment Bodies in domestic Chinese conformity assessment activities), Paragraph 195 of the Working Group Report on China’s accession (securing national treatment for foreign Conformity Assessment Bodies), Paragraph 342 of the same, and Article 1.2 of China’s Accession Protocol.

In addition, compulsory certification of IT security products, the Regulations for the Administration of Commercial Encryption and the information security Multi-Level Protection Scheme are more trade-restrictive than necessary in light of the policy objectives of the regulations, and so may violate TBT Article 2.2.
Part I: Problems of Trade Policies and Measures in Individual Countries and Regions

<Recent Developments>

A memorandum of understanding between Japan and China on cooperation in product safety, assessment, and standardization activities was signed in April 2007. This initiated a series of discussions between Japan and China for facilitation of the compulsory certification system. At present working-level consultations are being held to broadly exchange information on the systems of both countries and to discuss the administration of the compulsory certification system. Japan intends to continue holding consultations aimed at resolving issues relating to administration of the certification system.

As it was confirmed in March 2010 that compulsory certification of IT security products was being applied to government agencies, but not to procurement by state-owned enterprises, detrimental impact on Japanese industries has basically been eradicated. However, since November 2009, Japan, as well as the EU, also expressed its concerns at meetings of the TBT Committee regarding the Regulations for the Administration of Commercial Encryption and the information security Multi-Level Protection Scheme, in addition to the compulsory certification system of IT security products. Although at the TBT Committee meeting held in November 2016, China made clear it plans to revise the Regulations for the Administration of Commercial Encryption and the information security Multi-Level Protection Scheme, Japan will continue to pay close attention to developments regarding these information security regulations, and will request China to rectify any regulations that are more trade-restrictive than necessary.

(2) Security Regulation of Banking IT Equipment

<Outline of the Measure>

On September 3, 2014, the Chinese government (China Banking Regulatory Commission, National Development and Reform Commission, Ministry of Science and Technology, and Ministry of Industry and Information Technology) issued the “Advisory Opinion on Network Security and Informatization of Banking Industry through Application of Information Security Control Technologies”, providing that (1) the adoption rate of secure and controllable information technologies in the Chinese banking industry shall be raised to 75% by 2019 and (2) the network security auditing standards for the Chinese banking industry shall be established to strengthen security inspection of banking-specific information technologies and products.

Furthermore, in response to the Advisory Opinion, guidelines on information and communications technology related products and services used by banks, etc. requiring the use of Chinese domestic intellectual property rights-based products, evaluation/authentication based on the China-specific standards, and introduction of specifications that obstruct data distribution across borders, etc. were issued only to a small number of interested parties on December 26, 2014. A supplementary description of the guidelines, stating among other things that a “country-by-country discrimination” does not exist, etc. in relevant requirements, was subsequently published on February 12, 2015.

Although the Advisory Opinion and guidelines are likely to be a technical regulation on information technology products in the banking industry, not only was the TBT Committee not notified of either of them, but also public comment procedures have not been initiated. In addition, the Advisory Opinion and supplementary description of the guidelines have been published, but the guidelines, which are considered most important, have not.

<Problems under International Rules>

While the supplementary description of the guidelines published on February 12, 2015 states that related requirement do not make distinctions based on nationality, the unpublished guidelines are said to
include provisions that require the use of Chinese domestic intellectual property rights-based products. It is therefore necessary to carefully examine the Chinese regulation in the future and pay close attention to its operations.

If the use of products that use core technologies based on Chinese domestic intellectual property rights (owned by Chinese private citizens) is required, the security level required for the banking industry in China is not clear, and therefore the validity of the obligations (why the Chinese domestic intellectual property rights owned by Chinese private citizens / corporations, etc. are required) is unknown. In addition, depending on the content of China-specific evaluation/authentication, similar concerns arise over its validity. From the point of view of necessity and procedures for obtaining licenses for the Chinese domestic intellectual property rights owned by Chinese private citizens/corporations, etc., these obligations cannot be regarded as being based on legitimate regulations, and may violate Article 2.1 of the TBT Agreement, which obligates securing no less favorable treatment to products manufactured overseas when the terms are relatively disadvantageous to overseas vendors, etc. (principle of non-discrimination between domestically produced and imported products). In addition, these obligations may also violate Article 2.2 of the TBT Agreement if they are more trade-restrictive than necessary to fulfill a legitimate objective (security level necessary for banking industry in China).

This regulation has not been notified to the TBT Committee of this regulation, nor has been published. Therefore, it may violate Article 2.9.2 of the TBT Agreement, which obligates advance notification of proposed technical regulations, etc. to the WTO for comments, and Article 5.8 of that Agreement, which obligates WTO Members to immediately publicize, etc., all established technical regulations, etc.

<Recent Developments>

On March 3, 2015, five organizations in the information and communication equipment industry jointly submitted a statement to the Chinese government to express their concerns over this system. In addition, on March 13 of the same year, the Japanese government raised its concerns to the Chinese government. Moreover, at the TBT Committee meetings from March 2015 onward, Japan, the United States, the EU and Canada have jointly expressed their concerns regarding this matter. Consequently, the Chinese government postponed the enforcement of the guidelines and is currently reviewing their contents. Japan will continue to urge the Chinese government to correct the system, in cooperation with concerned countries/business operators, by utilizing the opportunities at bilateral consultations, various Committees including the TBT Committee, multilateral meetings, etc.

(3) Chinese Cybersecurity Law

<Outline of the Measure>

On November 7, 2016, the Chinese government announced the enactment of a new cybersecurity law that is intended to enhance cybersecurity. This law aims to preserve cyberspace sovereignty and national security. Includes new regulations concerning such matters as the establishment and operation of networks and the supervision of cybersecurity. Specifically, the bill (1) provides for the formulation of new national and industry standards concerning networking products and the like and the requirement for core networking products to obtain security authentication at the time of sale and provision, and (2) prescribes (i) the protection of personal information of citizens and (ii) the keeping of personal information and important information within China by operators of key information infrastructure (networks for public communication and information services, energy, transportation, irrigation, public services, and e-Government, etc.). Transfer of personal information, etc. out of China requires security evaluation) in order to ensure the security of network data in accordance with the advance of cloud computing, big data, and other technologies.
Part I: Problems of Trade Policies and Measures in Individual Countries and Regions

<Problems under International Rules>

The cybersecurity law prescribes that core networking products and products dedicated to cybersecurity must conform to relevant national and industry standards and obtain security authentication at the time of sale, so it is presumed that technical regulations and conformity certification procedures concerning products will be established. However, China has not submitted a notification under the TBT Agreement regarding regulations based on the law. Therefore, China appears to be in violation of Article 2.9.2 of the TBT Agreement, which requires prior notification of a proposed technical regulation, among other matters, to the WTO and solicitation of comments.

It should be noted that as the specifics of national and industry standards are not indicated in the law, it is unclear what form they will take. If these standards are not based on international standards or if the Chinese measure is more trade-restrictive in terms of standardization and authentication requirements than is necessary compared with the purpose of the measure, which is to preserve cyberspace sovereignty and national security, it may be in violation of Articles 2.4 and 2.2 of the TBT Agreement.

In addition, at the time of its accession to the WTO, China pledged not to restrict national treatment in many fields, including telecommunication services, financial services, and computer-related services. Therefore, if the definition of personal information, etc. held by operators of key information infrastructure is unclear and if data, including access data, are kept within China, it may raise marketing activity issues. When such data are transferred out of China, it may be in violation of the national treatment requirement under the GATS if regulation is exercised beyond the extent necessary for protecting personal information.

<Recent Developments>

On August 5, 2015 when the Cybersecurity Law was still a bill, six organizations in the information and communications-related industry submitted written comments to the Chinese government through the public comment procedure. At the same time, the Japanese government submitted a written comment to the Chinese government through the same procedure. In addition, four organizations in the information and communications-related industry and the Japanese government submitted written comments also through the public comment procedure in July 2016 when a draft law was released for a secondary review. However, since there are many cases in which the content of comments from the Japanese government and other parties was not reflected in the approved Cybersecurity Law, 41 industry organizations in Japan, the United States, Europe, etc. submitted written comments to the Chinese government on November 11, 2016. Japan also used bilateral consultations and other occasions to express its concerns over the Cybersecurity Law. Japan will continue to keep a close watch on developments related to the formulation of regulations under the law and call on China to remedy the situation.

(4) Measures for Controlling Pollution by Electronic Information Products

<Outline of the Measure>

Regarding six hazardous chemicals (lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyl (PBB) and polybrominated diphenyl ether (PBDE)), in accordance with the Measures for Controlling Pollution by Electronic Information Products, the Chinese government has, since March 2007, imposed obligations of (1) clearly indicating whether such chemicals are contained in electronic information products (radios, TVs, computers, and electronic products for households, etc.) and (2) requiring a conformity mark.

In July 2010, an amendment bill, the Bill of Measures for Controlling Pollution by Electric and Electronic Products, was published by the Chinese government. It expanded the subject products to
include electric products, and introduced a certification system (conformity assessment system) for restricting the use of six hazardous substances. Thereafter, an amendment bill was published twice in June 2012 and May 2015, and finally in January 2016, the Management Measures for Restriction of Hazardous Substances in Electrical and Electronic Products (hereinafter referred to as the “Amended Controlling Measures”) was promulgated. However, with regard to details of the restriction on use of hazardous substances and conformity assessment, the compliance management catalogue for restriction on use of hazardous substances in electrical and electronic products (Clause 17) and a conformity assessment system (Clause 18) are to be separately enacted and their details have not yet been made clear.

Thereafter, the Chinese government announced its policy of implementing the Amended Controlling Measures in two stages. More specifically, only the obligation of indicating the hazardous substances that were contained was applied from July 2016. The restriction on hazardous substances contained is to be applied after the compliance management catalogue (setting forth subject products, etc. containing hazardous substances) and the conformity assessment system (acceptability evaluation system) are established. (The timing of the implementation of the second step is yet to be determined).

<Problems under International Rules>

In July 2016, the obligation of indicating the hazardous substances that were contained started to be applied as the first step, but a FAQ list providing information on necessary procedures for responding to the regulations at issue and the details of the regulations was published approximately one and a half months before the start of application, so there were cases where companies did not have sufficient time to prepare themselves for the regulations.

At present, the Chinese government is moving forward with preparations for the introduction of the restriction on hazardous substances that are contained, which constitutes the second step, and is considering the scope of products subject to regulations and the specific details of the conformity assessment system. To avoid a situation where excessive regulations cause confusion among companies, posing an obstacle to trade, it is necessary for the Japanese government to continue to pay close attention to China’s actions so that opinions from companies and other parties are sufficiently heard beginning at the stage of formulation of drafts, reasonable and clear rules are developed, and enough time is allowed for companies to prepare themselves.

<Recent Developments>

Taking the opportunity of TBT Committee meetings starting in November 2015, Japan has requested China to (i) sufficiently hear opinions from companies and other parties, (ii) clarify regulated substances and the conformity assessment procedures, (iii) introduce self-declaration of conformity and (iv) set enough time for companies to prepare themselves. Japan needs to continue to urge China through the TBT Committee and other opportunities for various consultations to establish fair and open rules that do not pose an obstacle to trade, and to properly operate those rules.

(5) Regulations of New Cosmetic Ingredients

<Outline of the Measure>

China’s State Food and Drug Administration (SFDA, reorganized into the China Food and Drug Administration, CFDA, in March 2013) announced a “Declaration of acceptance of administrative licensing requirements on cosmetics” (hereafter referred to as the “Declaration”) in December 2009 (enforced in April 2010, TBT notification in March 2010). Due to this Declaration, cosmetic manufacturers and importers had to apply to the CFDA for a license and be evaluated prior to using new
cosmetic ingredients or importing cosmetics for the first time.

The CFDA announced a “Guideline for application and evaluation of new cosmetic ingredients” (hereafter referred to as the “Guideline”) in May 2011, as a guideline for application and evaluation of new cosmetic ingredients (enforced in July, TBT notification in June 2011). Definitions of new cosmetic ingredients, matters to be observed, application procedures, and the principle of valuation were clarified to a certain degree by the guideline.

Although five years have passed since introduction of this measure, there have been only four applications of the registry to new cosmetic ingredients from around the world so far, and this has had an adverse effect on the production and export of cosmetics containing new ingredients. Japan also has the following concerns regarding this measure.

According to (2), 2, II, Article 3 of the Guideline, new cosmetic ingredients must not be complex materials, which means that application and safety evaluation must be carried out on single materials. There are some plant extracts and fermentation liquids that are substantially difficult to be isolated into solvents and new substances and, even if isolated, possibilities of chemical changes during processing or forming of different materials when mixed with cosmetics cannot be denied. This proves that the safety cannot be evaluated adequately in this manner. It is desirable from the perspective of ensuring safety of the new ingredients that application be carried out on same substance contained in the final product, as is done in the majority of countries including Japan, the United States and Europe.

The disclosure and release of information also needs improvement. The Chinese government requires the disclosure of company secrets such as details on procedures, reaction process and reaction conditions of the manufacturing process when evaluating new ingredients and, there are cases where such information was published on the SFDA website after evaluation. In January 2014, CFDA invited public comments (scheduled for April 2014) on the revision of administrative rules for accepting new ingredients, and indicated its intention to accept new ingredients on a company-by-company basis and to not disclose company secrets such as manufacturing methods, etc. for four years. CFDA also made notifications to the WTO-TBT Committee in February. Although this revision may improve the disclosure and release of information and accelerate acceptance of new ingredients, details remain unclear.

Meanwhile, an amendment bill regarding the Regulations concerning Hygiene Supervision over Cosmetics (to be renamed to the Regulations concerning Supervision and Management of Cosmetics after the amendment), which is higher-level legislation relating to the Declaration, was published in July 2015. The bill proposed the introduction of a system whereby high-risk substances are made subject to registration, and low-risk substances are only required to be reported.

**<Problems under International Rules>**

TBT Articles 2.2 and 5.1.2, stipulate that technical regulations and conformity assessment procedures shall not be more trade-restrictive than necessary to fulfill a legitimate objective, taking account of the risks non-fulfillment would create. As mentioned above, the Chinese government claims that the objective of the regulation is to secure safe quality of cosmetics, but rational reasons for the registry of new cosmetic ingredients not progressing have not been given. In addition, the measures, including single substance application and safety requirements, appear to be more trade-restrictive than necessary in light of the policy objectives of the regulation, and so may violate TBT Articles 2.2 and 5.1.2.

**<Recent Development>**

Japan sent a comment raising its concerns in response to China’s TBT notification of June 2011, and also to the TBT enquiry point of the Chinese government in June 2012. In the TBT Committee meetings held since November 2011, Japan has raised questions about conformity with the TBT Agreement and
Chapter 1: China

has requested China to clarify the examination criteria/procedures and to relax scientifically groundless regulations. The United States and Europe also expressed their concerns at the Committee meetings.

While also continuing assessing the relationship between the amendment bill of the Regulations concerning Hygiene Supervision over Cosmetics that was published in July 2015 and the Declaration, Japan will continue to monitor whether there has been progress and, in cooperation with other concerned countries, to request improvement in the regulations.

(6) Regulations of Cosmetic Labels

Outline of the Measure

China’s cosmetic labeling regulations were promulgated on November 15, 2014, and the China Food and Drug Administration (CFDA) of the State Council of China made the TBT notifications on December 12. The enforcement date is scheduled to be July 1, 2015. The purposes of the regulations are to strengthen supervision and management of the cosmetic industry and protect the rights and interests of customers. The main contents of the draft regulations are as follows:

(1) Cosmetic labels may not be amended or supplemented by means of adhesion, trimming, or modifying.

(2) The descriptions, such as manufacturer names, all ingredients, and quality guarantee periods, etc. must be listed on the labels. The descriptions to be listed also include the actual manufacturers/processors.

(3) When indicating the effect/efficacy testing results on the product labels, a report showing the details of the testing concerned must be made public on the website specified by CFDA and are subject to supervision.

Problems under International Rules

With regard to (2), the purpose of requiring the listing of manufacturer names, etc. on the labels is explained as making the investigation of legal liabilities for illegal products easier. For customers, the identity of the responsible party when quality issues arise, is considered important information. For this purpose, however, listing only the companies having legal quality responsibilities is sufficient, and the necessity of requiring the listing of actual manufacturers is not explained. Therefore, the regulations are suspected of being more trade-restrictive than necessary in light of the objective and may violate Article 2.2 of the TBT Agreement.

In addition, with regard to (3), the purpose is said to be to facilitate companies in providing information to customers and to improve the technical details of products by disclosing the reports describing the details of effect/efficacy testing on the website. However, the regulations are suspected of being more trade-restrictive than necessary in light of the objective and may violate Article 2.2 of the TBT Agreement, because the necessity of providing this information is not explained, and, for instance, consumers are prevented from making appropriate decisions by not being aware of the details of the reports on effect/efficacy testing.

Recent Developments

In response to the TBT notifications on the draft regulations, Japan sent comments expressing its concerns to the TBT enquiry point of the Chinese Government in January 2015. Japan intends to request improvement of the draft regulations through active efforts at the TBT Committee meetings and bilateral consultations from March 2015 onward.

With regard to the regulations concerning (1), whether or not adhesive labels that are currently
allowed will continue to be allowed is not immediately clear from the provisions of the regulations. If adhesive labels are prohibited, and printed labels are required, China-specific packages need to be produced for products exported to China after adhesive labels have been prohibited. Therefore, in the comments sent in response to China’s TBT notifications, Japan requested China to clearly stipulate that adhesive labels would continue to be allowed.

The purpose of prohibiting adhesive labels is states to be to prevent companies from re-adhering labels multiple times. However, hard to peel off adhesive labels are also considered to be able to fulfill the objective. Therefore, if labels other than printed labels are not allowed, the regulations are suspected of being more trade-restrictive than necessary and may violate Article 2.2 of the TBT Agreement.

At a TBT Committee meeting in June 2015, China stated that over-labelling will continue to be allowed, and the entry into force of the regulations has been postponed from the initially scheduled July 1, 2015. China explained that the draft regulations will be revised according to the content of the Regulations concerning Hygiene Supervision over Cosmetics, which is higher-level legislation relating to the Declaration. Therefore, while checking the status of amendment of the Regulations concerning Hygiene Supervision over Cosmetics (to be renamed to the Regulations concerning Supervision and Management of Cosmetics after the amendment). Japan will keep a close watch on whether over-labelling will continue to be allowed, and also request China to make improvements on other points of concern (indication of the actual manufacturers/processors, and publication of detailed reports on effect/efficacy testing on a website) in TBT Committee meetings and bilateral consultations.

(7) Regulations of Chemical Substances

Outline of the Measure

On October 15, 2010, the “Measures for Environmental Management of New Chemical Substances” were enforced. The measures require pre-production/pre-importation declaration for managing new chemical substances produced in/imported by China. The new chemical substances that are subject to the declaration before production and upon import are chemical substances that are not listed in the Inventory of Existing Chemical Substances manufactured or imported in China.

The measures require three ecotoxicity tests: biodegradability tests (tests for measuring the degradation ratio of chemical substances by microbial sources such as activated sludge, etc. within a certain period of time), fish acute toxicity tests (tests for measuring the fatality rate of fish exposed to chemical substances for a certain period of time), and earthworm acute toxicity tests (tests for measuring the fatality rate of earthworms exposed to chemical substances for a certain period of time) to be conducted in China using organisms bred and raised in China. The guidelines established by the OECD (OECD Test Guidelines) are used for safety tests of chemical substances on an international basis. The OECD Test Guidelines, however, do not specify the place of origin of organism species and the location of laboratories used in these ecotoxicity tests.

In order to comply with the measures, tests must be conducted again in China using organism species bred and raised in China, even if there is test data obtained in accordance with the international guidelines (OECD Test Guidelines). This obstructs smooth business operations.

Problems under International Rules

The above-mentioned three ecotoxicity tests are required to be conducted in China using organism species bred and raised in China. It is unlikely, however, that the biological characteristics of the same organism species differ depending on the place of origin. If the biological characteristics of the same organism species differ depending on the breeding/raising conditions, specifying the breeding/raising conditions would be considered sufficient, but China does not explain the reasons for requiring the tests
to be conducted using organism species bred and raised in China. In particular, the same conditions are not specified for ecotoxicity tests other than the above-mentioned three (alga growth inhibition tests, etc.), and the reasons for applying different conditions based on the types of ecotoxicity tests are not explained. If the reasons are not reasonably explained, the measures may violate Article 2.2 of the TBT Agreement, which stipulates that conformity assessment procedures shall not be more trade-restrictive than necessary.

<Recent Developments>
In February 2014, missions were sent from the Japanese chemical industry to request Chinese authorities to improve the system. In addition, Japan expressed to Chinese authorities its concerns about the system in bilateral consultations during the TBT Committee meetings from November of the same year to March 2016, and. Additionally, in April 2016, information on management of chemicals by Japan and China was shared at the third meeting of the Japan-China Chemical Industrial Policy Dialogue, which was held for the first time in approximately four years, and personnel from the private sector expressed their concerns about the system and requested China to improve the system. Furthermore, with an eye to the revision of the Measures for Environmental Management of New Chemical Substances and the establishment of the Hazardous Chemical Safety Law, an information session on similar chemicals management regulations in Japan was held by experts from the public and private sectors in September and December 2016. Participants in the session exchanged ideas and information including concerns should be solved. In the future Japan will urge improvements in the system through bilateral policy dialogue, the TBT Committee and other channels.

TRADE IN SERVICES

COMMITMENTS UPON ACCESSION
Prior to accession, there were strict restrictions on foreign investment in the major Chinese services sectors.

For example, for the distribution services industry the process of experimental advances by retailers into limited major cities and special economic zones had been approved, for the telecommunications industry the entry of foreign investment companies was prohibited.

As a result of the WTO accession negotiations, China committed to the liberalization of various service sectors, which was intended to mitigate or do away with regulations like the geographical restrictions and the foreign equity restrictions pertaining to investment companies in a phased manner within roughly five years after acceding.

STATUS OF IMPLEMENTATION AND POINTS TO BE RECTIFIED
As the following will indicate, situations in which these accession commitments have not been completely fulfilled up to the present have been observed, and further responses will be sought from the Chinese Government in the future.
INDIVIDUAL MEASURES

(1) Distribution Services

Outline of the Measure

China enforced the “Measures for Administration on Foreign Investment in Commercial Fields” on June 1, 2004, and has gradually eliminated geographical and foreign equity restrictions on distribution sectors following its WTO accession commitments. However, foreign companies receive unfavorable treatment in terms of not being allowed to engage in the distribution of books, newspapers, magazines, and audio-visual products. They also receive disadvantageous treatment relative to domestically-financed companies when it comes to matters like their registration capital, operating term, and the publications they are permitted to manage and distribute.

Problems under International Rules

China committed to eliminating foreign equity restriction and allowing free distribution for books, newspapers and magazines within three years after accession (within one year for retailing services) except chain-store which has over 30 retail stores, and therefore measures highlighted in the previous paragraph may be inconsistent with China’s WTO accession commitments.

Recent Developments

In April 2007 the United States lodged a request for consultations with China pursuant to the WTO Agreements. As a resolution was not reached through the consultations, in November 2007 a panel was established by the Dispute Settlement Body (DSB) of the WTO. (Japan and the EU participated as third-party countries; refer to the section on “Recent developments” related to the “Right to Trade” in this chapter for more details). In the end, the case was referred to the Appellate Body, and China’s violation of the obligation under the Agreement became final and conclusive in December 2009. The time limit for complying with the WTO Recommendations was set at March 2011.

With regard to electronic publications, the General Administration of Press and Publication in February 2008 promulgated new “Electronic Content Publication Rules” and eliminated a clause stating “Independent foreign companies (100% foreign investment companies), Chinese-foreign joint ventures (companies established with investments by foreign companies and Chinese companies), and Chinese-foreign joint production companies (companies established with prior agreement on investment methods, profit distribution, and asset distribution, etc. between foreign companies and Chinese companies) may not engage in general wholesaling or wholesaling operations for electronic publications.”

In regards to books, newspapers and magazines, the General Administration of Press and Publications promulgated and implemented revised publication regulations (2001) in March 2011. Publication businesses by Chinese-foreign joint ventures, Chinese-foreign joint productions and foreign invested enterprises were also added to these revised publication regulations. Additionally, in December 2011, the National Development and Reform Commissions and the Ministry of Commerce issued the “Catalogue for the Guidance of Foreign Investment Industries (Amended in 2011) and implemented them as of January 2012. In the Catalogue, general publication and importation of books, newspapers and magazines, the importation of audio-visual products and electronic publications and electronic music distribution services were removed from the list of prohibited foreign investment industries (not investable) and not included in the list of restricted foreign investment industries (investable with special permits), and thus were considered to be included in the list of acceptable foreign investment industries (investable with general permits). The Catalogue for the Guidance of Foreign Investment Industries
(Amended in 2015), which came into effect in April 10, 2015, as well as the draft subject to public comments published on December 7, 2016, do not include the importation of books, newspapers and magazines, audio-visual products, electronic publications in the listing of restricted or prohibited foreign investment industries. However, the status of the implementation needs to be monitored continuously.

(2) Construction, Architecture and Engineering

(Please see pages 49-50 in the 2016 Report on Compliance by Major Trading Partners with Trade Agreements -WTO, FTA/EPA and IIA-)

(3) Telecommunication Services

<Outline of the Measure>

In China, telecommunications services are classified in “basic telecommunications services” (that provide public network infrastructure, public data transmission and basic audio-communication services) and “value-added telecommunications services” (that provide telecommunications and information services using public network infrastructure) in accordance with the Regulations on Telecommunications (promulgated in September 2000 and amended in August 2014 and February 2016). A telecommunications business license is necessary to provide telecommunications services.

Regarding the entry of foreign investment companies in the telecommunications service market, the Catalogue on Telecommunications Services Classification (promulgated in December 2001 and amended in September 2008 and February 2016) and the Management Measures for Telecommunications Business Licenses (promulgated in March 2009), which were established based on the Regulations on Telecommunications, provide conditions for such entry.

China has been gradually easing restrictions including business scope, investment ratio, region of operations, and minimum capital requirement. Currently, the limitation on service provision areas has been eliminated, but foreign capital ownership for basic telecommunications services and value-added telecommunications services (excluding electronic commerce) is limited to 49% or less and 50% or less, respectively. The specific details of basic telecommunications services and value-added telecommunications services are shown in the “Catalog of Telecommunications Services Classifications” amended in December 2015. However, the scope of services actually provided by foreign companies is limited, making it virtually infeasible for foreign communications companies (including Japanese ones) operating in China to provide data center services, internet connection services, and other services for which there is a strong demand from Japanese companies operating in China.

In May 2010, the State Council promulgated the “Several Opinions of the State Council on the Encouragement and Guidance of Sound Development of Private Investment”, which allows private capital to enter the basic telecommunication operation market in the form of capital participation. Furthermore, the National Conference on Industry and Information Technology 2013, which was held in December 2012, advocated private participation in trials for the resale business and access network business of mobile communications. In particular, resale of mobile communications had been conducted on a trial basis via the “Notice of Pilot Program for Mobile Communications Resale Business” released by the Ministry of Industry and Information Technology in May 2013. However, it sets up the requirements for application for the Pilot Program “for a domestic, privately-owned enterprise listed outside China, the percentage of equity held by the enterprise’s foreign investors shall be less than 10% and its single largest shareholder shall be a Chinese investor.”
Part I: Problems of Trade Policies and Measures in Individual Countries and Regions

As of February 2017, the Telecommunications Law, which will form the fundamental law for telecommunications business consistent with China’s commitments upon acceding to the WTO, had yet to be promulgated and enacted.

<Problems under International Rules>

Prior to its accession to the WTO, China strictly controlled sales of telecommunications services and prohibited the entry of foreign capital. However, upon its accession it made the following commitments, and has taken measures in terms of domestic systems as well:

1. Services like domestic and international phone calls among the basic telecommunication services (public communications infrastructure facilities, data and speech communication services, etc.): 49% limit on foreign investment

2. Mobile telecommunications services: 49% limit on foreign investment

3. Value-added services like information and database searches: 50% limit on foreign investment.

There is a possibility that the operation of related regulatory measures is in violation of Article 6 (Domestic Regulations) of the General Agreement on Trade in Services (GATS), which requires that such operation be performed in an impartial manner. China also undertook obligations outlined in the reference paper regarding telecommunications services, and so Japan needs to pay attention to violations of the commitments, such as “Public availability of licensing criteria”, etc.

<Recent developments>

Japan has made requests to China regarding elimination of minimum capital requirements, elimination or easing of foreign capital restrictions, etc., and has been encouraging it to fulfill its accession commitments through the WTO Doha Round negotiations, Japan-China Economic Partnership Consultation, the WTO’s Trade Review Mechanism (TRM) for China, and other forums, and will need to pay attention to the country’s regulatory status for telecommunication services within the trade frameworks of the China-Japan-Korea FTA and RCEP, etc. Furthermore, caution is also needed to ensure that China does not impose excessive telecommunications regulations in a manner that violates its WTO commitments for broadcasts of foreign-made dramas and animation, computer-related services and other related services (see below).

The restriction on foreign equity ratios, which previously had been limited to 50%, was abolished in the “Notice of the Ministry of Industry and Information Technology on Removing the Restrictions on Foreign Equity Ratios in Online Data Processing and Transaction Processing Business (Operating E-commerce)” (G.X.B.T. [2015] No. 196) promulgated by the Ministry of Industry and Information Technology on June 19, 2015.

The Catalogue on Telecommunications Services Classification had not been revised since it came into effect in 2003, and did not reflect the actual status of telecommunications services that had developed dramatically since then. However, public comments on a draft revision were solicited in April 2013, and a revised edition of the catalogue was announced in December 2015 (came into effect in March 2016). It should be noted that in the revised Catalogue on Telecommunications Services Classification, the resale of mobile communications is clearly classified as a basic telecommunications service and the 49% limit on foreign investment is assumed to apply to commencement of commercial services of such resale.

 REGULATIONS ON BROADCASTS AND DELIVER OF FOREIGN-MADE DRAMAS AND ANIMATION

Prime-time broadcasts (during the hours 17:00-20:00) of animation produced outside of China have been prohibited as of September 2006, and the hours of prohibition were extended to 21:00 as of May 2008. Additional controls governing the total volume of broadcasts of foreign-made dramas and
Part I: Problems of Trade Policies and Measures in Individual Countries and Regions

and has taken measures in terms of domestic systems as well: prohibited the entry of foreign capital. However, upon its accession it made the following commitments, to be promulgated and enacted.

<Problems under International Rules >

reference paper regarding telecommunications services, and so Japan needs to pay attention to violations such operation be performed in an impartial manner. China also undertook obligations outlined in the telecommunication business consistent with China's commitments upon acceding to the WTO, had yet to be fulfilled. Furthermore, caution is also needed to ensure that China does not impose excessive telecommunications regulations in a manner that violates its WTO commitments for broadcasts of foreign-made dramas and animation, computer-related services and other related services (see below).

<Recent developments>

elimination or easing of foreign capital restrictions, etc., and has been encouraging it to fulfill its accession commitments through the WTO Doha Round negotiations, Japan -China Economic Regulations on Broadcasts and Delivery of Foreign-Made Dramas and Animation.

As of February 2017, the Telecommunications Law, which will form the fundamental law for the country's regulatory status for telecommunication services within the trade frameworks of the China-Japan-Korea FTA and RCEP, etc.  Furthermore, caution is also needed to ensure that China does not impose excessive telecommunications regulations in a manner that violates its WTO commitments for broadcasts of foreign-made dramas and animation, computer-related services and other related services (see below).

The “Notice on Further Implementation of Provisions Concerning the Administration of Online Foreign Films and TV Dramas” (No. 204), issued by SAPPRFT in September 2014, includes provisions stipulating that the number of foreign films/dramas on the respective video sites annually imported/broadcast shall not exceed 30% of the total number of domestic films and TV dramas purchased and broadcast in the previous accounting year; also, an application for examination of all the foreign films/dramas scheduled to be broadcast in the coming year shall be submitted to SAPPRFT in order to obtain prior permission.

On March 31, 2015, the Ministry of Culture issued a press release stating that it will regulate animation works that lead minors to commit crimes and that include violence, pornography, terrorist acts, or content that harms social morality. On June 9 of the same year, it published a list of works that would be subject to the regulation. The list is a result of examination conducted by law enforcement agencies throughout China based on China’s two management provisions (Provisional Rules for Administration of the Internet Culture, Regulations on Administration of Internet-Based Audio-Video Program Services) and the examination standards prescribed in these provisions. Requests have been made to stop the distribution of the works subject to regulation. While the regulations target domestic and foreign animation works, all of the works in the recently published list of works subject to regulation are Japanese works. In this manner, the management of Internet video distribution has also been strengthened.

In June 20, 2016, SAPPRFT issued the Notice on Promotion and Enhancement of Indigenous Innovation of Television Programs to be Broadcast. Section 3 states that in cases where a foreign format program is broadcast on a satellite general channel, a notification shall be made to a relevant Provincial Administration of Press, Publication, Radio, Film and Television no later than two months before the broadcast, and after the Provincial Administration of Press, Publication, Radio, Film and Television reviews and approves the program, a notification shall be made to SAPPRFT. It also provides that the number of foreign format programs broadcast during hours from 19:30 to 22:30 shall not exceed two per year and the number of foreign-format programs that are newly broadcast (new programs) shall not exceed one per year and shall not be broadcast during hours from 19:30 to 22:30 in the first year.

(4)  Finance

(a)  Insurance

Outline of the Measure>

In June 2006 the State Council promulgated “Several Opinions of the State Council on the Reform and Development of the Insurance Industry,” which contains provisions intended to fulfill China’s WTO accession commitments and to promote the opening up to outside companies. However, lengthened approval procedures for foreign-invested insurance companies and transparency for administrative procedures related to approval such as licenses, branch offices (including local subsidiaries), and
Part I: Problems of Trade Policies and Measures in Individual Countries and Regions

products, remains to be solved.

With regard to foreign-invested companies’ capital participation in local insurance companies in China, the China Insurance Regulatory Commission (CIRC) promulgated the “Measures for Administering Insurance Companies’ Equity Interest” on May 4, 2010. According to this, in the case of an insurance company for which the investment/capital participation ratio of foreign-invested shareholders is less than 25% of the company’s registered capital, investment exceeding 20% by a single shareholder (including those on the related side) is permitted if the following conditions are satisfied: Although a foreign financial institution holds 15% or more of shares of an insurance company as a single shareholder, (1) it is a major shareholder that can directly or indirectly control the insurance company and has continuous investment ability and its financial reports demonstrated that it was profitable for the most recent three accounting years, (2) its net assets are not less than 200 million yuan, and (3) it is in high repute and also holds a leading position the industry.

In addition, Article 5 of the “Measures for Administering Insurance Companies’ Equity Interest” (insurance companies for which the foreign investment ratio or the shareholding ratio is 25% or less, where two or more insurance companies are under the control of the same institution, shall not operate insurance businesses of similar kind that involve conflict of interest or competitive relationship) prohibits so-called double licenses, but there is a problem because no clear standard has been indicated with regard to the aforementioned control standard.

In terms of reinsurance business, the provisional regulations of “preferential treatment for domestic reinsurers” were removed from the new “Insurance Law”, which came into effect in October 2009. Following this, the contents of the “Measures for the Administration of Reinsurance Business” (CIRC 2005), which was revised on May 21, 2010, were also adjusted. This adjustment enables foreign insurance companies to compete with domestic companies fairly as they are no longer regulated under the “preferential treatment for domestic reinsurers”. However, transactions of reinsurance with affiliate companies by foreign insurance companies are prohibited without a permit issued by the CIRC (Article 23).

<Problems under International Rules>

With regard to automobile insurance, the Regulations on Automobile Traffic Accident Liability Statutory Insurance formally entered into force on July 1, 2006, and statutory insurance and voluntary insurance came to be operated separately. The plural number of foreign-invested nonlife insurance companies obtained approval for voluntary automobile insurance business. However, foreign-invested nonlife insurance companies were disadvantaged in terms of competition compared to domestically-invested insurance companies, as they had to separately secure statutory insurance at domestic insurance companies when dealing with voluntary insurance.

Moreover, in December 2006 the CIRC released the “Directive on Strengthening Information Disclosures for Reinsurance Transactions by Foreign-Invested Insurance Companies and their Affiliated Companies.” Enacted on January 1, 2007, the directive calls for greater information disclosures by foreign insurance companies. As there is the potential that foreign insurance companies will not receive treatment that is equal to local insurance companies in China, the above regulations may possibly represent a violation of the country’s accession commitments. In order to operate in China, foreign-invested life insurance companies are required to establish joint ventures with maximum foreign investment of 50%.

Furthermore, with regard to approval for establishing branch offices and local subsidiaries, China committed to issuing licenses without economic needs consideration and quantitative restrictions. Yet despite this, examples in which the standard processing period for approval for foreign insurance companies has been greatly exceeded have been observed, and cases in which the entry of foreign
insurance companies is effectively restricted may potentially violate China’s accession commitments.

<Recent Developments>

Concerning these measures, at China’s TRM at the WTO’s Council for Trade in Services in October 2009, Japan sought indications regarding the details of China’s system and its consistency with China’s accession commitments, but has not received satisfactory responses. As mentioned above, due to the revision of “Insurance Law”, restrictions were eliminated in cases where foreign insurance companies develop their business in the Chinese reinsurance market. Further, on October 19, 2015, the “Provisions on the Administration of the Reinsurance Business (2015 Amendment)” was promulgated. It is based on the “Decision of the China Insurance Regulatory Commission on Revision of Eight Regulations Including the Administrative Measures on Establishment of Overseas Insurance Service Agencies by Insurance Companies (Bao Jian Fa [2015] No. 3). Former Article 23, which provided that no foreign-invested insurance company may conduct reinsurance business with any enterprise affiliated to it unless it obtains ratification from the China Insurance Regulatory Commission, was deleted. However, it is expected that the monopolization of the market by domestic companies will not change in the short term as domestic reinsurance companies prefer conducting their business through “personal connections”.

In terms of auto insurance, in August 2011, the CIRC distributed a press release titled “promoting development of China's mandatory insurance system”, which stated that it would “actively conduct a study on opening the market to foreign investors”. Following this, in February 2012, the policy to open the market to foreign investors was made public in the US-China joint fact sheet at the bilateral meeting between the Chinese Vice-President and the US President. In May 2012, the mandatory insurance system was opened to foreign investors. Of the 2-stage approvals required for conducting mandatory insurance business, Japanese nonlife insurance companies obtained the first stage approvals for changing the scope of business in April and May 2014. Some Japanese nonlife insurance companies obtained the second stage approvals for conducting business from the CIRC in November of the same year and started conducting mandatory insurance business. Furthermore, the 119th Standing Committee of the State Council approved the Decision on Partial Amendment to Administrative Regulations (the Circular of the State Council of China No. 666) on January 13, 2016, and promulgated it on February 6, 2016. In the past, approval of the China Insurance Regulatory Commission was required to provide automobile traffic accident liability statutory insurance services, but Article 50 of the Decision revised that rule to allow any insurance company to provide the services without obtaining such approval.

(b) Banking

<Outline of the Measure>

With regard to the Renminbi business, on December 11, 2006 the “Regulations on the Administration of Foreign-Owned Banks” and the “Detailed Rules for Implementation of the Foreign-owned Bank Control Regulations” were enacted. This was accompanied by the repeal of the “Regulations on Administration of Financial Institutions with Foreign Capital” (promulgated in 2001), and the Renminbi business was opened to foreign-owned banks.

However, the creation of local subsidiaries serves as a virtual condition in order for foreign-owned banks to fully engage in the Renminbi business aimed at individuals in China. In addition to which, the Renminbi business aimed at individuals within China by branches of foreign-owned banks is limited to fixed-term deposits of 1 million yuan or more per person. Moreover, if branch offices of foreign banks are converted to local subsidiaries they will come to occupy the same position as Chinese banks. However, as a result of this new restrictions will be imposed, including “loans to a single company of no
Part I: Problems of Trade Policies and Measures in Individual Countries and Regions

more than 10% of the bank’s balance of capital.”

In addition, the Chinese authorities also set external debt limit regulations that restrict influx of foreign capital in order to prevent influx of speculative money (hot money) into real estate and shares. The regulations have the effect of regulating total volume. However, there is a concern that the regulations may affect the sound development of the Chinese economy by hindering the raising of capital by companies.

<Problems under International Rules>

China committed that it would repeal existing measures which restrict matters like the foreign investment ratio, services, and corporate configuration, excluding those for the preservation of orderly credit conditions, within five years of its accession. The conditions for deploying services and similar requirements imposed on foreign-owned banks may potentially constitute a violation of China’s accession commitments.

<Recent Developments>

In September 2010, the United States submitted a request for consultations with China pursuant to WTO Agreements, on the grounds that permitting business operators in China monopolize credit-card transactions on a Chinese yuan basis and not allowing foreign credit card companies to enter such transactions is inconsistent with China’s WTO accession commitments. The consultations did not reach a resolution, and a dispute settlement panel was established in February 2011. In July 2012 it determined that, while there was no proof of the monopolization of Chinese yuan-based credit card transactions by business operators in China, requiring the display of logos and terminal installation, etc. in favor of business operators in China was unfairly discriminating against foreign credit card companies, and so violated the WTO Agreements. In October 2014, the State Council adopted regulation relaxation measures, which allowed foreign credit card companies to handle Chinese yuan-based transactions and to establish transaction companies in China, and opened the market to foreign-invested companies.

In the “China (Shanghai) Pilot Free Trade Zone” established by the Chinese Government in September 2013, regulation relaxation measures have been implemented on a trial basis in various sectors, and a series of financial liberalization policies were introduced, including lifting the prohibition, with usage restrictions, etc., on cross-border yuan transactions by companies within the Zone. (Shanghai Headquarters of the People's Bank of China “Notification No. 20” in February 18 and “Notification No. 22” and others in February 20, Shanghai Pilot Free Trade Zone Administrative Committee “Measure No. 26” (regarding commercial factoring) in February 21, Shanghai Office of the State Administration of Foreign Exchange “Notification No. 26” (lifting the prohibition on intensive settlement, netting, and pooling of foreign capital between group companies on an international basis) in February 28, etc.)

In addition, there are efforts to extend these regulation relaxation measures implemented in the “China (Shanghai) Pilot Free Trade Zone” to other regions. The relaxation measures regarding conversion of foreign currency capital into Chinese yuan permitted by the above-mentioned “Notification No. 20” were extended to 16 regions in China by the State Administration of Foreign Exchange “Notification No. 36” on July 4 and nationwide by the State Council “Notification No. 65” on December 21.

On December 20, 2014, the “Decision of the State Council on Revision of Bylaws for Management of Foreign-Owned Banks” was promulgated (it was promulgated on December 20, 2014; it came into effect January 1, 2015; the Circular of the State Council of China No. 657). Under the Decision and the Circular conditions for market entry and handling of Chinese yuan-based transactions were eased for foreign-owned banks. Also, on April 8, 2015, the “Circular of the General Office of the State Council on Issuing the Special Administrative Measures (Negative List) for Foreign Investment Access to Pilot Free
Trade Zones” to be applied to the four Free Trade Zones of Shanghai, Guangdong, Tianjin, and Fujian was promulgated.

Announcement of the People's Bank of China and the State Administration of Foreign Exchange [2015] No. 40 was promulgated on December 23, 2015. As a result, from January 4, 2016, the operation closing time of the transaction systems of the China Foreign Exchange Trade System (CFETS) was extended from 16:30 to 23:30 (Beijing time), and foreign banks were able to conduct Chinese yuan-based exchange transactions in the interbank market by becoming FX market members through application with the CFETS.

(c) Securities

<Outline of the Measure>

The content of the commitment to open up securities business to foreign companies, which China made at the time of its accession to the WTO, is as follows. (1) In terms of establishment by merger of companies managing securities investment funds, the foreign investment ratio was up to 33% at the time of the accession, increased to up to 49% within three years of accession. (2) The establishment of securities companies in the form of merger was to be allowed within three years after the accession, but the foreign investment ratio was not to exceed one-third. Merged securities companies may conduct underwriting and selling business for A-shares, but entry into the distribution market of A-shares is not permitted. In addition, merged Chinese companies are required to be securities companies, and merged securities companies cannot engage in the same business as the parent companies (so-called “competition prohibition rules”). The “Decision on Amendments to the ‘Regulations on the Establishment of Foreign-Invested Securities Companies,’” which was promulgated in October 2012, stipulates that foreign investment ratio has been raised to 49%.

<Recent Developments>

In 2002, a system in which Qualified Foreign Institutional Investors (QFII) are allowed to purchase yuan with foreign currencies and invest the yuan in securities was introduced as a relaxation of the regulations for cross-border yuan transactions, and in April 2012, the China Securities Regulatory Commission announced expansion of the total of the amount of investment by QFII to 80 billion dollars, and also announced in July 2013 that the total investment limit would be raised to 150 billion dollars.

The State Administration of Foreign Exchange (SAFE) promulgated the “Regulations on Foreign Exchange Administration for Domestic Securities Investments by Qualified Foreign Institutional Investors (QFII)” (Announcement No. 1 of the SAFE in 2016) in February 2016. An application by a QFII for an investment quota within the basic quota (upper limit of 5 billion dollars) that is calculated based on the size of its assets or assets under management is no longer required and such acquisition is managed through notification. Also, a measure was taken to shorten to three months the lock-up period during which the investment principal cannot be remitted overseas.

Additionally, in December 2011, the Renminbi Qualified Foreign Institutional Investor (RQFII) was introduced as a system for investing in Chinese domestic securities with offshore Renminbi funds, and the investment limit was raised to 270 billion yuan in November 2012. It initially applied to Hong Kong financial institutions; then the investment limit was raised to 80 billion yuan for the UK (London) and 50 billion yuan for Singapore in 2013, to 80 billion yuan for France, 80 billion yuan for the Republic of Korea, 80 billion yuan for Germany, 30 billion yuan for Qatar, 50 billion yuan for Australia, and 50 billion yuan for Canada in 2014, and 60 billion yuan for the Republic of Korea and 30 billion yuan for Singapore in 2015. In accordance with the Notice on Issues Relevant to Administration of Domestic Securities Investment by Renminbi Qualified Institutional Investors (Yinfa [2016] No. 227), the acquisition of an investment quota by a RQFII within the same basic quota (upper limit of 5 billion
Part I: Problems of Trade Policies and Measures in Individual Countries and Regions

dollars) as that for QFII, has been subject to management through notification since September 2016.

Furthermore, two-way exchanges between the Shanghai Stock Exchange and the Hong Kong Stock Exchange were allowed to a certain extent in November 2014 (a daily maximum of 13 billion yuan and total amount of 300 billion yuan for investment in Shanghai, and the daily maximum of 10.5 billion yuan and total amount of 250 billion yuan for investment in Hong Kong), thereby enabling foreign investors to acquire Chinese yuan-based stocks in the Shanghai Stock Exchange via the Hong Kong Stock Exchange.

On February 17, 2016, the People’s Bank of China promulgated the “Announcement on More Appropriate Implementation of Matters Concerning Investment by Foreign Institutional Investors in Interbank Bond Markets” (Announcement No. 3 of the People’s Bank of China in 2016). As a result, it became possible for foreign institutional investors such as foreign banks and securities companies to conduct bond transactions on China’s interbank markets after completing a notification procedure with the People’s Bank of China.

(d) **Financial Information**

**<Outline of the Measure>**

In September 2006 the Chinese state-run Xinhua News Agency promulgated the “Law Controlling the Promulgation of News and Information within China by Foreign News Agencies,” announcing that it would take effect the same day. The law mandated that foreign news agencies transmitting news in China had to obtain prior approval from Xinhua News Agency and must transmit said news through an agency designated by Xinhua. As a result, direct news transmissions from foreign news agencies to consumers within China which had previously been authorized were no longer allowed.

**<Problems under International Rules>**

China is currently carrying out its liberalization commitments related to the “provision and transfer of financial information.” At this stage, its imposition of restrictions on the transmission of information, including financial information, on only foreign news agencies may potentially violate its national treatment obligations. In addition, within this same pledge China also made commitments to the effect that it would not become more restrictive than it was at the time of its accession with regard to matters like the approved business scope for foreign service providers that had already advanced into the country. These restrictions may potentially violate this pledge.

**<Recent Developments>**

At China’s TRM at the WTO’s Committee on Trade in Financial Services in November 2007, Japan raised these issues but did not receive satisfactory responses. In March 2008 the United States and the EU lodged a request for consultations with China pursuant to WTO agreements regarding this matter. (In June Canada also requested consultations.) On November 13, the US, the EU and Canada agreed to review with China the regulations governing financial information distribution services provided by foreign communications companies within China. Statements by the US and other countries indicate that China has agreed, among other things, to (1) designate an independent regulatory institution to grant distribution licenses, and (2) to repeal the requirement that foreign communications companies provide their distribution services through an agent, etc.

In response to this, in April 2009, the State Council Information Office, the Ministry of Commerce and the State Administration for Industry and Commerce jointly promulgated the “Provisions on Administration of Provision of Financial Information Services in China by Foreign Institutions.” The provisions entered into force on June 1, 2009. These provisions made clear that financial information services differed from news agency services, and foreign institutions will not be subject to the
regulations under the “Measures for Administering the Release of News and Information in China by Foreign News Agencies” (Xinhua News Agency, 2006) when they provide financial information services. In addition, the provisions designated the State Council Information Office as the agency for supervision and administration of foreign institutions providing financial information services in China instead of Xinhua News Agency. The provisions do not contain the statement that “an agent is required when a foreign institution distributes financial information.” As a result, foreign institutions are now allowed to provide direct financial information services targeted to China’s domestic consumers if they obtain permits from the State Council Information Office. In 2014, the State Council issued the Notice on Authorizing the Cyberspace Administration of China to be responsible for the Management of Internet Information Content (Guo Fa [2014] No. 33). In accordance with the notice, the Cyberspace Administration of China has been responsible for supervising and managing financial information services provided by foreign institutions in China. According to the List of Foreign Institutions Permitted to Provide Financial Information Services in China, as of December 30 of the same year, the Cyberspace Administration of China had given permission to provide financial information services within China to 39 foreign financial information service providers.

PROTECTION OF INTELLECTUAL PROPERTY

COMMITMENTS UPON ACCESSION

One of the areas in which Members (especially developed country Members) strongly sought improvements from China in the Working Party on accession was its systems for protecting intellectual property. These concerns reflect the increasingly serious problem of counterfeit and pirated products and other infringing goods in China. Following Working Party negotiations, China committed to adhering to the TRIPS Agreement immediately upon accession.

China did not seek transitional measures as a developing country, but committed to adhere to its obligations under the TRIPS Agreement upon the date of accession and to amend and improve its legal system to bring it into conformance with the TRIPS Agreement. In particular, China committed to reforming: the Patent Law (including patents for invention, patents for utility models, and patents for industrial designs), the Trademark Law, and the Copyright Law. In the area of enforcement, China further committed to performing its obligations under the TRIPS Agreement by rationalizing compensation payments for losses, bolstering its system for suspending products, strengthening administrative measures and border measures, easing requirements for applying criminal penalties, as well as educating and enlightening the public.

STATUS OF IMPLEMENTATION

In China, protection of intellectual property is regulated substantively through several laws including: the Patent Law; the Trademark Law; the Copyright Law; the Law against Unfair Competition (Anti-unfair Competition Law); regulations prohibiting acts infringing upon undisclosed information (trade secrets); the Implementation of the Protection Regulation of Layout Designs of Integrated Circuits; and the Technology Exports and Imports Administrative Ordinance. Procedurally, intellectual property rights are protected through the general provisions of the Civil Law; the Criminal Law; the Customs Law; and the Regulations on Customs Protection of Intellectual Property.

Numerous new laws have been established or amended and old laws and ordinances abolished to bring the legal system into conformance with the TRIPS Agreement. In addition, 2008 saw the enactment of the Outline of the National Intellectual Property Rights Strategy (June 2008), aimed at
developing an innovation-driven nation and to improving its capabilities for creating, utilizing, protecting and managing intellectual property rights, as well as the 2008 Action Plan on Intellectual Property Rights Protection (April 2008), which offers systematic guidelines and concrete steps to protect intellectual property nationwide, signifying a pro-active attitude by China toward protecting intellectual property rights. Furthermore, in October 2010, the “Bill of activities for the special project to expose the violation of intellectual property rights, manufacturing and sales of imitation and poor quality goods” has been passed by the State Council of China. Intensive special project activities were conducted nationwide in order to discover violations of intellectual property rights, manufacturing and sales of imitation and poor quality goods. In addition, China has been making efforts to strengthen the administrative measures by establishing a national group that instructs how to discover and counteract violations of intellectual property rights and manufacturing and sales of imitation and poor quality goods in November 2011. In the “2012 National Intellectual Property Rights Strategy Enforcement Promotion Plan” (April 2012) China also raised in detail a number of administrative measures to strengthen the structure of the intellectual property rights violation eradication system. At the local level, for example, three hit double option activities have been conducted with the aim of eradicating counterfeit products in Guangdong Province (three hit double option activities have ended for the present and were replaced by double option activities - establishing market surveillance and reliability systems).

In August 2012 and in March 2013, the State Intellectual Property Office (SIPO) announced a proposal for amendment of the Patent Law to improve enforcement, including strengthening administrative authority (opinion collection draft), and as of December 2015, a referral draft for deliberation within the government was published by the State Council. Amendment of the Trademark Law also progressed rapidly; the revised Trademark Law was established in August 2013 and became effective on May 1, 2014. Furthermore, the “Promotion Plan for the Implementation of the National Intellectual Property Strategy in 2014” (April 2014) also listed a number of efforts, including the implementation of specific actions concerning the sales of infringing/counterfeit products using the Internet, etc. The “establishment of intellectual property courts” was also raised as a discussion item in this Plan, and Intellectual Property Courts were established in Beijing, Shanghai and Guangzhou 8 in 2014. This is expected to lead to strengthening of intellectual property rights protection by unified judgments.

Several Opinions on Accelerating the Construction of Great Power in Intellectual Property Rights Industry under the New Situation, promulgated by the State Council on December 18, 2015, set out tasks to be carried out to construct the building of China into a great power in the intellectual property rights industry by 2020. In addition, on April 19, 2016, the General Office of the State Council issued the Notice on the Key Points for the Work of Combating Infringement upon Intellectual Property and Manufacture and Sale of Fake or Low-quality Goods across the Country in 2016, which describes priority tasks, such as enhancement of efforts to control infringement of rights on the Internet and fake or low-quality goods, etc. Based on these documents, the 2016 Plan for Promoting In-depth Implementation of State IP Strategy and Further Building of China into a Great Power through IP, which clarifies priority tasks and measures, was promulgated on June 24, 2016.

**POINTS TO BE RECTIFIED**

As to the legal system for protecting intellectual property rights, in general, China has brought it into approximate conformance with the TRIPS Agreement, though further improvements are still considered necessary or desirable on a number of issues.

---

8 The courts in these three cities have different functions. The court in Beijing mainly grants administrative rights such as patents and trademarks, and examines and processes cases in which rights have been granted. It also examines and processes civil cases. The courts in Guangzhou and Shanghai mainly examine and process civil cases of infringement of rights such as patents, and do not grant administrative rights such as patents and trademarks or examine cases in which rights have been granted.
necessary or desirable on a number of issues.

It has been noted, however, from the point of view of the actual situation of distribution of infringing products such as counterfeit/pirated products, etc., that little improvement has been seen in spite of the efforts of the Chinese authorities. As proof of this, a survey of Japanese companies showed that, among the companies that suffered damage caused by counterfeiting in fiscal year 2014, 64.1% cited China and Hong Kong as the country where counterfeit and pirated products were produced, transferred, sold or provided (“FY 2015 Survey Report on Losses caused by Counterfeiting,” Japan Patent Office (March 2016)). According to a Survey Report published by the Ministry of Finance of Japan in March 2017 (“2016 status of seized goods due to violations of intellectual property rights at customs”), the number of cases where imports from China were seized at Japan Customs due to violations of intellectual property rights was 23,916, which was more than 9 out of 10 (91.9%) among all (26,034). What is needed to rectify this situation is not only improvement of the actual legal system, but also drastic improvements in the enforcement of the existing legal protections. Tighter control needs to be exerted in the administration of various judicial and administrative branches. In addition, despite such circumstances, the “Action Plan for Further Implementation of the National IP Strategy” announced by the State Council of China in December 2014 stated that the goals of the “Outline of National Intellectual Property Rights Strategy (June 2008)”, which aimed at clear reduction of counterfeit/pirated products within the five-year period, were basically achieved. Therefore, the difference in perception also needs to be resolved.

The following sections specifically identify points where further remedies or improvements are sought.

(1) Issues Related to Counterfeit, Pirated and Other Infringing Products

<Outline of the Measure>
Protection of intellectual property first requires improvement of specific regulations. China’s efforts to make improvements as it acceded to the WTO through a series of amendments to its laws and recent revision of the Trademark Law, etc. should be recognized. Nevertheless, in ensuring the effective protection of intellectual property, in accordance with the provisions of the TRIPS Agreement, it is vital that enforcement systems using civil, administrative, criminal and other procedures be strengthened and, where necessary, implemented in more efficient and speedy manner. Moreover, enforcement systems must be administered in a fair and equitable manner.

The following section notes several issues on enforcement, which play a large role in protecting intellectual property in China.

<Problems under International Rules>
(a) Inadequate administrative, civil and criminal remedies

For intellectual property rights infringements, Chinese laws and regulations recognize administrative penalties (suspension of infringements, levying of administrative fines, confiscation and disposal of goods infringing rights, etc. by the administrative authorities), and allow for civil recourse (embargo based on court judgment, compensation for losses, rehabilitation of reputation through advertisements expressing apologies, etc.), as well as criminal sanctions (imprisonment, fines, etc.).

Administrative Procedure

While the Chinese Government has enforced administrative penalties, the penalties are insufficient. In the case of trademark infringements, administrative penalties under the Article 60 of the new
Trademark Law provide for a maximum fine for an act of infringement of the exclusive right to use a registered trademark of five times the amount of the illegal business turnover (the price of manufactured and sold infringing goods) (if it is 50,000 or more yuan), or not more than 250,000 yuan (where there is no illegal business turnover or if it is less than 50,000), and similar provisions are also included in the referral draft of the proposal for amendment of the Patent Law as of December 2015. Meanwhile, the Trademark Law provides that more severe punishment should be given to those who have infringed trademark rights twice in five years or in other serious circumstances. Its effective enforcement is expected.

However, in cases where infringers intentionally do not keep accounts, etc., correctly calculating the amount of the illegal business turnover has been difficult. A sufficient deterrent compared to the illegal profits that can be earned by infringements cannot be imposed because the amount of the illegal business turnover determined tends to be lower than the actual amount. In the case of the infringement of copyrights, although administrative penalties are imposed by the administrative agency in charge of copyrights (the Copyright Agency) when “public interests are damaged,” the requirement is not yet clearly defined. Because of the lack of clarity of this requirement, copyright owners who wish to see the violators penalized are sometimes required to submit excessive proof of infringement to identify the violators and/or pirate product manufacturers, and imposing penalties is exceedingly difficult. It is desirable, therefore, to have relaxation of requirements, clarification of the enforcement requirements, and the mitigation of overly-stringent requirements. In the proposal for revising the Trademark Law (opinion collection draft) announced by the Legislative Affairs Office of the State Council in January 2013, the requirement regarding “damage to public interests” was deleted. However, the requirement was once again included in the Measures for the Implementation of Copyright Administrative Penalties (Revised Draft for Comments) that was published on September 8, 2015, so future developments will be monitored. Moreover, as repeat offences are very frequent (Ministry of Economy, Trade and Industry, “Field Survey of Intellectual Property Infringement in China,” March 2010), more severe penalties are required from the standpoint of a deterrent to further infringements called for in Article 41 of the TRIPS Agreement.

Although simplified processing for Customs enforcement has been achieved through the implementation of the General Collateral Regulations, more improvements are required. Japan looks forward to improvements in the procedures required under the current export regulation system (e.g., improvement in the responding period for the rights holder, further simplifying appraisement procedures, etc.), as well as abolition of the practice of having the rights holder pay warehousing fees, etc.

There are also reports that counterfeit goods manufactured in China are exported to various parts of the world, including other Asian countries and Middle East, with potentially unfair and distortive effects on international trade. Furthermore, there are many reports of goods discovered with improper indications of origin. Article 51 of the TRIPS Agreement does not require the introduction of export restrictions. However, this could still be considered an area requiring stronger measures for seizure in order to provide for effective exercise of rights under Article 41.1.

Civil Recourse

With regard to civil remedies against infringements of intellectual property rights, compensation claims are allowed and there also are efforts to raise the amount of compensation. However, that adequate compensation is not necessarily being recognized, and compensation is rarely paid by infringers even if the rights holder wins a case. In this regard, some Interpretations of the Supreme People’s Court have been adopted on methods of calculating damages -- for example, (1) “The Judicial Interpretation of the Supreme People's Court on Questions Regarding Applicable Laws for Adjudication of Patent Dispute”, which went into effect in July 2001 (the “Decision on Revision” came into effect on
Chapter 1: China

February 1, 2015); (2) the related Interpretation came into effect on April 1, 2016; (3) the new Trademark Law and “The Interpretation of the Supreme People’s Court of Several Issues Concerning the Application of the Law to the Trial of Civil Dispute Cases Involving Trademarks”; (4) and “The Interpretation of the Supreme People’s Court Concerning Several Issues on Application of Law in Hearing Correctly the Civil Copyright Cases", which went into effect in October 2002. However, there are said to be many cases which approve compensation within the limits stipulated in those interpretations, yet do not adequately compensate the rights holder. The “Interpretation of the Supreme People’s Court of Several Issues Concerning the Application of the Law in Trials of Patent Infringement Dispute Cases,” which entered into force in January 2010, also contains provisions on the amount of compensation for damages. The “Supreme People’s Court’s Opinions on Several Issues Concerning Overall Support for Intellectual Property Lawsuits under the Current Economic Situation,” notified in April 2009, also includes a provision to the effect that the compensatory, punitive, and deterrent effects of compensation for damages shall be strengthened. Japan needs to continue monitoring how these provisions, etc. are administered when courts find the amount of damages in lawsuits, in light of the provisions of Article 45 of the TRIPS Agreement, which require adequate compensation for damages, and the commitment made by China at the time of its accession to the WTO to provide adequate compensation for damages. The draft for a revised Patent Law (draft for referral) announced in December 2015 and the new Trademark Law to be enforced in May 2014 provide a three-fold increase in maximum compensation and the amount of statutory damages (no more than five million yuan in the December 2015 draft for a revised Patent Law and no more than three million yuan in the new Trademark Law) in case of intentional patent or trademark infringement. Future developments will be monitored. The “Promotion Plan for the Implementation of the National Intellectual Property Strategy in 2015” sets forth revision of the above-mentioned Supreme People’s Court’s interpretation, so the contents of the interpretation may change in the future.

Criminal Sanctions

As for criminal sanctions, Paragraph 7, Chapter 3 of the Criminal Code provides for imprisonment and fines for criminal cases of infringements of intellectual property rights (trademark infringement is covered in Articles 213 - 215, copyright in Articles 217 - 218). However, there were some problems concerning the requirements to impose criminal penalties. Since the monetary thresholds for criminal prosecution were up to 50,000 yuan, coupled with a lowered value for the amount of illegal business turnover due to calculations based on the price of infringing goods as claimed by the accused party (which is very likely to be underreported) instead of the price of the genuine goods, it was impossible to meet the standards for criminal prosecution and to impose criminal penalties even if there is infringement on a commercial scale in many cases. Furthermore, the threshold for companies is three times higher than the threshold for individuals, making it difficult to impose criminal penalties against infringements by companies.

Under the current conditions it is still difficult to levy criminal penalties, thus weakening the ability to deter infringement and not tying into the especially effective prevention of repeat offenses. As such, there are concerns regarding the effective enforcement of intellectual property rights. In addition, there are many sophisticated cases of infringement where the distribution of small lots and inventory control is used, etc. Criminal detection of the reality of the increasingly organized and sophisticated counterfeit goods business is quite difficult (at the small-scale retail level, in particular). Japan has been highly interested in the enforcement of effective intellectual property rights. Japan continues to request improvements during bilateral talks between Japan and China such as the Japan-China Economic Partnership Conference, as well as at multilateral forums such as the Transitional Review Mechanism (TRM) of the WTO TRIPS Council. The “Interpretation by the Supreme People’s Court and the Supreme People’s Procuratorate on Several Issues of Concrete Application of the Laws in Handling
Criminal Cases of Infringing Intellectual Property (2)” (April 2007) materially lowered thresholds related to companies to one-third their previous levels by abolishing the disparity between companies and individuals concerning thresholds related to intellectual property rights, including the unauthorized use of trademarks and unlawful reproduction of copyrighted works. Furthermore, of the thresholds related to “copyright infringements” stipulated in Article 217 of the Criminal Code, the reproduction mark standard was lowered from 1,000 to 500. As these demonstrate, a certain degree of improvement has been observed with regard to intellectual property rights. In the case of trademark infringement, however, the 50,000 yuan threshold is maintained. This is likely to be a factor that makes the criminal investigation of companies responsible for selling counterfeited trademark goods difficult.

These matters pose problems in terms of consistency with Article 41 of the TRIPS Agreement, which requires remedies that provide effective deterrent power, Article 61 of the TRIPS Agreement, which stipulates the application of penal measures related to the unauthorized use of trademarks at a commercial scale and the unlawful reproduction of copyrighted works, and similar articles. In April 2007 the United States filed a request for consultations over these points based on the WTO Agreement, and a panel was established in September of that year. Japan took part in this case as a third-party country. The Panel’s report was adopted by the DSB meeting in March 2009. Regarding the US’ claim on threshold values that “the commercial scale stipulated by China is in violation of Article 61 of the TRIPS Agreement and other provisions of the TRIPS Agreement”, the Panel dismissed the complaint on the illegality of stipulating a threshold value itself due to insufficient evidence presented by the US, but accepted the assertion that “commercial scale” was subject to change by market, product or other factor. The actual situation in China needs to continue to be monitored from the point of view of consistency with the TRIPS Agreement.

In terms of criminal transfer, “China’s Action Plan on IPR Protection 2010” states that transfer of suspected cases of trademark crime will be further regulated and strengthened. In addition, the “2012 National Intellectual Property Rights Strategy Enforcement Promotion Plan advocated the cooperative work of the administrative and the criminal justice systems on the infringement of intelligent property rights and the maintenance of the information sharing system between the administrative and criminal justice systems. Specifically, “Opinions on Several Issues Concerning Reinforcement of the Cooperative Work of the Administrative and Criminal Justice Systems” was presented by the State Administration for Industry and Commerce of China (SAIC) in December 2012. Japan will continue to pay attention to the existence of cases where criminal procedures are not fairly initiated, and ask the Chinese Government to strengthen educational activities for and monitoring of regional regulatory authorities.

(b) Local Protectionism

One of the major problems cited concerning control of intellectual property rights infringements in China is “local protectionism.” In particular, the officers in charge of regional administrative agencies lack a basic understanding of intellectual property (incomplete understanding of systems and treaties or simply ignorance of their existence). There are some cases where local authorities use their discretion in controlling these goods, or, in extreme cases, unofficially provide manufacturers of counterfeit and pirated products with information of a crackdown, because of an understanding that the manufacturer of counterfeit and pirated products brings profits to the local area. These actions impede speedy and accurate enforcement of intellectual property rights in China, and this is a problem in light of Article 41.1 of the TRIPS Agreement (on ensuring the availability of enforcement procedures under a Member’s law for effective action against any act of infringement). Cases where there are discriminatory effects in the recourse of foreigners and foreign companies could also cause problems regarding TRIPS Article 3.1 with respect to national treatment.

The Chinese Government has taken some positive actions to improve local government awareness
regarding intellectual property obligations such as implementing a special program to detect acts of infringement all over the country from October 2010 to June 2011. After the special program finished, in November 2011, the results were verified and a policy to continue thorough detection was announced. Furthermore, “opinions of the state council regarding further enforcement of detecting the act of infringement and the manufacturing and sales of counterfeit or poor-quality products (November 2011)” was expressed. However, many are of the opinion that local protectionism still exists in China. On the other hand, there are some local governments with a high level of awareness on IPR protection. In Guangdong, where counterfeit damage to Japanese companies is great, it has been reported that the Guangdong Provincial Administration has promulgated regulations for detecting counterfeit and implemented a unique initiative, the “three hit double option”. Japan needs to continue to ask the Chinese Government to strengthen educational activities for and monitoring of regional regulatory authorities to respond to cases suspected of being local protectionism.

(2) Issue of Bad Faith Filings

<Outline of the Measure and Concerns>
(a) Bad Faith Trademark Filings

It has been reported that there were many cases where Japanese companies' trademarks or characters were applied for and registered by third parties (bad faith filings). When such applications are publicly notified and registered, it can cause obstructions to the business operations of the rightful owners. Those obstructions may be demands to purchase the rights to trademarks and characters, commencement of unfair business operations using the registered and trademarked names, and indictments being filed against the original owners who entered the Chinese market with the State Administration for Industry and Commerce for violations of the trademark rights, etc. In cases where original owners submit requests for administration enforcement to the local offices of Administration for Industry and Commerce, producers of imitation goods protest that the applications for trademarks were submitted knowing that they were bad faith filings. Thus enforcement actions would be suspended until the trademark offices reach their determination on the legitimacy of the bad faith filings applications. This can cause situations where the original owners cannot promptly prevent injury caused by infringing goods.

Many Japanese companies are still being harmed by misappropriated applications of trademarks, and responding to it remains one of the important issues in China.

Japan has been requesting improvement on this issue at bilateral meetings between the two countries and also at opportunities that involve other countries. The Supreme People's Court promulgated “Opinions on several issues concerning maximizing functions of the intellectual property rights court, promoting significant development and prosperity of socialism culture and economic development through voluntary cooperation” (implemented in December 2011). This clarified that China will regulate unethical applications by appropriately ascertaining the intentions of trademarks, and that, in cases where an indictment for violation of trademark rights is filed against the initial owners, their counterargument of being the original users of the trademark rights will be acknowledged. In the framework of Five Trademark Offices (TM5), comprising the national trademark offices of Japan, the United States, Europe, China and the Republic of Korea, a project on bad-faith trademark filings was promoted under Japan’s initiative. As part of the project, “Laws and Examination Guidelines/Practices of the TM5 Offices against Bad-faith Trademark Filings” was published in December 2014, compiling

9 It refers to the application of trademark by a third party with the abusive intention by utilizing the situation where the trademark is not registered.
information on systems and practices of the respective countries/regions. At the TM5 meeting in December 2015, the offices agreed to prepare a collection of the latest case examples of bad-faith trademark filings observed at the respective offices, and in March 2016, a seminar was held in Tokyo to widely share these with users. At a meeting held in October 2016, a symposium on bad-faith trademark filings was held based on a proposal of China, and was attended by 200 people, mainly consisting of trademark users in China. Personnel from each office of TM5 delivered lectures on provisions based on which bad-faith trademark filings are rejected, the review process, case examples, etc., and answered questions from attendees. After that, academic experts introduced case examples of bad-faith trademark filings and registrations, and participants from companies spoke about their efforts to deal with bad-faith trademark filings. In addition, to prevent registration of bad-faith trademarks, the Japanese government has been making efforts to provide information on bad-faith trademarks prior to public notification to the Trademark Office of the State Administration for Industry and Commerce. Continuous close monitoring will be necessary to prevent the expansion of injury by bad faith filings and respond by utilizing the opportunities at bilateral consultations and multilateral frameworks in light of the purpose of Article 41 Clause 1 of the TRIPS Agreement (prompt action of rescue measures to prevent violations).

(b) Abuse of Misappropriated Applications/Non-Examination System on Inventions of Foreign Countries

Some Japanese companies reported that there have been many cases in China where patent applications and utility models for an invention or a design created in a foreign country have been submitted by a person other than the authentic inventor and a patent is granted by the patent office. In China, misappropriation is not recognized as either a reason for refusal or a reason for invalidation. Remedy is available only by requesting confirmation concerning the attribution of the relevant right (Articles 85 and 86 of the Implementation Regulations for the Patent Law). A prolonged period of court trial or administrative procedures for confirmation of the attribution of the relevant right will result in failure to prevent injury caused by infringing goods based on applications by a person other than the authentic inventor or creator. Japan has been encouraging China to effectively prevent such cases through the Government-Private Joint Mission to China for IP Protection of the International Intellectual Property Protection Forum and by exchanging opinions with the State Intellectual Property Office (SIPO), etc., in light of Article 41.1 of the TRIPS Agreement on expeditious remedies to prevent infringement.

Additionally, China has not adopted a substantive examination system either for utility models or designs (which are subject to substantive examination in Japan), and there is no obligation to submit a patent examination report created by the examiner to validate the rights when exercising them. This is one example of the lack of preventive regulations regarding the abuse of rights, and such lack is of strong concern to Japanese companies. Japan continues to make efforts in improving the situation by facilitating the understanding of differences in the systems through the framework of China-Japan-Korea Patent Office meetings and seminars in China, etc., and requesting China to make obligatory the submission of patent examination reports at the time of exercising the rights in public comments to seek amendment of the Patent Law, etc.

*The situation related to the protection of well-known trademarks was included in light of the following concerns despite the fact that it is a trade or investment policy or measure that does not expressly violate the WTO Agreements or other international rules.

Japan, the US and the EU commented during the WTO’s legislative review on the inadequacies of China’s protection for well-known trademarks in particular (an issue of great concern also to many other developed countries). In the past, the list of well-known trademarks in China only covered Chinese companies, which was counter to Article 3 of the TRIPS Agreement (national treatment). However, it is appreciated that at present foreign well-known trademarks are recognized as well-known marks in China.
However, based on Article 13 of the new Trademark Law of China enforced on May 1, 2014, obtaining approval of well-known trademarks requires the trademark being well-known to the public “within China”. In addition, Article 32 of the new Trademark Law of China, which can be used to prohibit infringement applications, also states that “trademarks that are already used by others and have a certain degree of influence shall not be registered in a dishonest manner” and, despite no clear statement of “in China”, this Law is considered to require that the concerned trademark shall already be used within China and have a certain degree of influence; therefore, the protection of trademarks that are well-known only in foreign countries has not been achieved. In order to suppress infringement applications, encouraging the introduction/utilization of information disclosure prior to public notification and introduction of provisions to refuse applications of well-known foreign trademarks (corresponding to paragraph 1, Article 4 of the Trademark Act of Japan) is considered desirable. Meanwhile, new paragraph 2 added to Article 15 of the new Trademark Law provides that an application shall be refused by filing an objection, in cases where an agreement or trading relationship is concluded with another party and a third party who clearly knows of the existence of the trademark used by such party applies for a trademark registration for goods of the same kind or for similar goods. Attention will be paid to future enforcement.

(For protection of well-known trademarks under the Anti-Unfair Competition Law, see the column “Major Laws and Regulations Related to Intellectual Property” 4. below)

(3) Licensing Regulations on Patents and Know-How

Outline of the Measure>

China regulates contracts approving patent exploitation (so-called licensing agreements) between foreign and Chinese companies through the Technology Introduction Contract Administrative Ordinance, the Technology Introduction Contract Administrative Ordinance Application Rules, and the Technology Export and Import Contract Registration Administrative Statute.

Problems under International Rules>

Through the accession negotiations, the problematic provisions of China’s licensing system were amended and now are closer to conforming to the TRIPS Agreement with the enforcement of the Technology Exports and Imports Administrative Ordinance (hereinafter referred to as the “Administrative Ordinance”), etc. While China’s efforts to make improvements should be acknowledged, a number of restrictive clauses and mandatory warranties contained in the Administrative Ordinance are subject to concern from the point of view of Article 3 of the TRIPS Agreement (national treatment) in relation to Article 28(2) of the same Agreement with respect to the right of patent owners to conclude licensing contracts.

The section below notes several issues in possible contravention of the TRIPS Agreement.

(a) Actuality of Royalty Regulations

Before 1993, under the “principles of instruction for conclusion of technology-introduction contracts and permit assessment”, the maximum royalty rate was 5% of net sales. Although this rule has already been abolished, there are some cases where controls are still imposed on the maximum royalty rate or contract terms due to administrative instructions by local government during the process of assessment for establishing joint venture enterprises or the procedure for registering technical licensing contracts. It is assumed that, in establishing joint venture enterprises, foreign enterprises are licensors in most cases. Regulating licenses in terms of royalty rate can be inconsistent with Article 3(1) of the TRIPS Agreement, obligation of national treatment, although it can affect the right of patent owners to conclude licensing contracts.
Part I: Problems of Trade Policies and Measures in Individual Countries and Regions

(b) Ownership of Improvements (Article 27 & 29(3) of the Administrative Ordinance)

Article 27 of the Administrative Ordinance states that improvements in the licensed technology belong to the improving party. In addition, Article 29(3) of the said Ordinance prohibits the party providing technology from restricting the party receiving the technology to make improvements in the technology provided through licensing or other means, or to use the improved technology.

In contrast, for domestic technology transfer or licensing contracts, Article 354 of the Contract Law of China stipulates that parties may contractually provide for the method of sharing technological achievements resulting from improvements. No mandatory provisions, such as those provided for in the Administrative Ordinance, exist. In addition, Article 355 of the Contract Law provides that, if laws or administrative regulations set separate provisions for technology import and export contracts, patent contracts or patent application contracts, such provisions shall govern. This handling indicates that the Administrative Ordinance, which is a special law, is applied with priority to license contracts that fall under technology import and export while Article 354 of the Contract Law of China is applied to other ordinary domestic technology transfer or licensing contracts.

In many cases of technology import and export subject to the Administrative Ordinance, foreign companies are assumed to be the parties providing the technology. The Ordinance providing that improved technology belongs to the party who has made the improvement irrespective of agreements among the parties may be inconsistent with Article 3(1) of the TRIPS Agreement, obligation of national treatment, because mandatory provisions are applied only to foreign companies providing the technology and therefore can be a measure that discriminates between Chinese and foreign technology transfer.

(c) Licensor Liability (Article 24 of the Administrative Ordinance)

Where a licensee, or party receiving technology, with regard to technology import and export is sued by a third party for infringement of a right as a result of using technology provided through licensing or other means, the licensor was obliged to respond under the old ordinance (the Technology Introduction Contract Administrative Ordinance and the Technology Introduction Contract Administrative Ordinance Application Rules). However, the obligation to respond ceased with the abolition of the old ordinance. However, Article 24(2) of the Administrative Ordinance still provides for the obligation to cooperate in responding to a third party’s claim for infringement of a right. Furthermore, Article 24(3) of the Administrative Ordinance provides, in the same manner as the old ordinance, that “If the recipient party in a technology import contract uses the technology provided by the supplier according to the agreement in the contract, and such use results in the infringement of a third party’s legal rights and interests, then the supplier assumes responsibility.” For example, where the licensee infringes a third party’s legal rights and interests as a result of using the licensed technology by usage that does not follow the contract, the licensor could be exempted from liability. However, the licensor will have to respond in some way to its liability for infringement against the third party, even for matters in which it is not involved, until exemption from liability becomes clear.

On the other hand, the Contract Law of China (Article 353), which governs contracts between Chinese companies, provides that liability for compensation in the case of infringement of a third party’s rights and interests may be separately provided for by a contract between the parties.

Therefore, as mentioned above, the provision in the Administrative Ordinance that the supplier bears certain obligation and liability for infringement of a third party’s rights and interests irrespective of agreements between the parties can be inconsistent with the national treatment obligation set forth in Article 3.1 of the TRIPS Agreement, as a measure that discriminates between Chinese and foreign technology transfer.
(d) Guarantee of Completeness, etc. of Provided Technology (Article 25 of the Administrative Ordinance)

In the same way as the old ordinance, Article 25 of the new Administrative Ordinance still contains a provision to the effect that the party providing technology shall guarantee that the technology provided is complete, free from defects, and effective, and can achieve the contractual technological goal. Therefore, for the parties providing the technology, it can obstruct the conclusion of licensing contracts because compulsory performance might be forced on the party providing technology to achieve the technological goal.

In this manner, foreign persons providing technology are still in the situation where they inevitably become wary of providing technology. Japan will request that China further clarify the Administrative Ordinance and promote deregulation. Also, Japan needs to continue to monitor the operation of the authorities that register and administer or permit international licensing contracts, etc., including differences in the regulations governing licensing contracts and other technology provision contracts concluded between Chinese companies.

<Recent Developments>

China was subject to TRIPS Council transitional reviews (China TRM) for eight years after the accession in December 2001 in accordance with a provision in the Accession Protocol for the purpose of verifying its compliance with the TRIPS Agreement, both with respect to improving and operating its domestic legal system and enforcement system. The last review was conducted in October 2011. At the TRIPS Council China TRMs conducted in October 2009 and October 2011, Japan set forth the aforementioned areas where further improvements were needed and especially pointed out the importance of enforcement with respect to counterfeits, piracy and other infringements of intellectual property rights. The United States and the EU made similar comments on the need to improve this enforcement.

Japan has requested improvement on intellectual property issues, centering on enforcement, at various meetings, such as the meetings held with the chief of State Administration for Industry and Commerce of China (SAIC) (May and December 2011, May 2012), bilateral meetings with the State Intellectual Property (SIPO), the Trilateral Policy Dialogue meeting among Japan, China, and the United States, and also at the high-level mission (September 2012) with the International Intellectual Property Protection Forum (IIPPF), which takes measures against cross-border imitation and pirated goods by private enterprises. Additionally, the “memorandum of cooperation and exchange for intellectual property rights protection” was exchanged between the Ministry of Economy, Trade and Industry of Japan and the Ministry of Commerce of China at the Japan-China High-Level Economic Dialogue in June 2009. Based on the memorandum, in November 2009, October 2010, October 2011, May 2015 and June 2016, a meeting of the Japan-China Intellectual Property Rights Working Group was held. Japan exchanged opinions with the Chinese government on a wide range of issues regarding intellectual property rights protection. In August 2009, the “memorandum of cooperation on intellectual property rights protection” was concluded between the Ministry of Economy, Trade and Industry of Japan and the State Administration of Industry and Commerce of China (SAIC). Based on the memorandum, in July 2010 and January 2012, meetings of the Japan-China counterfeit office working group were held. At meetings, Japan exchanged opinions with the State Administration of Industry and Commerce of China (SAIC) regarding violations of trademark rights and of the Law against Unfair Competition of China. Based on the same memorandum, in January 2012, the Japan-China Trademark Administrators Conference was held. Japan exchanged opinions with the State Administration for Industry and Commerce of China (SAIC) regarding the status of the discussion on the amendment of Trademark Law of China, the standards for trademark attorneys and problems relating to trademark applications and registrations by
third parties (the problem of infringement applications). Japan will continue to monitor the status of developments in the intellectual property legislative system in China as well as operation of the system at various opportunities of bilateral discussions, and to take actions to rectify problems as situations arise.

In order for the Chinese Government to strengthen its enforcement, it is necessary to simultaneously improve the capacities of individual Chinese Government agencies. It is with this in mind that Japan provides support by accepting trainees and dispatching experts, as well as hosting various seminars. Assistance provided by Japan to China for the improvement of its legal system has included exchanges of opinions pertaining to revisions to the patent law and trademark law. What is important from a medium- to long-term perspective is creating a wide-ranging program to work on the development of specialized human resources in the judicial branch and the administrative branch responsible for examination and enforcement, and to conduct educational activities to communicate the need for respect and protection of intellectual property to the general public.

The private sector conducted various activities, with the view of encouraging, and cooperating with, the Chinese authorities to further address the issues, including: requesting for crackdown and providing information company by company; strengthening enforcement capacity by the IIPPF, a cross-industry organization; and working through the Quality Brand Protection Committee (QBPC) with participants including European and American companies. In order to support such activities, JETRO provides varied information to Japanese companies, and has established consultation offices in Beijing, Shanghai, and Guangzhou as a mediator with the Chinese Government. It is important for the Government of Japan itself to encourage the vigorous activities of private companies, and to provide necessary support for the further promotion of efforts.

With regard to regulations on licensing, etc. of patents, know-how, etc., Japan has requested China to clarify the application of the Administrative Ordinance at the China TRMs of the TRIPS Council. China responded at the 2008 Council meeting that “the transferring party is not liable as long as the user used the item in an appropriate environment and manner.” During the last review, conducted in October 2011, Japan pointed out the discriminatory regulations in the Ordinance. China, however, replied that discriminatory regulations do not exist in the Ordinance. Also, at the industry-academia-government study meeting on the Free Trade Agreement (FTA) among Japan, China and Republic of Korea (the 3rd meeting held at the beginning of December 2010 and the 7th meeting in December 2011), Japan pointed out that the Administrative Ordinance and other regulations on technology transfer, including discriminatory treatment in relation to the liability for guaranteeing infringement against a third party, are disincentives to investment in China. It is important for Japan to continue to encourage further clarification of the Administrative Ordinance and deregulation through such bilateral/multilateral consultations, etc.

**COLUMN**

**MAJOR DEVELOPMENTS OF LAWS AND REGULATIONS RELATED TO INTELLECTUAL PROPERTY**

1. **PATENT LAW (AMENDED OCTOBER 2009)**

   The “Patent Law”, which was adopted at the 6th Standing Committee of the National People's Congress in March 1984, regulates protection of patents, inventions and designs. The third amendment of this law is currently in effect.

   The Legislative Affairs Office of the State Council announced a draft for referral regarding the latest...
proposal for the fourth revision in December 2015, and Japan submitted its views on December 25 of the same year. The proposal for the revision is currently under discussion at the Legislative Affairs Office of the State Council. Notably, the proposal includes administrative seizure of patent infringement, introduces the punitive damages system for stronger enforcement, introduces the partial design system, and extends the protection period for design rights (to 15 years), etc. The remaining issues include that [1] an act of export is not prescribed as an act of infringement, [2] utility models and designs are registered with only preliminary examination and there is no obligation to submit a patent examination report even when disputes occur, and that [2] no provisions provide that when an invalidation decision of utility model registration becomes final, those exercising the rights without being based on a report of utility model technical opinion or otherwise taking reasonable care bear responsibility for damages caused by exercising the rights, etc.

The Patent Law was included in the State Council Legislative Plan for 2016, published on April 13, and is expected to be given priority for its establishment.

In addition, the State Intellectual Property Office (SIPO) promulgated the Revised Patent Administrative Law Enforcement Measures on May 29, 2015, and they came into effect on July 1 of the same year. The major revisions included: (i) prompt publication of administrative decisions and issuance of law enforcement information were clearly stipulated; and (ii) in order to strengthen patent protection, the time limit for processing patent infringement disputes was shortened further (the time limit for resolving a patent infringement dispute pertaining to an issued patent or utility model was shortened from “resolved within four months from the filing, and extended by one month in the case of a complicated case” to “resolved within three months from the filing, and extended by one month in the case of a complicated case”). In 2016, Several Opinions on Stringent Protection of Patent, Guidelines for Patent Administrative Enforcement, Guidelines for Patent Infringement Determination, Rules for Evidences in Patent Administrative Enforcement, and Guidelines for Patent Dispute Administrative Arbitration were published and became effective.

2. TRADMARK LAW (EFFECTIVE MAY 2014)

The Standing Committee of the National People's Congress decided on an amendment of the Trademark Law (established in August 1982) in October 2001; it became effective in December of the same year. Furthermore, the new Trademark Law was adopted and put into effect in May 2014. The new Trademark Law aims to improve convenience for the applicant, maintain market order for fair competition, and reinforce trademark protection, etc. Specifically, it provides: a time limit on trademark examination (completing trademark examination within nine months, etc.), changes to the opposition system (trademark registration immediately takes place when oppositions are rejected), prohibition of advertising or promotional use of well-known trademarks, prohibition of bad faith filings by those having contract/business relationships, etc., reinforced protection of exclusive rights to use trademarks (raising the amount of statutory damages from 0.5 million yuan to 3 million yuan, and introduction of punitive damages), and standards for trademark agency business (establishment of penal provisions), etc.

The new Trademark Law contains many positive provisions. Considering the actual situations in China, where a very large number of misappropriated applications still exist, however, there still remain a number of issues, including those regarding the requirement that infringement application measures that trademark registration take place immediately after oppositions are rejected reduces opportunities for challenging infringement applications (or acts of Japanese rights holders may (formally) become infringement at an early stage), and that foreign well-known trademarks are not considered a reason for refusal of application.

Therefore, Japan needs to pay attention to the operations based on the new Trademark Law in the
future.

3. COPYRIGHT LAW (EFFECTIVE APRIL 2010)

The “Copyright Law”, effective in April 2010, is scheduled to be revised shortly. The Legislative Affairs Office of the State Council announced an opinion collection draft in January 2013, and the China Japanese Chamber of Commerce and Industry submitted comments on March 1 of the same year. The opinion collection draft includes provisions that can contribute significantly to the reinforcement of intellectual property rights protection, including raising the amount of administrative penalties, enabling the selection of calculating methods for the amount of damages in judicial remedies, raising the upper limits of the amount of statutory damages, stipulating penal provisions, reinforcement of the means for evidence collection through the courts, deleting the requirement of “infringement of public interest” from the requirements for executing administrative actions, and providing regulations regarding circumvention of technological protection measures and provisions concerning manipulation of rights management information, etc. applicable to radio/TV programs, etc. However, further improvement is desirable regarding the provisions concerning group-based management of copyrights, obligation to reward employees for work/performance for hire to be in place, and cases where the copyrighted work can be used without the permission of the copyright holder are broadly included, etc.

The Copyright Law was included in the State Council Legislative Plan for 2016, published on April 13, as with the Patent Law and is expected to be given priority for enactment.

4. ANTI-UNFAIR COMPETITION LAW

The State Council Legislative Plan for 2016, announced on April 13, 2016, raised up the status from preparatory item to the holistic reform item that requires urgent action, thus it is expected that the act will be amended in near future.

Despite the fact that the market environment has greatly changed since the enactment of the act, the Anti-Unfair Competition Law has not been amended, and its consistency to other laws and regulations, including trademark law etc., which have been amended over the times, have raised concerns. The draft amendment for referral, which was published on February 25, 2016 included amendments to 30 provisions out of existing 33 provisions, of which 7 were deleted and 9 were added. The draft amendment therefore contains 35 provisions.

Of those unfair competitive acts relating to counterfeit goods, Article 5 stipulates the examples of market-distortive acts as: i) unauthorized use of famous trademarks of others or similar; ii) salient use of famous trademarks of others or similar trademarks of oneself; (iii) use of registered trademarks or unregistered famous marks to the business names of firms; and, (iv) use of the characters or abbreviations of well-known firms and group companies to the character marks or the main parts of the domain.

With regard to the legal liability, Article 18 establishes the punishments to the violation of trademarks (Article 5), and according to which, it provides the orders for suspension, confiscation of illegal goods, and peculiar penalties (less than five times of profits that are attributable to the illegal operation where those are more than 50,000RMB, less than 250,000RMB where the profits that are attributable to the illegal operation, or more than 100,000RMB and less than 1 million RMB depending upon the situation for cases which the profit that are attributable to the illegal operation is incalculable), and repeal of business license.

Furthermore, if the entity is engaged in production, sales, maintenance, transport, network services, technical support, advertisement, and payment services by knowing such act is unfair competitive acts, the entity will bear a peculiar punishment of more than 100,000RMB and less than 1 million RMB depending upon the situation (Article 28). In addition, Article 30 establishes the peculiar punishment
of more than 20,000 RMB and less than 200,000 RMB for cases of denial of providing related documents and/or situations during the investigation, providing false documents and/or situations, suppression, disposal or removal of evidence, or any rejection and/or inference to investigative acts.

The draft amendment was adopted during the ordinary meeting of the State Council on November 23, 2016, and it was decided to deliver the draft amendment to Standing Committee of the National People’s Congress. The Standing Committee of the National People’s Congress announced the draft amendment with added modifications, and announced its revised draft amendment was put into public comments from February 26, 2017 (public comment was open until March 25, 2017).

5. Administrative Measures on Internet Transactions (Effective March 2014)

The obligations of managers, etc. of businesses that provide internet commodity transactions and related services (including third-party transaction platform businesses) were set with the aim of sound development of internet commodity transactions; it has been in effect since July 2010 as the Provisional Administrative Measures on Internet Commodity Transactions and Related Services. An opinion-collection draft regarding the proposal for its revision was initiated in September 2013, and the revised Measures were put into effect in March 2014 as Administrative Measures on Internet Transactions. The obligations of managers of third-party transaction platform services that are of particular interest to the rights holders include protection of trademark rights, etc., cooperation in regulating illegal acts on the Internet (including trademark infringements and acts of unfair competition), and establishment of a credit assessment system. However, there is no obligation that users of the platform services who are infringing intellectual property rights provide information. Other notable provisions include that a natural person who is engaged in internet commodity transaction business without meeting the conditions of business registration must carry out business activities through a third-party transaction platform, and that the Administration for Industry and Commerce can conduct on-site inspection and examine relevant data/documents, including written contracts and accounts, etc. when internet commodity transactions suspected of being illegal, etc. are subject to seizure.

The Japanese government needs to determine the legal and other means available to the rights holders under this Administrative Measures and conduct activities to make the content known to Japanese companies, etc.

These provisions provide measures to make a list of “those having abilities but who do not execute determined duties of effective legal documents” and broadly disclose it to the public as a punishment, thereby imposing practical restrictions on borrowing, etc. by those included in the list; it is expected to improve the situation many rights holders are faced with today where they have won intellectual property rights lawsuits, but action has not been taken against the other parties.

Formerly, important trial cases were not necessarily disclosed, and this has been an issue from the point of view of transparency (required by Article 63 of the TRIPS Agreement), as well as in practice causing difficulties in analyzing/discussing legal systems in China. Significant improvement will be made with implementation of these provisions. These provisions were promulgated with amendment on
August 2016, and expanded and/or clarified the scope of the documents to be disclosed on internet to judgments, decisions, orders of payment, and administrative arbitrations etc.

8. **Regulation on Abuse of Intellectual Property Rights under the Anti-Monopoly Law**

The State Administration for Industry and Commerce of China (SAIC) promulgated “Provisions on Preventing Abuse of Intellectual Property Rights to Eliminate or Restrict Competition” (Circular No. 74 of SAIC) on April 7, 2015: the provisions came into effect on August 1, 2015. Also, the National Development and Reform Commission released the “Anti-Monopoly Guidelines on Abuse of Intellectual Property Rights (opinion collection draft)” on December 31, 2015. Its future developments need to be closely watched.

**Government Procurement**

**Commitments Upon Accession**

WTO Members are not required to become signatories to the Agreement on Government Procurement (GPA). This is a plurilateral agreement and only those countries that accede are bound by its rules. Therefore, only a subset of countries, mainly developed countries, has have acceded to the GPA. At the time of its accession to the WTO, China committed to accede to the GPA in the future and to working to ensure transparency in government procurement procedures as well as to provide MFN treatment when procuring from foreign countries. China has already been an observer of the Agreement in February 2002.

China submitted its application for the accession to the GPA and its initial offer in December 2007. Accession negotiations have taken place since 2008. However, various problems with the initial offer were pointed out, and other countries requested early submission of a revised offer. In response to this, China submitted four revised offers in July 2010, November 2011, November 2012, December 2013, and December 2014, but it was pointed out that the contents of the revised offers still were inadequate. China is expected to submit a new offer for further improvement.

**Status of Implementation**

To prepare for future accession to the GPA, China enforced the People’s Republic of China Government Procurement Law in January 2003.

The law has provisions concerning coverage (procurement entities, products, etc.), procurement methods (open and competitive bidding, etc.), procurement procedures, complaint filing procedures, etc. In the context of China’s accession to the GPA, close monitoring needs to be performed as to whether the Government Procurement Law and other related laws and regulations of China are consistent with commitments under the GPA.

10 Report of the Working Party on the Accession of China (WT/ACC/CHN/49), Protocol on the Accession of the People’s Republic of China (WT/L/432)
11 GPA/ACC/CHN/1
12 GPA/ACC/CHN/16
13 GPA/ACC/CHN/30
14 GPA/ACC/CHN/41
15 GPA/ACC/CHN/44
16 GPA/ACC/CHN/45
The China WTO Dispute Settlement System (China's Accession to the WTO and China’s Administration Response to WTO Dispute Cases)
magnesium, manganese, zinc and silicone metal; also, bound levels in compliance with the Protocol are maintained for zinc and yellow phosphor.). This is one of the good examples where trading partners utilized WTO dispute settlement procedures to achieve correction of China’s measures, and it is also notable that China did not make it a political issue but earnestly responded consistent with the WTO rules. In addition, with regard to the requests for WTO consultations and establishment of a panel regarding export restrictions against raw materials such as rare earth minerals submitted by Japan, the US and the EU in 2012 (DS431, 432, 433), China also responded to the Panel and the Appellate Body reports, which fully accepted the claims of Japan, the US and the EU, and lifted the quantitative export restrictions in January 2015. China also abolished export tariffs on May 1, 2015.

As China is conforming to decisions by the WTO Dispute system as described above and is showing willingness to respect the rules, it is expected to be a primary player in the enforcement of the rules in the world. However, there remain several questionable measures relating to international rules, and it is hoped that China will act responsibly as one of the primary countries that support global international trade systems.
