# **Chapter 3** Promoting inward direct investment

The expansion of inward direct investment will assist in improving productivity and creating employment in Japan, through inflows of management resources such as management know-how and techniques, as well as personnel. In particular, given the high level of technical skills in Japan, including among its SMEs, attracting foreign enterprises is extremely important from the perspective of promoting open innovation and revitalizing local economies. However, our nation's inward direct investment balance has experienced sluggish growth since peaking in 2008 and Japan's inward direct investment as a proportion of GDP compares very unfavorably with the figures achieved by major developed countries and emerging economies in Asia (Figures III-3-1-1 and III-3-1-2).

Internationally, the competition to attract foreign enterprises has intensified further in recent years, so to attract global enterprises, it is necessary for all parts of the government to work together to develop a business environment comparable with that of other countries, by endeavoring to enhance the investment environment for global enterprises, as well as improving the living environment for foreign nationals. To this end, the government has put together the new growth strategy, entitled "Japan Revitalization Strategy – JAPAN is BACK" (approved by the Cabinet on June 14, 2013), which contains three action plans. One of these, the Strategy of Global Outreach, which aims to ensure that Japan can tap into expanding international markets, stipulates that the government will activate inward direct investment. This strategy states that the government will promote thorough globalization throughout Japan and will aim to double the inward direct investment balance to ¥35 trillion (from ¥17.8 trillion at the end of 2012) by 2020, in order to create employment and innovation by attracting outstanding overseas personnel and technologies to Japan.

Accordingly, to draw more foreign money and technologies into Japan, the government will make effective use of the National Strategic Special Zones in developing the world's most user-friendly business environment for companies. Such environmental improvements will also help to bring back Japanese-affiliated companies that have relocated overseas. On May 1 this year, the government designated six National Strategic Special Zones and has just approved the policy for each zone. In the Tokyo and Kansai zones, which are extensive metropolitan zones, the government intends to implement comprehensive regulatory reform, turning them into centers for international business and innovation that will become hubs for attracting talent, capital, and technology from around the world. Moreover, the Niigata City, Yabu City (Hyogo Prefecture), and Fukuoka City zones will become centers for the reform of the bedrock of Japan's regulatory regime, in such fields as agriculture and employment, with the aim of turning them into gateways for promoting the liquidation of farmland and offering powerful support for startups and entrepreneurship. Furthermore, in these six National Strategic Special Zones, including Okinawa Prefecture, which has immense tourism resources, the national government, local governments, and the private sector will work in partnership to put together specific business plans.

To fundamentally strengthen government systems for attracting and supporting foreign enterprises, the government will bolster the industry specialist functions of the Japan External Trade Organization (hereinafter "JETRO") and develop support measures for global enterprises, aiming to identify and

attract promising foreign enterprises with reference to the management strategies of individual companies, adopting a mindset similar to that of executives from global enterprises (Figure III-3-1-4). In addition, the government will strengthen the comprehensive support system for foreign enterprises by having JETRO handle all queries regarding such matters as the systems and administrative procedures required when preparing plans for investing in Japan, as well as dealing with requests for regulatory reform. Under this system, JETRO will respond to queries and requests individually, working in collaboration with relevant ministries and agencies (Figure III-3-1-5).

Offering direct incentives to global enterprises is an effective means of improving Japan's appeal as a destination for investment. Accordingly, in FY2014, the government will implement the Subsidy Program for Projects Promoting Foreign Direct Investment, Site Location and Regional Development in Japan, which supports the development of bases by companies that are operating an actual business in multiple countries, including Japan, or which are based in Japan and are targeting overseas markets. In addition, under the Act on Special Measures to Promote Research and Development Business, etc. by Specified Multinational Enterprises (Act for Promotion of Japan as an Asian Business Center; entered into force in November 2012), the government will continue to take such measures as alleviating the corporation tax burden and reducing patent fees for global enterprises engaging in research and development business or supervisory business (Figure III-3-1-6).

Furthermore, the government has gathered information about cases of Japanese SMEs that are successfully undertaking investment alliance with foreign companies, and has used this to compile a publication entitled "Case Studies of Investment Alliances" (Japanese companies' point of view), which describes advantages gained from investment alliance, such as expanding marketing channels both within Japan and overseas, as well as the risks that can arise from such alliance, including the loss of employees. It also details the key points and areas of caution to be borne in mind when engaging in investment alliance. The government is promoting the widespread use of this anthology of cases, in the hope that it will be of assistance to the proprietors of Japanese companies when they are formulating a new management strategy.

In addition to these measures, the Agenda for the Evolution of the Growth Strategy (approved by the Industrial Competitiveness Council on January 20 this year) states that, to assist in the realization of further specific measures aimed at improving the business environment, requests, etc. received from senior managers at foreign enterprises concerning institutional reforms for improving the investment/living environment in Japan will be addressed at the highest levels of government and a system for promoting efforts to manage progress in dealing with these issues will be established, to facilitate the implementation of concrete measures through government-wide initiatives. At the first meeting of the Council on Economic and Fiscal Policy (held on January 20 this year), the Prime Minister instructed the members of the Council to listen to the opinions of the managers of foreign enterprises and to summarize the challenges that must be overcome in order to encourage foreign direct investment in Japan. At the Expert Group Meeting on Foreign Direct Investment in Japan (hereinafter "the Expert Group Meeting") (five meetings held, starting on February 27 this year), which was organized in response, interviews with foreign enterprises took place and the issues they

faced were summarized.

Amid this situation, in response to an instruction from the Prime Minister at a joint meeting of the Council on Economic and Fiscal Policy and the Industrial Competitiveness Council (April 4 this year), approaches to foreign enterprises by the government as a whole – including JETRO, diplomatic missions overseas, and Cabinet ministers – were fundamentally strengthened. In addition, the Cabinet-level meeting "Council for Promotion of Foreign Direct Invest to Japan" was established to deal with institutional reforms that will help to expand investment in Japan, taking into account the needs of foreign enterprises. As well as serving as a control tower for efforts by JETRO and diplomatic missions overseas to identify prospects and attract them to Japan. Invest Japan will listen directly to the opinions of senior managers from foreign enterprises and encourage initiatives by relevant ministers and consultative bodies aimed at bringing the necessary institutional reforms to fruition.

Thus, aiming to create innovation through new stimuli, and to improve productivity and achieve regional economic revitalization, the government will undertake cross-cutting institutional reforms and conduct even more proactive efforts to identify prospects and attract them to Japan, working in partnership with JETRO, diplomatic missions overseas, and forward-thinking local governments. In addition, it will promote top-level sales pitches by the Prime Minister and Cabinet ministers to encourage foreign direct investment in Japan.

# Figure III-3-1-3 Promotion of inward foreign direct investment

- \*Foreign direct investment position against GDP is 54.3% for the United Kingdom, 16.9% for the U.S. and 12.4% for ROK, and only 3.8% for Japan. Japan's foreign direct investment is extremely low by international standards.
- Competition for the business of foreign companies has intensified worldwide, and it is important for Japan to promote foreign direct investment, in which it lags behind other countries. Promoting inward direct investment would stimulate open innovation and also energize local economies
- •The Conference on Promoting Foreign Direct Investment in Japan takes the initiative in reforming regulations and systems based on the opinions of foreign companies and promotes to attract foreign companies in collaboration with JETRO, foreign diplomatic missions and forward-thinking local governments to achieve as much success as possible.

### Government's "Control Tower" Function (Establishment of a Ministerial Meeting)

#### Establishment of the Conference on Promoting Foreign Direct Investment in Japan (\*)

- To directly sound the opinions of managers of foreign companies, the Conference discusses required regulations and system reforms in collaboration with relevant ministers and other committees.
- JETRO and foreign diplomatic missions find prospective investment projects, and the Conference determines policies for investment in Japan and manages the progress.
- (\*)The Prime Minister directed the establishment of the Conference at the second joint meeting of the Council on Economic and Fiscal Policy and the Industrial Competitiveness Council (April 4, 2014). The first meeting of the Conference was held on April 25, 2014.

## Product Development (Promotion of Structural Reform, etc.)

# Promotion of Regulation and System Reforms and Utilization of Special Zones

- The Conference on Promoting Foreign Direct Investment in Japan and related committees collaborate to accelerate discussions on regulation and system reforms to improve the investment environment.
- Strengthening and collaborating with special national strategic zones, etc.

#### Providing investment incentives

 Financial assistance for the expenses of developing bases and easing tax burdens

# Business Operations (Creation of Investment Projects)

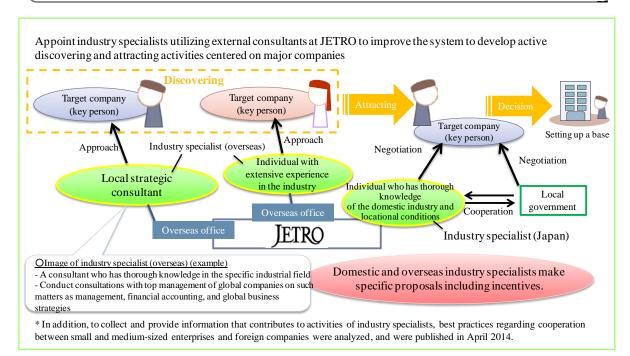

#### Strengthening Invest in Japan Activities (Finding, approaching and supporting foreign companies)

- Invest in Japan Activities by JETRO and foreign diplomatic missions
- Top-level sales by the Prime Minister and cabinet members.
- Strengthening of collaboration with local government that actively attract foreign companies
- Deepening understanding concerning investment partnerships between foreign companies and medium-sized enterprises and SMEs and support for matching them

# Figure III-3-1-6 Overview of Act for Promotion of Japan as an Asian Business Center < Came into effect in November 2012>

#### Background

OJapan's market has decreased in relation to the economic growth of emerging economies, and due to enhanced assistance measures to attract foreign companies to Asian emerging economies, global companies have, one after the other, withdrawn from Japan, so that Japan has lost its position as a base for international business activities in the Asia region.

### Act overview

OTo promote attraction to use Japan as an Asian headquarters or research and development base for global companies, measures will be taken, such as reductions in patent fees and reduction of corporate tax burdens, for global companies that receive accreditation from the cabinet minister in charge

#### Measures overview 1. Applicable business activities OGlobal companies, which receive accreditation conforming to the basic policy stipulated by the minister in Targets charge, will take assistance measures for research and development projects and general business\* performed as new domestically. # Column 14 Initiatives to promote the acceptance of foreign human resources with advanced expertise

Foreign enterprises with bases in Japan face various issues, such as the status of residence of their foreign staff in Japan and the ability of the spouses of those employees to work here. Japan has a stock of around 200,000 foreign workers capable of working in specialist/technical fields, and the Japanese government has stipulated a policy of proactively accepting such personnel. Due in part to the impact of the Lehman Shock and the Great East Japan Earthquake, the number of new entrants had been declining in recent years, but began to increase once more in 2012.

Accordingly, in May 2012, Japan introduced a points-based system of the kind used in the UK, Canada, and Australia, as a means of promoting the acceptance of highly skilled foreign professionals, in order to encourage the acceptance and retention of foreign nationals who can bring innovation to Japan. Unlike the "entry-type" points-based systems used in the UK and Canada, which specify entry requirements, Japan's points-based system grants preferential treatment in terms of immigration control to those foreign workers who already have a status of residence in a specialist/technical field that allows them to work and who score at least 70 points under a scoring system that assigns points for such factors as their academic background, work history, annual income. This preferential treatment includes reducing the number of years that they must have spent in the country before being eligible to apply for permanent residence, and permitting their spouses to work. In that sense, it is similar to ROK's points-based system.

By May 2012, 11 months after the points-based system had been introduced, only around 430 foreign nationals had been recognized as highly skilled professionals, so the Ministry of Justice and other related ministries began working on revising the system as soon as possible. In addition, the targets in the Japan Revitalization Strategy published in June 2013 included "reconsider the income standards ...and...start the new system within the year."

Based on these outcomes of the government's deliberations, the revised points-based system began operating at the end of 2013 and the number of those recognized as highly skilled professionals is now much higher than it was when the system was first introduced, thanks to such changes as the relaxation of the income standards.

In addition, the Immigration Control and Refugee Recognition Act reform bill was submitted during the 186th session of the Diet, to implement the measures required to shorten the period for which highly skilled foreign professionals must stay before they can be granted permanent residence (a status of residence with an unlimited period of stay).
