I. Purposes and Usages of this Guidance

1. Purposes of this Guidance

Major nations in the world, including Japan, have set up an export control framework internationally in order to prevent countries of concerns and entities, including terrorists, from obtaining weapons or technologies/ goods that have potential to be diverted to military use. By doing so, the international community strictly controls them in a coordinated manner.

Under the common recognition that effective export control is also necessary for academic and research institutions engaging in state-of-the-art R&D efforts, METI works with Ministry of Education, Culture, Sports, Science and Technology (hereinafter “MEXT”) and other organizations to hold briefing sessions and raise awareness of aforementioned issues and concerns.

By streamlining what academic institutions should conduct to manage their transfer of technologies pursuant to the Foreign Exchange and Foreign Trade Act (Act No. 228 in 1949, hereinafter, “FEFTA”), METI, in cooperation with MEXT, developed this Guidance in 2008, with the amendments in 2010 and 2017 (according to the partial revisions of FEFTA in 2009 and 2017 respectively), aiming to encourage the establishment of an effective compliance framework and enhance the control standards over sensitive technology information.

Due to the increasing concern over the sensitive technology outflow cases in regard to security export, academic institutions need to comply with the legally required “compliance requirements for exporters” and also take more appropriate sensitive technology control actions further promote globalization, including international human interactions and joint R&D cases.

Security Export Control constitutes a part of (legal) compliance at academic and research institutions. It should be kept in mind that the legal violation may lead to punishment for these institutions. In conducting international human interactions and joint R&D, there is a potential to unexpectedly get in trouble unless the appropriate (internal) export control structure has been established.

The purpose of this revision implemented by METI is to enable universities and research institutes to manage sensitive technologies soundly in accordance with the modified Ministerial Ordinance for Defining Compliance Requirements for Exporters and the clarification of “deemed export control” in 2021.

In this guidance, the sections to be referenced as well as the basic verification procedures for transfer of technologies and export of goods, including outline of the system in association with FEFTA, the verification procedures for various cases, establishing/operating organizational structure, are provided depending on the needs of the academic and research institutions. Additionally, it is so configured to ensure implementation of the required procedures at each academic or research institution by sorting out required/recommended efforts along different cases including administration of international students and overseas trips, as well as providing compliance program and form samples. Referring to this Guidance, academic and research institutions are expected to ensure solid implementation of the control of sensitive technologies as well as promote understanding of the significance of the regulations and control of the technologies across all levels of the organization, including senior staff, students and other staffs.

As reference materials in implementing what are described in this Guidance at relevant institutions, the Japan Society for Intellectual Production (an NPO) has published “Guidelines for Establishing/Operating Voluntary Control Structure for Security Export Control” and “Security Export Control Guidelines for Researchers,” which should be effective if utilized together.

2. Usages of this Guidance

For better use of this Guidance, see below depending on the specific need of each academic and research institution.

For outline of the control system

-> [II. Security Export Control System](#) (from p. 6)

For the applicable cases

-> [III. Transfer of Technologies Subject to the Control](#) (from p. 27)

For the verification procedure for transfer of technologies and export of goods

-> [IV. Verification Procedure for Transfer of Technologies and Export of Goods](#) (from p. 42)

For the verification procedure for different cases, including administration of international students and researchers

-> [V. Verification Procedures for Different Cases](#) (from p. 69)

For how to establish/operate organizational structure

-> [VI. Establishing/Operating Organizational Structure](#) (from p. 79)

For referencing Internal Compliance Programs and check sheet examples

-> [IX. Example Rules and Forms](#) (from p. 96)

For individual questions and consultations

-> [VIII. Representative Q&A Examples \(with University-related Persons\)](#) (from p. 93)

[X. Contacts](#) (p. 131)

For how to respond to the clarification of deemed export control

-> [III. Transfer of Technologies Subject to the Control](#) 5. Specific-category Approach (from p. 33)

-> [IV. Procedure for Transfer of Technologies and Export of Goods](#) 1. Case-by-case Procedures (from p. 42)

II. Security Export Control System

1. System Intent and Background

1) Necessity of the Security Trade Control

Security Export Control means to control transfer of technologies and export of goods for the purpose of preserving the peace and security of Japan and the international community as a whole. It works to prevent transfer of the technologies and goods that can be potentially diverted to weapons or military use to any such person who might conduct activities of concern as a nation or terrorists who could threaten the peace and security of Japan and the international community.

Major nations in the world have set up an international framework mainly consisting of developed nations to promote the security export control. By doing so, we obviate the international threats, including potential transfer of the advanced technologies of developed countries to such countries or entities that develop (or manufacture, use or store) WMD (nuclear, chemical, biological weapons or missiles), or excessive reserve of conventional weapons.

2) Transition of the Security Environment and the Framework under International Harmonization

While activities to strengthen military power are becoming more obvious including development of nuclear weapons and missiles by North Korea, terrorism by non-state actors are globally expanding with alleged use of chemical weapons. Thus, the global security environment is drastically changing.

With the recent leadership of civilian technologies in innovation as well as movement of diversion of such civilian technologies as the dual-use into military use, significance of controlling not only goods but also technologies is growing. In addition, there are cases where countries of concern or terrorists dispatch researchers and students to abroad, that represent their increasingly diversified procurement activities that require appropriate control of technologies and goods at academic and research institutions as well.

<Transition of the targets for acquiring goods/technologies of concern>

Most goods/technologies required for development, etc., of WMD are of military/civilian use (dual-use) and can be easily camouflaged.

<Examples where civilian technologies that can be used in military sphere>

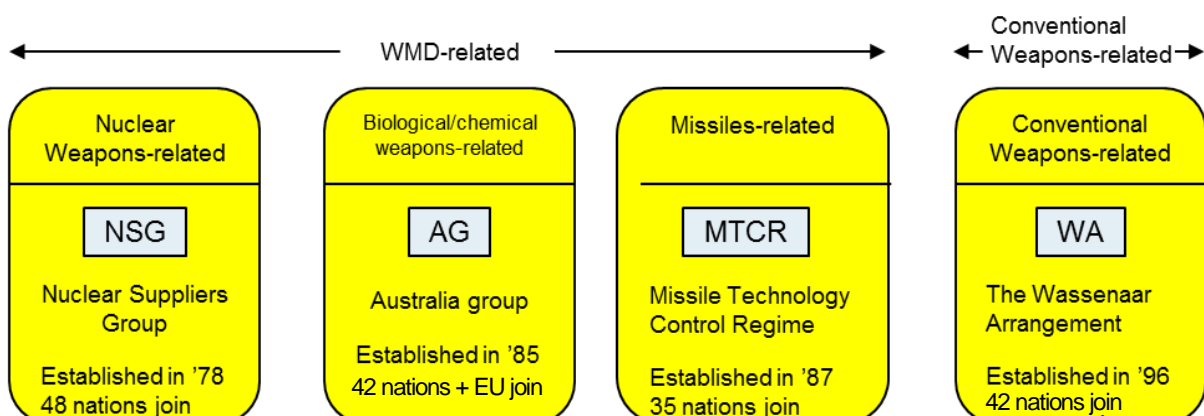

- ✓ Carbon fiber: Light in weight, strong and durable fiber material whose key element is carbon
 - Civilian applications -> golf club shafts, fishing rods, tennis rackets
 - Defense-related applications -> Main wing material for fighter jets
- ✓ Active control suspensions: A mechanism to damp vibration by electrically adapting the suspension characteristics
 - Civilian applications -> Formula 1 race car
 - Defense-related applications -> armored combat vehicle
- ✓ Gallium nitride (GaN): Semiconductor material for highly efficient power control/conversion
 - Civilian applications -> Amplifier for a satellite's radiowave transmission
 - Defense-related applications -> Radars for fleet escort vessels

In such an environment, the security export control is an initiative for which Japan and the international community are working together, following the "Multilateral export control regime" for WMD and conventional weapons, and Japan has been implementing the control based on FEFTA.

Multilateral Export Control Regime As of March 2021

Controls technologies and products that can be used in WMD or conventional weapons and development or related activities thereof

<Cases of potential outflow of advanced technologies in other countries> (Source: media reports, etc.)

In the United States, there were cases that countries of concern might have acquired advanced technologies. Some of them involved domestic/foreign universities and resulted in conviction of the parties concerned.

Cases in U.S. - 1.

- Bilal Ahmed, CEO of an Illinois engineering company, Trexim Corporation, **exported carbon fiber and other materials of concern to Pakistan Space and Upper Atmosphere Research Commission (SUPARCO)** without obtaining the license.
- **SUPARCO had been designated as one of the Specially Designated Nationals And Blocked Persons List (SDN) entity** in the U.S. (also listed in the Foreign End User List). SUPARCO shares a part of the facility with a domestic university and most of the successive chairs of the Commission are either from the university or the military.
- Ahmed was sentenced to **two years in prison** on charge of this case.

Cases in U.S. - 2.

- Amin Yu, a Florida-residing Chinese woman, **exported systems and components for marine submersible boats to China** from 2002 to 2014, **directed by a professor and some others at the Harbin Engineering University** in China.
- One of the reasons to export them turned out to be the development of marine submersible boats - unmanned, remote controlled or autonomous - by a professor at the Harbin Engineering University.
- For this reason, Amin Yu was **prosecuted for conducting illegal export and intelligence activities, attempting a deceitful conduct and crime against U.S.** She admitted the charges.

Cases in U.S. - 3.

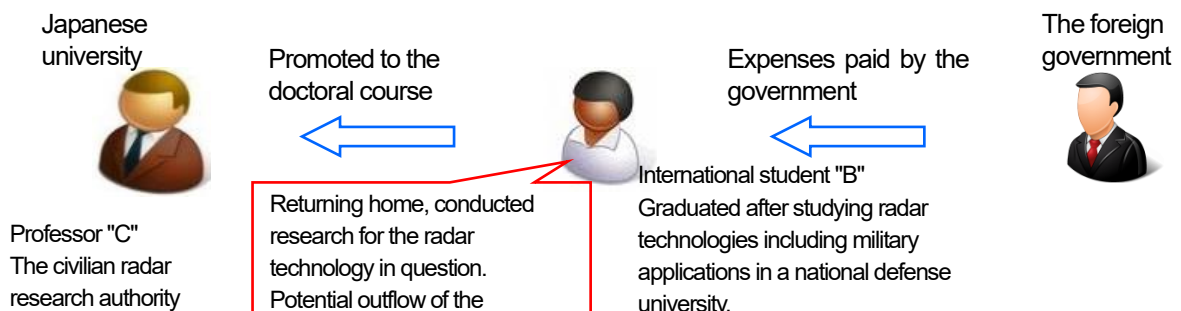

- Atmospheric Glow Technologies (AGT) concluded a **research agreement with The Air Force Research Laboratory (USAF) on the plasma actuator for unmanned aerial vehicle**.
- Partly because an ex-student (Daniel Max Sherman) of Prof. J. Reece Roth, The University of Tennessee, was with AGT then, the professor and AGT concluded a joint research agreement.
- Prof. Roth and Mr. Sherman agreed on hiring a graduate student as an assistant to help with the research. **Without obtaining U.S. government license, Prof. Roth allowed the Chinese and Iranian, etc. students who were engaged in the research activities under instruction of the professor to access to reports on this research.** Prof. Roth also carried the computer containing the technical information on the research with USAF to China for lectures without obtaining the export license.
- Because of these, Prof. Roth and Mr. Sherman were **charged with violation of the Arms Export Control Act** and respectively sentenced to four years and fourteen months (more than a year).

Cases in U.S. - 4.

- Sixing Liu, a New Jersey-residing Chinese who was an employee of L-3 Communications (a company in defense business), **possessed a large volume of U.S. military secret data (e.g., the missile guidance system) and disclosed such secret data to such parties as Chinese universities and in symposiums held by the Chinese government**.
- Specifically, he brought his computer to the congresses held in Chongqing and Shanghai in China and introduced the technologies associated with his job in the U.S. and even the national defense technologies prohibited to export by U.S. laws.
- Because of this, Mr. Sixing Liu was **charged with violation of the Arms Export Control Act as well as theft of commercial secrets**, and sentenced to 70 months in prison (a little less than six years).

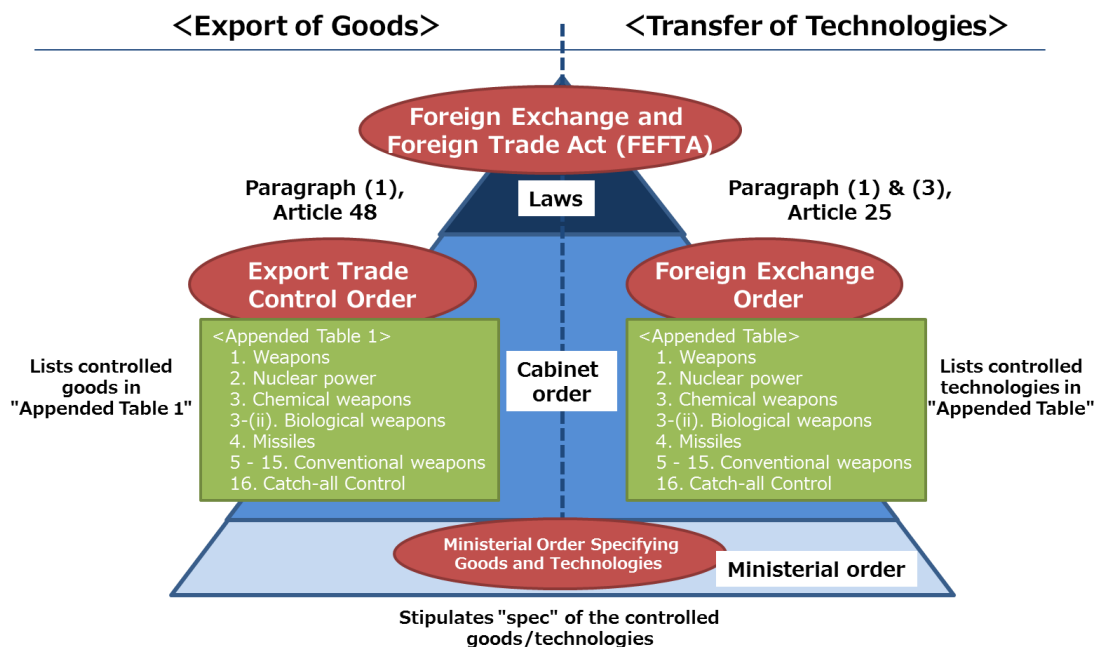

<Possible risks of technological transfer in Japan>

Japan has the possibility of transferring advanced technologies to overseas; for example, an international student receives subsidies from the foreign government, studies in a doctoral course in a Japanese university, is instructed by a professor and authority on civilian radar research, and conducts radar technology research after returning to the home country.

2. Control System

Japan enforces two types of control: (i) List Control; and (ii) Catch-all Control. These controls require the license in advance from the Minister of Economy, Trade and Industry to transfer/export controlled technologies/goods to a foreign country.

1) List Control

Following the multilateral export control regime agreement, the prior license of the Minister of Economy, Trade and Industry is required regardless of the destination of the export or shipment of technologies and goods that are weapons and can be potentially used for development, etc., of WMD and conventional weapons.

Specifically, the (List of) items¹ are specified in the "Appended Table of the Foreign Exchange Order² (hereinafter "FEO")" and the "Appended Table 1 of the Export Trade Control Order³ (hereinafter "ETCO")", while specifications are described in the "Ministerial Order Specifying Goods and Technologies Pursuant to the Provisions of the Appended Table 1 of the Export Trade Control Order and the Appended Table of the Foreign Exchange Order⁴ (hereinafter "MOSGT")." Accordingly the technologies to transfer or goods to export have to be screened if they are subject to the control or not (hereinafter "Classification").

Categories designated in the Appended Table of the FEO and the Appended Table 1 of the ETCO are described in the following pages. If these items meet the specifications described in the MOSGT, the items are subject to the List Control⁵.

¹ Weapons and sensitive general purpose goods (items/advanced materials/machine tools related to nuclear/biological/chemical weapons and missiles; see p. 10 through 14 for details) are listed.

² Foreign Exchange Order (Cabinet Order No. 260 of October 11, 1980)

³ Export Trade Control Order (Cabinet Order No. 378 of December 1, 1949)

⁴ Ministerial Order Specifying Goods and Technologies Pursuant to the Provisions of the Appended Table 1 of the Export Trade Control Order and the Appended Table of the Foreign Exchange Order (Ministerial Order of International Trade and Industry No. 49 of October 14, 1991)

⁵ For example, the "Equipment using superconducting materials" specified as 7-(iv) in Appended Table 1 of the Export Trade Control Order is further limited in the Ministerial Order Specifying Goods and Technologies Pursuant to the Provisions of the Appended Table 1 of the Export Trade Control Order and the Appended Table of the Foreign Exchange Order to the "electron devices or electronic circuits with components designed for use at temperatures lower than the critical temperature of the superconductive materials used" that has frequency separation function and the resonant circuits with a cue value exceeding 10,000." On the other hand, the technology itself falls under the category, in a broader sense, specified by the Item 4-(iv) of the Appended Table of the Foreign Exchange Order as "employed in the use of autoclaves" while it is limited to the technology "pertaining to the use of autoclaves, and the data or procedures to provide for the environment inside the autoclaves" in the Ministerial Order Specifying Goods and Technologies Pursuant to the Provisions of the Appended Table 1 of the Export Trade Control Order and the Appended Table of the Foreign Exchange Order. Thus, confirming the specification defined by the Order is required for the Classification process.

List Control Items

As of December 6, 2022

Number	Item	Number	Item
1. Arms		9)	Nickel powder, nickel porous metal
		10)	Equipment for the production of deuterium or deuterium compounds
1)	Firearms, ammunitions	10-2)	Equipment for the production of uranium/plutonium
2)	Explosives, explosive dispensers	11)	Flow-forming machines
3)	Propellants, military fuels	12)	1. Numerically-controlled machine tools
4)	Propellants, military fuels		2. Measurement equipment
5)	Directed-energy weapons	13)	Induction furnaces, arc furnaces or melting furnaces
6)	Kinetic energy weapons and projectiles	14)	Isostatic presses
7)	Military vehicles, bridges, etc.	15)	Robots
8)	Military vessels, etc.	16)	Vibration test systems
9)	Military aircraft, etc.	17)	Structural materials for gas centrifuge rotors
10)	Anti-submarine nets, anti-torpedo nets	18)	Beryllium
11)	Armor plates, military helmets, body armors	19)	Substances used as alpha sources for the detonation of nuclear weapons
12)	Military searchlights or control equipment	20)	Boron 10
13)	Bacterial/chemical warfare agents	21)	Substances used as reducing or oxidizing agents for the production of nuclear fuel materials
13-2)	Chemical compounds for clarifying bacterial/chemical warfare agents	22)	Crucibles
14)	Biopolymers for chemical agents, etc.	23)	Hafnium
15)	Equipment for the production/test of warfare low explosives	24)	Lithium
16)	Equipment or device for the production of arms	25)	Tungsten
17)	Military satellites or components thereof	26)	Zirconium
2. Nuclear Power		27)	Electrolytic cells for fluorine production
		28)	Equipment for the production of gas centrifuge rotors
1)	Nuclear fuel or nuclear source materials	29)	Centrifugal balancing machines
2)	Nuclear reactors or power-generating equipment for nuclear reactors	30)	Filament winding machines
3)	Deuterium or deuterium compounds	31)	Laser oscillators
4)	Artificial graphite	32)	Mass spectrometers or ion sources
5)	Equipment for the separation/reprocessing of nuclear fuel materials	33)	Pressure gauges or bellows valves
6)	Equipment for the separation of lithium isotopes	34)	Superconducting solenoid electromagnets
7)	Equipment for the separation of uranium/plutonium isotopes	35)	Vacuum pumps
8)	Frequency changers	35-2)	Scroll-type compressors and vacuum pumps

Number	Item	Number	Item
36)	Direct current power units	5-2)	Bearings for pumps
37)	Electron accelerators or X-ray generators	6)	Propellants or their raw materials
38)	Impact testing machines	7)	Equipment for the production/test of propellants
39)	High speed cameras	8)	Powder and granular materials mixers
40)	Interferometers, pressure gauges, pressure transducers	9)	Jet mills or equipment for the production of metal powders
41)	Goods used for the detonation (testing) of nuclear weapons	10)	Equipment for the production of composite materials
42)	Photomultiplier tubes	11)	Nozzles
43)	Neutron generators	12)	Equipment, et alia, for the production of nozzle or re-entry vehicle nose tips
44)	Remote control manipulators	13)	Isostatic presses or controllers
45)	Radiation shielding windows or frames	14)	Furnaces or controllers for composite materials
46)	TV cameras or lenses specially designed for protection from the influence of radiation	15)	Structural materials for rockets or UAVs
47)	Tritium	16)	Accelerometers or gyroscopes for rockets or UAVs
48)	Equipment for the production, collection or preservation of tritium	17)	Flight controllers or attitude controllers, et alia, for rockets or UAVs
49)	Platinized catalysts	18)	Avionics equipment
50)	Helium-3	18-2)	Thermoelectric batteries for rockets or UAVs
51)	Primary products of rhenium	19)	Gravity meters or gravity gradiometers for aircraft or ship mounting
52)	Containers with explosion-proof construction	20)	Launch pads or associated ground launch support equipment for rockets or UAVs
3. Chemical Weapons		21)	Radio telemetry equipment, radio telecontrol equipment for rockets or UAVs
		22)	Computers designed for use in a rocket
1)	Raw materials for chemical warfare agents or substances/raw materials having equivalent toxic ability with chemical warfare agents	23)	Analog-to-digital converters for rockets or UAVs
2)	Equipment or device for the production of chemical agents	24)	Vibration test equipment, aerodynamics testing equipment, combustion test equipment, et alia
3)	Equipment for the production of bacterial agents	24-2)	Electronic computers used for designing rockets
3 - 2. Biological Weapons		25)	Materials or equipment for reducing the level of the radio waves, acoustic waves or light
		26)	Integrated circuits, detectors, or radomes for rockets or UAVs
1)	Source materials for bacterial warfare agents	5. Advanced Materials	
2)	Equipment for the production of bacterial agents		
4. Missiles		1)	Fluorine compound products
		2)	(delete)
1)	Rockets or their production equipment	3)	Aromatic polyimide products
1-2)	Unmanned aerial vehicles (UAVs) or their production equipment	4)	Tools for forming of titanium, aluminum or its alloys
2)	Guidance or testing equipment for rockets	5)	Alloys or powders of titanium or aluminum and their production equipment
3)	Propulsion units	6)	Metallic magnetic materials
4)	Flow-forming machines	7)	Uranium-titanium alloys or tungsten alloys
5)	Servo valves, pumps, gas turbines	8)	Superconductive materials

Number	Item	Number	Item
9)	(delete)	8-4)	Optical modulator
10)	Lubricants	9)	Sampling oscilloscopes
11)	Liquids for preventing vibration	10)	Analog-to-digital converters
12)	Liquids for coolant	11)	Digital instrumentation recorders
13)	Ceramic powders	12)	Signal generators
14)	Ceramic composites	13)	Frequency analyzers
15)	Polydiorgano silane or polysilazane, et alia	14)	Network analyzers
16)	Bismaleimide or aromatic polyamideimide, et alia	15)	Atomic frequency standards
17)	Fluorinated polyimides	15-2)	Spray cooling method temperature control devices
18)	Molded products that use prepregs or preforms	16)	Semiconductor manufacturing equipment
19)	Boron, boron alloy, or guanidine nitrate, et alia	17)	Masks or reticles
6. Material Processing		17-2)	Base materials for production of masks
		18)	Semiconductor substrate
1)	Bearings	19)	Resists
2)	Numerically-controlled (N/C) machine tools	20)	Aluminum, gallium and other organic metallic compounds Phosphorus, arsenic and other organic compounds
3)	Machine tools for the production of gears	21)	Phosphorus, arsenic or antimony hydrides
4)	Isostatic presses	22)	Silicon carbides
5)	Coating devices	23)	Polycrystalline substrate
6)	Measurement equipment	8. Computers	
7)	Robots		
8)	Feedback devices, et alia	1)	Computers
9)	Spin-forming machines	9. Telecommunication	
7. Electronics			
1)	Integrated circuits	1)	Telecommunication transmission equipment
2)	Devices using microwaves or millimeter waves	2)	Electronic changers
3)	Signal processing equipment	3)	Communication optical fibers
4)	Devices using superconductive materials	4)	(delete)
5)	Superconducting electromagnets	5)	Phased array antennas
6)	Primary/secondary or solar cells	5-2)	Radio direction finding equipment for monitoring use
7)	High voltage capacitors	5-3)	Wireless communication wiretapping devices
8)	Encoders	5-4)	Equipment capable of detecting the position of objects by observing interferences of radio waves, possessing a receiving function only
8-2)	Thyristor devices or modules	5-5)	Internet communication monitoring equipment
8-3)	Semiconductor devices for power control	6)	Design/production equipment for items 1) through 3), and 5) through 5-5)
		7)	Encryption equipment

Number	Item	Number	Item
8)	Equipment designed to prevent the leakage of information transmission signals	5)	Testing/production equipment for items 1) through 4-2)
9)	(delete)	12. Marine	
10)	Communication cable systems capable of detecting surreptitious intrusion		
11)	Design/production/measurement equipment for items 7), 8) or 10)		
10. Sensors		1)	Submersible vessels/vehicles
1)	Underwater acoustic equipment	2)	Vessel components or auxiliaries thereof
2)	Optical detectors or coolers thereof	3)	Underwater salvage systems
3)	Optical fibers for use in sensors	4)	Underwater lighting systems
4)	High speed cameras	5)	Underwater robots
5)	Reflectors	6)	Sealed power units
6)	Optical components for space use	7)	Circulation water tanks
7)	Controllers of optical equipment or components	8)	Buoyant materials
7-2)	Aspherical optical elements	9)	Closed-circuit or semi-closed circuit self-contained diving equipment
8)	Laser oscillators	10)	Underwater acoustic transmitters used for obstruction
8-2)	Laser microphone	13. Propulsion Units	
9)	Magnetometers, underwater electric field sensors or magnetic field gradiometers, or calibrating equipment thereof	1)	Gas turbine engines
9-2)	Underwater monitoring systems	2)	Spacecrafts for satellite or space development use
10)	Gravity meters or gravity gradiometers	2-2)	Controllers designed for use in satellites
11)	Radars	3)	Rocket propulsion systems
11-2)	Masks and reticles, specially designed for optical sensors	4)	Unmanned aerial vehicles
12)	Equipment for measuring optical reflectance, et alia	5)	Testing/production equipment for items 1) through 4), and 10) of 15.
13)	Equipment for the manufacture or calibration equipment of gravity meters	14. Miscellaneous	
14)	Materials, et alia, for optical detectors or components thereof		
11. Navigation Devices			
1)	Accelerators	1)	Metallic fuel in a powder state
2)	Gyroscopes	2)	Substances which are additives or precursors to low explosives or high explosives
3)	Inertial navigation systems	3)	Diesel engines
4)	Gyro-astro compasses, global navigation satellite systems, equipment for receiving radio waves, or aircraft altimeters	4)	(delete)
4-2)	Underwater navigation devices using sonar	5)	Self-contained diving equipment
		6)	Civil engineering machinery for air transportation
		7)	Robots or control equipment thereof
		8)	(Delete)

Number	Item
9)	Tear or sneeze gas and application equipment thereof
10)	Simplified explosion devices
11)	Detectors for explosives
15. Sensitive Items	
1)	Molded goods using inorganic fibers, et alia
2)	Radio wave absorbers, infrared absorbers or conductive polymers
3)	Nuclear heat source materials
4)	Digital telecommunication transmission equipment
4-2)	Units for obstruction of simplified explosion devices
5)	Underwater acoustic equipment
6)	Optical detectors for space use
7)	Radars which utilize a transmitting pulse width less than 100 nanoseconds
8)	Submersible boats
9)	Soundproofing devices for vessels
10)	Ramjet engines, scramjet engines, combined cycle engines

2) Catch-all Control

In the Catch-all Control, almost all technologies/goods are subject to the control⁶. If the technologies to transfer or goods to export are not subject to the List Control, exporters may still need to apply for the export license depending on the end-uses and the end-users⁷.

i. WMD Catch-all Control

With regard to the transfers/exports destined for⁸ other countries/regions than those implementing strict export control systems (i.e., Preferred trade partner list countries⁹), WMD Catch-all Control requires exporters to apply for a license from the Minister of Economy, Trade and Industry in advance in case: exporters¹⁰ have come to know that the technologies to transfer or goods to export could be used for the development of or other related activities¹¹ for WMD and/or Missiles ("objective" condition)¹²; or exporters are so informed by the Minister of Economy, Trade and Industry that license application is required ("informed" condition).

ii. Conventional Weapon Catch-all Control

With regard to the transfers/exports destined for one of the countries/ regions under UNSC Arms Embargo¹³, the Conventional Weapon Catch-all Control requires exporters to obtain a license from the Minister of Economy, Trade and Industry in advance in case: exporters have come to know that the technologies to transfer or goods to export will be used for the development of or other related activities¹⁴ for conventional weapons¹⁵; or exporters are so informed by the Minister of Economy, Trade and Industry as an "informed" condition case. With regard to the exports destined for one of the non-Preferred trade partner list countries and not under UNSC Arms Embargo, the Conventional Weapon Catch-all Control requires exporters to obtain a license from the Minister of Economy, Trade and Industry in advance when exporters are informed, as an "informed" condition case, by the Minister of Economy, Trade and Industry that the such items are or may be intended for development, etc., of conventional weapons.

⁶ All technologies or goods (excl. foods or lumbers) other than those subject to the List Control are under control. See Item 16 in both "Appended Table of the Foreign Exchange Order" and "Appended Table 1 of the Export Trade Control Order" for details of the subject technologies and goods. For Catch-all Control, please check METI's Security Export Control website (<http://www.meti.go.jp/policy/anpo/anpo03.html> - Japanese, and <http://www.meti.go.jp/policy/anpo/englishpage.html> - English) as well.

⁷ The Commodity Watch List for "WMD Catch-All" (see pages 17 through 19) and for "Military Catch-All" (see page 20/21) are provided as a notification (Item 24 of the Export Precautions No. 24) for examples of items that are not subject to the List Control but of strong concern for development, etc., of WMD or conventional weapons. In exporting goods listed therein or transferring technologies for design/manufacture/use of such goods, particularly careful screening is recommended for exporters to avoid consequently helping promote development, etc., of WMD or conventional weapons in the end-users of concern.

⁸ Destination of the transfer or shipment

⁹ Set forth in the Appended Table 3 of the Export Trade Control Order. Specifically, Argentina, Australia, Austria, Belgium, Bulgaria, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Republic of Korea, Luxembourg, Netherlands, New Zealand, Norway, Poland, Portugal, Spain, Sweden, Switzerland, United Kingdom of Great Britain and Northern Ireland, and United States of America.

¹⁰ Mean those who export/transfer goods/technologies, including academic and research institutions.

¹¹ Means development, manufacture, use or storage thereof.

¹² Mean nuclear weapons, chemical/bacterial warfare agents or the equipment for application thereof or the rocket or unmanned aerial vehicle capable of transporting these with a range or flight range of 300km or longer

¹³ Set forth in the Appended Table 3-2 of the Export Trade Control Order. Specifically, Afghanistan, Central African Republic, Democratic Republic of the Congo, Iraq, Lebanon, Libya, North Korea, Somalia, South Sudan and Sudan

¹⁴ Means manufacture or use of military (conventional) weapons.

¹⁵ Mean non-nuclear weapons set forth by Item 1 of the Appended Table 1 of the Export Trade Control Order.

◆ WMD Catch-all Control

Final destination	Conditions requiring the license		
	"Informed" condition	"Objective" condition	
		End-use condition	End-user condition
Non-Preferred trade partner list countries/regions	Yes	Yes	Yes

◆ Conventional Weapon Catch-all Control

Final destination	Conditions requiring the license		
	"Informed" condition	"Objective" condition	
		End-use condition	End-user condition
Countries/regions under UNSC Arms Embargo	Yes	Yes	-
Non-Preferred trade partner list countries/regions (excl. countries/regions under UNSC Arms Embargo)	Yes	-	-

Note: If your case falls in any of the "Yes" conditions, the control applies.

Note:

End-use condition:

- Whether or not the subject services/goods are used for development, etc., of WMD or conventional weapons in the imported countries/regions

End-user condition:

- Whether or not the importer/end-user is (or has been) involved in development, etc., of WMD
- Whether or not the importer/end-user is a company/organization listed in the Foreign End User List¹⁶

¹⁶ See p. 35 and its footnote.

The Commodity Watch List for WMD Catch-All

Items	Uses of concern
1. Tributyl phosphate (TBP)	Nuclear weapons
2. Carbon/Glass/Aramid fiber	Nuclear weapons, missile
3. Titanium alloys	
4. Maraging steel	
5. Aluminum alloys tubes with a diameter of more than 75 mm	Nuclear weapons
6. Flow-forming machines	Nuclear weapons, missile
7. Numerically-controlled (N/C) machine tools	
8. Isostatic presses	
9. Filament winding machines	Nuclear weapons
10. Frequency changers	
11. Mass spectrometers or ion sources	
12. Vibration test systems	Nuclear weapons, missile
13. Centrifugal multiplane balancing machines	
14. Corrosion-resistant pressure gauges/sensors	
15. Large-size non-destructive inspection equipment	Nuclear weapons
16. High frequency oscilloscope and waveform digitizers	
17. Stable power/voltage DC power supplies	
18. Large generators	
19. Large vacuum pumps	
20. Radiation-hardened robots	Nuclear weapons, missile
21. TIG welding units, electron beam welding units	
22. Radiation monitoring and detection equipment	Nuclear weapons
23. Mill for fine powder	Missile
24. Karl Fischer moisture equipment	
25. Equipment designed for producing preregs	
26. Artificial graphite	Nuclear weapons, missile
27. Gyroscopes	Missile
28. Rotary encoders	
29. Heavy trucks (incl. tractors, trailers, dump trucks)	
30. Crane trucks	Biological weapons
31. Chambers (sealed) for fermentation	
32. Centrifugal separators	
33. Freeze dryers	Missiles, chemical weapons
34. Corrosion-resistant reactors	
35. Corrosion-resistant agitators	
36. Corrosion-resistant heat exchangers or condensers	

Items	Uses of concern
37. Corrosion-resistant distillation or absorption columns	Missiles, chemical weapons
38. Corrosion-resistant filling equipment	
39. Unmanned aerial vehicles (UAVs) that are specially designed for incorporating spray machines (excl. model aircraft for amusement or sport use)	Missiles, biological/chemical weapons
40. Spray machines that are specially designed for installing in UAVs	
41. N-(1-phenethyl-4-piperidyl)propionanilide (also known as fentanyl) (437-38-7), N-[1-[2-(4-ethyl-5-oxo-2-tetrazoline-1-yl)ethyl]-4-(methoxymethyl)-4-piperidyl]propionanilide (also known as alfentanil) (71195-58-9), Methyl=1-phenethyl-4-(N-phenylpropanamide)piperidine-4-carboxylate (also known as carfentanil) (59708-52-0), 1-(2-methoxycarbonylethyl)-4-(phenylpropionylamino)piperidine-4-carboxylic acid methyl ester (also known as remifentanyl) (132875-61-7), N-[4-(methoxymethyl)-1-[2-(2-thienyl) ethyl]-4-piperidyl]propionanilide (also known as sufentanyl) (56030-54-7)	Chemical weapons

Note: Items 34 through 38 were added as of Apr. 1, 2012.

1. Particularly careful screening is required for exporters to prevent diversion to such uses of concern as development, etc., of WMD in the imported countries/regions.
2. To be used for checking¹⁷ whether or not the concerned categories (Nuclear, Chemical weapons, Biological weapons or Missiles) matches the use of concern for the goods/technologies, in exporting/transferring such goods/technologies to an organization listed in the Foreign End User List.

¹⁷ See p. 57 for accepting international students from an organization in the End User List.

The Commodity Watch List for WMD Catch-All

In case export to Syria

(effective as of October 7, 2022)

Even more careful screening of the end-use and end-user is required in exporting the following goods.

Items	Uses of concern
1. Draft chamber	Chemical weapons
2. Protective equipment for respiration attached to full-face mask	Biological/chemical weapons
3. Aluminum chloride (CAS 7446-70-0), dichloromethane (75-09-2), N,N-dimethylaniline (121-69-7), isopropyl bromide (75-26-3), isopropyl ether (108-20-3), mono-isopropylamine (75-31-0), kalium bromide (7758-02-3), pyridine (110-86-1), sodium bromide (7647-15-6), sodium metal (7440-23-5), tributylamine (102-82-9), triethylamine 8121-44-8), trimethylamine (75-50-3), et alia	Chemical weapons
4. Diethylene triamine (111-40-0)	
5. Butyrylcholinesterase, pyridostigmine bromide (101-26-8), obidoxime chloride (114-90-9)	
6. Bio safety cabinet, globe box	Biological weapons
7. Batch-type centrifugal machine	
8. Fermentation tank	Chemical weapons
9. Reactor, agitator, heat exchanger, condenser, pump (excluding item 11 below), valve, container, distiller, absorption tower	
10. Clean room, fan equipped with HEPA filter	Biological weapons
11. Vacuum pump or its attachments	Chemical weapons
12. Equipment for analyzing and detecting chemical substances, their parts and attachments	
13. Chlorine-alkali electrolytic cell (including mercury, diaphragm, or ion-exchange membrane electrolytic bath. The same applies hereinafter)	Chemical weapons
14. Titanium electrode (including one coated with another metallic oxide) designed and used for the chlorine-alkali electrolytic bath	
15. Nickel electrode (including one coated with another metallic oxide) designed and used for the chlorine-alkali electrolytic bath	
16. Titanium-nickel bipolar electrode (including one coated with another metallic oxide) designed and used for the chlorine-alkali electrolytic bath	
17. Asbestos diaphragm designed and used for the chlorine-alkali electrolytic bath	
18. Fluoropolymer-based diaphragm designed and used for the chlorine-alkali electrolytic bath	

Items	Uses of concern
19. Fluoropolymer-based ion exchange membrane designed and used for the chlorine-alkali electrolytic bath	
20. Compressor designed to press chlorine in a wet or dry condition regardless of its structure	
21. Mercury (7439-97-6), barium chloride (10361-37-2), sulfuric acid (whose mass concentration is 90% or over) (7664-93-9), 3,3-dimethyl-1-butene (558-37-2), 2,2-dimethylpropanal (630-19-3), 2,2-dimethylpropylchloride (753-89-9), 2-methylbutene (26760-64-5), 2-chloro-3-methylbutane (631-65-2), pinacol (76-09-5), 2-methyl-2-butene (513-35-9), butyllithium (109-72-8), bromo (methyl) magnesium (75-16-1), formaldehyde (50-00-0), 2,2'-iminodiethanol (111-42-2), dimethyl carbonate (616-38-6), N-methyl diethanolamine (105-59-9), methyldiethanolamine hydrochloride (54060-15-0), methanol (67-56-1), ethanol (64-17-5), 1-butanol (71-36-3), 2-butanol (78-92-2), isobutanol (78-83-1), 2-methylpropane-2-ol (75-65-0), cyclohexanol (108-93-0), diethylammonium chloride (660-68-4), diisopropylamine-hydrochloride (819-79-4), quinuclidine-3-one hydrochloride (1193-65-3), 3-quinuclidinol hydrochloride (6238-13-7), (R)-3-quinuclidinol hydrochloride (42437-96-7), N,N-diethylaminoethanol hydrochloride (14426-20-1), 2-(diisopropylamino)ethanol hydrochloride (63051-68-3)	

Note: The parenthesis numbers for items 3 through 5 and 21 are CAS numbers (that are given to chemical substance or substance groups by a U.S. chemical society institution, Chemical Abstracts Service, or, CAS).

The Commodity Watch List for Conventional Weapon Catch-All

Items	Uses of concern
1. Ni or Ti alloy	Conventional weapons
2. Sintered magnet	
3. Equipment to manufacture item 2 above, or parts thereof	
4. Hydraulic fluids containing phosphate/cresol ester, tris (dimethylphenyl) phosphate, or trinormalbutyl phosphate	
5. Organic fiber, carbon fiber, or inorganic fiber	
6. Bearings or components thereof	
7. Machine tools listed below, or components thereof (a) Numerically controlled machine tools (b) Machine tools for generating optical quality surfaces (excluding numerically controlled machine tools) (c) Dimensional inspection or measuring system (including machine tools having such capabilities)	
8. Secondary cells	
9. Waveform digitizers	
10. Electronic parts mounting robots	
11. Electronic computers or components thereof	
12. Telecommunication transmission equipment or components thereof	
13. Phased array antennas	
14. Telecommunication jamming equipment or components thereof	
15. Position detecting equipment using electromagnetic interference observation technology without sending out electromagnetic waves such as radio waves	
16. Optical detectors, coolers therefore, or equipment using optical detectors	
17. Optical fibers for use in sensors	
18. Laser oscillators or components thereof	
19. Magnetometers, underwater electromagnetic field sensors, magnetic gradiometers, or components thereof	
20. Gravity meters	
21. Radars or components thereof	
22. Accelerometer or components thereof	
23. Gyroscopes or components thereof	

Items	Uses of concern
24. Inertial navigation systems, other equipment using inertial forces, or components thereof	Conventional weapons
25. Gyro-astro compasses, devices that derive position or orientation by means of automatically tracking celestial bodies or satellites, electromagnetic wave receivers for global navigation satellite systems, components thereof, or airborne altimeters	
26. Underwater cameras or components thereof	
27. Air-independent power systems	
28. Self-contained diving equipment (open-circuit types) or components thereof	
29. Gas turbine engines or components thereof	
30. Rocket propulsion systems or components thereof	
31. Equipment for the manufacture of the items listed in 29) or 30) above or components thereof	
32. Air vehicles or components thereof	
33. Vibration testing equipment, wind tunnels, environmental testing equipment for the development or testing of rockets or air vehicles, or components thereof	
34. Flash X-ray machines	

Foreign End-User List

The Foreign End User List, which is presented by METI, contains companies and organizations that have the risk of being involved in WMD development. It is one of the “documents created by METI to show trends in the development of nuclear weapons specified in Item 3a, Paragraph 1, Article 4 of the Cabinet Order on Export Trade Control (No. 378 in 1949)” defined in “No. 2” of the Documental Notification.”¹⁸ When goods are exported to a company listed, it is necessary to obtain a license from the Minister of ETI, except for a case where the goods are clearly not used for WMD development.

See the latest version,¹⁹ because the list is subject to change every year.

County/Region-by-country/region number of companies and organizations listed

Country or Region	No. of End-users
Afghanistan	2
UAE	2 1
Yemen	2
Israel	1
Iran	2 2 3
India	3
Egypt	3
North Korea	1 4 7
Syria	1 9
Taiwan	4
China	9 4
Pakistan	9 0
Hong Kong	1 0
Lebanon	9
Russia	4 2
Total	6 7 0

No.	Country or Region	Company or Organization	Also Known As	Type of WMD
1	Islamic Republic of Afghanistan	Al Qa'ida/Islamic Army	<ul style="list-style-type: none"> • Al Qaeda • Islamic Salvation Foundation • The Base • The Group for the Preservation of the Holy Sites • The Islamic Army for the Liberation of Holy Places • The World Islamic Front for Jihad against Jews and Crusaders • Usama Bin Laden Network • Usama Bin Laden Organisation 	Chemistry C
2	Islamic Republic of Afghanistan	Ummah Tameer E-Nau (UTN)	<ul style="list-style-type: none"> • FOUNDATION FOR CONSTRUCTION • NATION BUILDING • RECONSTRUCTION FOUNDATION • RECONSTRUCTION OF THE ISLAMIC COMMUNITY • RECONSTRUCTION OF THE MUSLIM UMMAH • UMMAH TAMEER I-NAU • UMMAH TAMIR E-NAU • UMMAH TAMIR I-NAU • UMMAT TAMIR E-NAU • UMMAT TAMIR-I-PAU 	Nuclear N

*Revised on November 9, 2022

¹⁸ Document to be acquired by exporters defined in a notice issued by the Minister of METI according to Ministerial Ordinances No. 2 and No. 3 that specify export goods having the risk of being used for nuclear weapon development (Notification No. 760 issued by METI in 2001)

¹⁹ <https://www.meti.go.jp/policy/anpo/law05.html#user-list>

3. License Application for Transfer of Technologies, etc.

To transfer/export controlled technologies/goods requires a prior license from the Minister of Economy, Trade and Industry.

To determine whether or not the license is required, it should be verified first if the item is subject to the List Control ("classification"). If it is subject to the List Control, the license is required. Following this, if the item is not subject to the List Control, exporters need to verify whether or not (i) there are concerns over the end-use or the end-user in light of the WMD Catch-all Control, or (ii) there are concerns over the end-use in light of the Conventional Weapon Catch-all Control, and if the end-use or the end-user is subject to the Control, the license is required.

When the license is required, the application shall be submitted to the responsible service office (METI headquarters or Regional Bureaus of Economy, Trade and Industry/International Trade Offices) (i) at the submission counter; (ii) via post-mail; or (iii) by digital submission (NACCS trade control subsystem) for the license.

4. Establishing/Operating Organizational Structure

Paragraph (4), Article 55-10 of FEFTA stipulates that persons who transfer/export the goods/technologies as their business operations (hereinafter called exporters) shall properly transfer/export the goods/technologies pursuant to the "Compliance Requirements for Exporters."²⁰ Academic and research institutions are also subject to the "requirements" and such aspects as establishment of the compliance structures and procedures, as well as maintenance thereof have been set forth.²¹

The Minister of Economy, Trade and Industry may give an instruction or advice in accordance with the "Compliance Requirements for Exporters" and may even give a recommendation or order in case of violation of the requirements. Violation against the given order is subject to a penalty²².

5. Penalties for Legal Violation

Violation of FEFTA, including transfer/export of the controlled technologies/goods without obtaining a required license, is subject to a criminal charge and/or an administrative sanction.

It is the party which transfers/exports the controlled technologies/goods who will be held liable for the violation of FEFTA. Even if the export procedure is subcontracted to a customs clearing agent, the academic and research institution that actually transfers/exports the controlled technologies/goods will be held liable.

Both individuals and the juridical persons to which the individuals belong that have actually transferred/exported the controlled technologies/goods are subject to these penalties. Depending on the matter of the violation, the penalties can be imposed both against the individuals and juridical persons.

²⁰ Defined in the Ministerial Ordinance for Defining the Compliance Requirements for Exporters (Ministerial Order of METI No. 60, 2009).

²¹ See page 79

²² Articles 55-11, 55-12 and 71 of FEFTA

Criminal charges

- Imprisonment: not more than ten years
- Fines: not more than thirty million yen (individuals); or one billion yen (juridical persons).

If five times the value of the items involved exceeds thirty million or one billion yen, whichever is greater will be charged.

Administrative sanction

- Violators are prohibited to export/transfer goods/technologies for not more than three years.
- Persons prohibited to export/import are prohibited to export/import as an employee of another juridical person.

Non-legal impact can be also ruinous!

- Damaged image of the organization
- Social sanction
- Shareholder litigation, etc.

A warning from METI to the violating organization

Note: If the violation is voluntarily reported, there may be some consideration on the legal proceeding.

In addition to the publicly announced administrative sanctions and warnings, there are other proceedings including the explanatory report (basically kept undisclosed).

The outflow of technologies/goods to countries of concern for nuclear development not only increases risks for use in the applications of concern, but also leads to, if they are actually used in these applications, damaged social credibility of the provider/exporter of the technologies/goods as well as that of Japan, and even to threatened peace and security of Japan and the whole world.

In these regards, strict control of the technologies and goods is required upon thorough understanding of the Control System, in order for academic and research institutions to avoid possible violations.

<A case a Japan-made product was used for an application of concern>

In the case wherein the three-dimensional measuring equipment made in Japan was found in a facility associated with nuclear development in Libya in 2007, the company itself was fined 45 million yen, the four executives including ex-Vice Chairman of the company were sentenced to 2 to 3 years' imprisonments, and METI prohibited exports from the company (an administrative sanction) for a total of three years.

1. Case summary

- The company A that manufactures high-precision measuring equipment exported the three-dimensional measuring equipment (subject to List Control) that can be diverted for use in development, etc., of nuclear weapons to countries including Malaysia and Singapore by falsifying the inspection data to make the performance ostensibly less accurate. (The total exported quantity was approx. 1,000 units.) One of them was discovered in a nuclear development facility in Libya.
- Three export cases (approximate value: 9.7 million yen) were prosecuted.

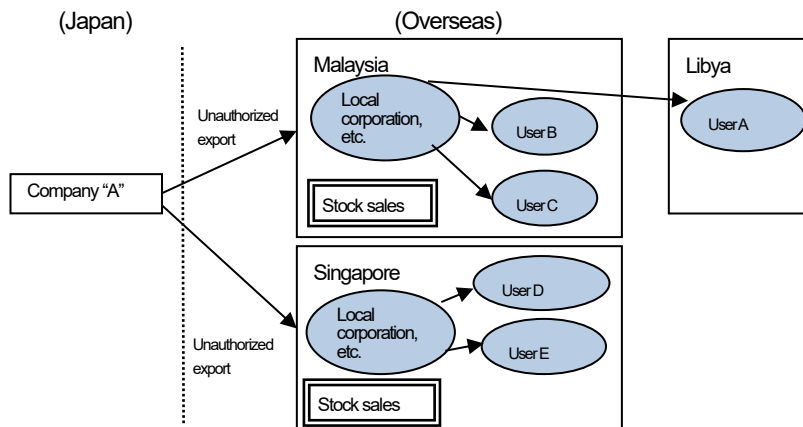

2. The sentence and the time and type of the administrative sanction

[Sentence]

The four executives including ex-Vice Chairman were sentenced to 2 to 3 years' imprisonments (with suspensions of 4 to 5 years), and the company itself was fined 45 million yen.

[Sanction]

(i) Exports of all products to any destination were prohibited for 6 months; and (ii) exports of the three-dimensional measurement equipment to any destination were prohibited for 2 years and 6 months.

<Violation cases by academic and research institutions>

Cases of violation committed by the transfer/export of the technologies/goods without obtaining the license by mistake in confirmation of the service transaction license, the export procedure, screening for compliance, or classification procedures, have been identified with academic and research institutions in Japan as well.

Cause		Description
Mistakes in verifying the service transaction licenses	Research institution "A": <u>Expired</u> license	The institution was jointly studying technologies for aircrafts with an overseas institution. As the technologies in question were subject to FEFTA, they duly obtained the service transaction license at the beginning. However, the reorganization in "A" resulted in transient lowering of the export/technology control capability, which led to inadequate control of the subject transaction and just continued transfer the technologies <u>without finding that the service transaction license had expired</u> .
	University "B": <u>Breached</u> export license condition	B applied for an export license for the infrared camera for overseas research, and the <u>license was issued under the condition of "reporting on shipping it back."</u> However, B <u>neglected to submit the report even after the due date</u> , which resulted in violation of the license condition.
Mistakes in export procedures	Research institution "C" and university "D": <u>Inadequate shipping confirmation</u>	Though "C" had instructed the joint research partner "D" to obtain the export license in shipping the item in question because it is subject to the license control, " <u>D neglected to reconfirm that when it got shipped</u> ". Packaging the subject item together with other non-subject items by mistake resulted in exporting without the license.
Misjudgment in compliance	University "E": <u>Abuse of the low value exemptions</u>	"E" <u>abused the low value exemptions</u> in exporting a framing camera for an overseas research by declaring the export value at 100,000 yen because the camera was to be shipped back after its use. The actual purchase price was eight million yen, which exceeds the exemption value, thus, exporting without the license.
Mistakes in classification procedures	University "F": <u>Only oral check on classification by other companies</u>	When exporting a high-speed camera to a foreign college, "F" had a telephone call to the manufacturer during clearance to check whether the product is applicable or not, and received <u>an oral answer "no requirement for a license."</u> Therefore, the university exported the camera <u>without waiting for the formal classification result in writing or its own checks</u> . In fact, the person in charge in the manufacturer misunderstood the model number and the export required a license, resulting in export without permission.
	Research institute "G": <u>No check on the latest version of laws related to list-controlled products</u>	When receiving a request for providing a microorganism strain for research purposes from a foreign university, "G" used the in-house classification system to make sure the export required no license and exported it without an application for permission. However, the FEFTA-related ministerial ordinance had recently been modified and the strain was additionally listed as List Control goods. <u>The revision was found not reflected in the system</u> , resulting in export without permission.

III. Transfer of Technologies Subject to the Control

For compliance with the control under FEFTA, it is important to know specific cases that constitute "transfer of technologies" or "export of goods" by academic and research institutions, set forth by the Act. The table below describes commonly observed occasions of "transfer of technologies" or "export of goods."

<Examples of Opportunities for Transfer/Export of Technologies/Goods in Academic and Research Institutions²³>

Occasions	Specific examples
Accepting international students/researchers	<ul style="list-style-type: none">- Transfer of technologies in lending the experiment devices- Enhancement/development of the experiment devices associated with research instructions- Providing technical information using fax or a USB drive- Providing such information through phone calls or email- Classes, meetings or discussions- Research instructions or training
Execution of a joint research or the collaborative agreement with a foreign university/company	<ul style="list-style-type: none">- Transfer of technologies in lending the experiment devices- Enhancement/development of the experiment devices associated with the joint research- Providing technical information through fax or as data in a USB drive- Providing such information through phone calls or email- Meetings or discussions
Bringing/shipping research samples overseas	<ul style="list-style-type: none">- Bringing/shipping samples overseas- Bringing/shipping self-made research materials/equipment overseas
Visits of Foreign Researchers	<ul style="list-style-type: none">- Research facility tours- Describing the processes or distributing the handout materials
Private lectures/exhibitions	<ul style="list-style-type: none">- Verbally providing technical information- Showing technical information on panels

Thus, there are a variety of occasions including transfer of technologies in academic and research institutions. As it is hard to recover the technologies once transferred, institutions need to conduct these activities with adequate care for the control.

1. Outline of the Control for Transfer of Technologies

In light of preventing outflow of the controlled technologies that can be diverted to use in development or other related activities for WMD or conventional weapons, FEFTA requires the license from the Minister of Economy, Trade and Industry in case a transaction, wherein (i) a resident aims to transfer such technologies to a non-resident (foreign trade control based on human concepts, which is also known as deemed export control) or (ii) anyone aims to transfer the technologies outside Japan (foreign trade control based on geographical concepts), is to be conducted²⁴.

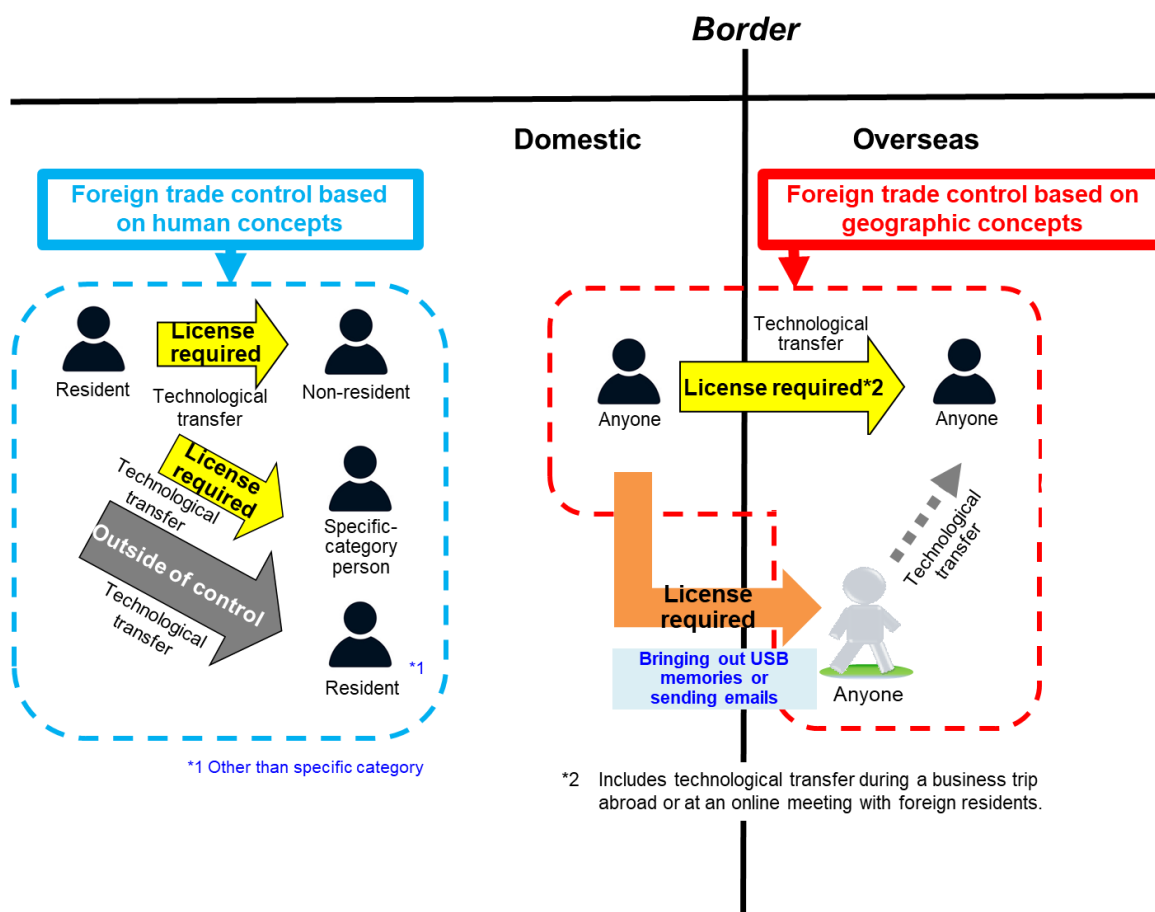

Regarding (i), in addition to transfer to a non-resident, transfer to a resident is regarded as that to a non-resident if the

²³ In addition, care must be taken that on-line lectures, meetings, or talks have a "technology-giving" risk.

²⁴ Paragraph (1), Articles 25 of FEFTA

receiver (resident) is strongly affected by the non-resident (a specific category²⁵ applies), so this case also requires permission from the Minister of METI²⁶.

In addition, to complement the control for these transactions, the license from the Minister of Economy, Trade and Industry is also required in case an action of (iii) bringing out the controlled technologies data in USB drive, etc. ; or (iv) transmitting such digital data to a foreign country, is to be conducted to provide them in a foreign country²⁷. As the license for case (ii) is required before transferring the controlled technologies, it is beneficial to obtain this license prior to the actual technical transactions, including bringing out the data in USB drive or transmitting the digital data.

2. Defining Technical Service Transaction

In the "Service Notification" pursuant to FEFTA, technologies are defined as "specific information required for design, manufacture or use of goods", which will be "provided in the form of technical data or service."

Though the technologies basically associated with the List Control goods are subject to the control, be reminded that there are some List Control technologies (runover technologies) that are independently subject to the control without direct association with the List Control goods²⁸.

²⁵ See page 33.

²⁶ "Service Notification" (regarding act or transaction providing technologies that require a license based on Paragraph 1, Article 25 of FEFTA and Paragraph 2, Article 17 of FEO (4TECB, No. 492) (interpretation of terms in 1(3)))

²⁷ Paragraph (3), Articles 25 of FEFTA

²⁸ Such as the technologies set forth in the Appended Table of the Foreign Exchange Order as employed: "in the use of autoclaves" (Item 4-(iv)); "in the use of numerically-controlled machines or coating equipment" (Item 6-(iii)); "in the design or manufacture of communication equipment using superconductive materials" (Item 9-(iv)); and "in the design, manufacture or use of the testing equipment or the target used therein for measurement of durability of a substance against the laser beam" (Item 10-(vii)).

1) Technical Data

Technical Data means data recorded in such media as documents, disks, tapes or ROMs in a form of blueprints, design drawings, diagrams, models, formulae, design specifications, manuals or written instructions, etc., or computer programs (regardless of the delivery format including on paper or as a digital file).

<Technical Data Examples>

- Technical reports, presentation/publishing manuscripts, research records
- Design drawings, schematics, manufacturing recipe, test manuals, evaluation manuals
- Technical specifications of experimental equipment
- Experimental data
- Computer programs, etc.

2) Technical Assistance

Technical Assistance means such assistance as in a form of technical instruction, skill training, transfer of work knowledge or consulting service.

<Technical Assistance Examples>

- Display or description using presentation software
- Oral research presentation or instruction, etc.

As some academic or research institutions may hold the following technologies for example, be careful in controlling them.

- Technologies for design, manufacture or use of controlled goods, such as reactor, propulsion systems, electronics equipment and precision measuring equipment (including computer programs that are not in open source codes developed independently or modified from commercially available programs)
- Records of know-how on synthesis or separation and refinement of controlled goods, such as toxic chemicals, biotoxins or high-performance materials (data or records not disclosed as a research paper or patent)
- Unpublicized performance evaluation methodology or experimental data on the controlled goods
- Document, data that describes operation techniques or maintenance technologies on controlled research equipment necessary for research activities related with controlled goods, etc.

Even if the intellectual property related to the technologies to provide belongs to an individual researcher instead of the academic or research institution, a proper procedure compliant with relevant regulations is required.

3. Defining Residents and Non-residents

Regarding the concept of residents and non-residents, the government notice “About interpretation and implementation of the Foreign Exchange Laws and Regulations (No. 4672, issued on November 29, 1980)” specifies certain judgment criteria as shown in the accompanying figure.

Institutionally, (i) even a foreigner, who (a) is working in an office in Japan²⁹ or (b) has been staying in Japan for at least six months, is regarded as a resident³⁰, while (ii) even a Japanese is regarded as a non-resident in the case of (a) leaving Japan and staying overseas for the purpose of working in a foreign office, (b) leaving Japan for the purpose of staying abroad for at least two years, (c) having been staying abroad for at least two years after departure, or (d) being subject to any of the three categories described above but temporarily returning home and staying in Japan for less than six months.

	Resident	Non-resident
Japanese	(1) Those who live in Japan (2) Those who work at diplomatic establishments in Japan	(1) Those who left Japan to work at an office in a foreign country and live therein (2) Those who left Japan to live in foreign country for two or more years (3) Those who go to a foreign country and stay therein for two or more years (4) Those who meet any of (1) to (3) above, return to Japan temporarily, and stay for less than six months
Foreigner	(1) Those who work at an office in Japan (2) Those who come to Japan and stay for six or more months	(1) Those who live overseas (2) Those who provide public service in a foreign government or international organ (3) Diplomatic officials or attendants/employees who work at a consulate (limited to those who are appointed or employed overseas)
Corporation	(1) Domestic companies based in Japan (2) Branches, agencies, or other offices of a foreign company in Japan (3) Foreign diplomatic offices in Japan	(1) Foreign companies based in a foreign country (2) Foreign branches, agencies, or other offices of a Japanese corporation (3) Foreign governments' offices or international organizations in Japan

Note: Regardless of the classification above, the US Armed Forces, UN Forces, and constituent members thereof are non-residents.

²⁹ A 2-month foreign employee in a domestic university is a resident if the foreigner lives for two months and receives wages from the university as the main income. However, the employee is a non-resident if the foreigner does not come to Japan and works in a nonresidential state (remote work).

³⁰ If a resident international student returns to the home country holding the enrollment in the university and the residence in Japan, the student should be continually deemed to be a residence at the re-entry.

The country or region judgment of non-residents is based on the location of their houses, addresses, or primary offices³¹. If the destination of list-controlled technology is a country "B" national who works in a research institution that has an office in Country "A," the institute where "B" national works is regarded as the receiver, and Country "A" (not "B") is determined to be the destination country or region.

(i) if the destination of technology is the researcher, the residency is judged according to that of the individual or (ii) if it is not the individual but the organization (including the case where the researcher employed by the organization receives the technology for organizational work), the residency is judged according to that of the organization. This holds true basically for students as well (international ones).

4. Technological and Academic Fields Requiring Control

The "technologies" requiring particular attention of academic and research institutions as potentially subject to the control, pursuant to FEFTA, are those for design, manufacture or use of the goods listed in the List Control goods (pages 10 through 14) and example of the goods that are highly likely to be used for development, etc., of nuclear weapons³²(Commodity Watch List for WMD Catch-All) (pages 17 through 20).

Researchers in these technology fields are required to recognize that their own studies are closely connected to the security of Japan and the international community.

Main technological fields that have close connection with the regulation of FEFTA are listed below. However, other technologies could be additionally subject to regulation. Furthermore, technologies not regarded as state-of-the-art could be also subject to the control. Use the list below as examples of common subject fields.

- *Nuclear technologies (nucleus reactions, neutronics, etc.)
- *Precision machine/processing/measurement technologies
- *Automatic control and robotics technologies
- *Chemistry and biochemistry (in particular, chemicals harmful to human body or detoxicants)
- *Biology including biotechnology and medical science (in particular infectious diseases and vaccines)
- *High-performance/function material technologies (heat-resistant or corrosion-resistant materials, etc.)
- *Aerospace technologies and high-performance engine technologies
- *Navigation technologies
- Marine technologies
- Information-communication, electronics and optical technologies
- *Computer program development technologies for design, manufacture and use of controlled goods
- Simulation programming technologies

Note: Particular attention to the technology fields marked with an asterisk (*) is required because of the strong relationship to WMD.

Technologies across natural sciences including science and agricultural science can be potentially usable for the purposes of security concern not to mention the academic fields such as nuclear power, machine engineering and biotechnology associated with these technology fields.

Specifically, the items are specified in the "Appended Table of the FEO" and the "Appended Table 1 of the ETCO",

³¹ Service Notification (1-(3) Interpretation of Terms)

³² Need to pay attention also to "The Commodity Watch List for Military Catch-All (Item 24 of the Export Precautions No. 24).

while specifications are described in the MOSGT (see page 49).

<Example cases requiring to consider obtaining the license³³>

- Transferring the SiC epitaxial growth technologies to a foreign researcher
- Teaching know-how for maintenance of the thin film generation equipment to a foreign research institution
- Disclosing manufacturing know-how along with licensing the relevant patents to a foreign enterprise
- Transferring technologies for processing/evaluating the semiconductor substrate using devices including the electron-beam printing unit, the vacuum deposition equipment and the electronic microscope to an invited international researcher
- Providing technologies for design/manufacture of microsatellites and associated computer programs therewith to an international trainee

<Past records of license applications by academic and research institutions>

Examples of license applications by academic and research institutions to which the license was issued through proper procedures include: transfer of technology to preform with a carbon fiber as well as for design, manufacture and use of the molded products using the preform; and technologies/computer programs for design, manufacture and use of microsatellites/ground-based stations. For export of goods, the examples include export of a virus for the purpose of vaccine development.

³³ Though storing data in an overseas computer server using the cloud computing storage service will not be subject to the Control if it is only used by the user, keep in mind that using such service as a service provider or to provide a third party with the data is subject to the Control as transfer to other countries (see "Service Notification").

5. Specific-category Approach

1) Overview

On November 18, 2021, the “Notice for Amending Part of the Service Notification”³⁴ was issued. As a result, even if it's a resident-to-resident technological transfer, the transfer to the resident (hereinafter called “specific-category Persons”) is regarded as the transfer to a non-resident on the condition that the receiver (resident limited to natural persons) is strongly affected by the non-resident (hereinafter called “specific category”). Accordingly, the foreign trade control applies according to the human concepts based on Paragraph (1), Article 25 of FEFTA. Such a concept is called “specific-category approach,” which will apply from May 1, 2022.

The conceptual diagram of the specific-category approach is shown below. If Resident A gives technology to Resident B regarded as a specific category, and the latter transfers it to Non-resident C, a license is conventionally necessary for the technological transfer from Resident B to Non-resident C. However, in the specific-category approach, Resident A is obliged to make an application for export permission when the technology is transferred from Resident A to Resident B in the preceding stage.

The specific category falls into three types, which are called Categories 1, 2, and 3. Those to whom the specific category applies are limited to natural residents regardless of their nationalities. This means that even Japanese can be regarded as a specific category.

- (1) Those who make an employment, delegation, service, or any other contract with a corporation or any other group (except for its branch offices, local offices or other offices in Japan, hereinafter called “foreign corporation”) established according to the foreign laws or with a foreign government, government institution, local government, central bank, political party, or any political group (hereinafter “foreign government”), and who submit to commands and orders from the foreign corporation or government or have a good manager’s duty of care for the foreign corporation or government in accordance with the contract, except for the following cases.
- (a) Case where the person concerned makes an employment, delegation, service, or any other contract with a domestic corporation, submits to commands and orders from the corporation or fulfills a good manager’s duty of care for the corporation according to the contract, and an agreement is made between the corporation or person concerned and the foreign corporation or government that the commands and orders from the domestic corporation or the good manager’s duty of care on the domestic corporation have priority over commands and orders from the foreign side or the good manager’s duty of care on the foreign side.
- (b) Case that the person concerned not only makes an employment, delegation, service, or any other contract with a domestic corporation and submits to commands and orders from the domestic corporation or fulfills a

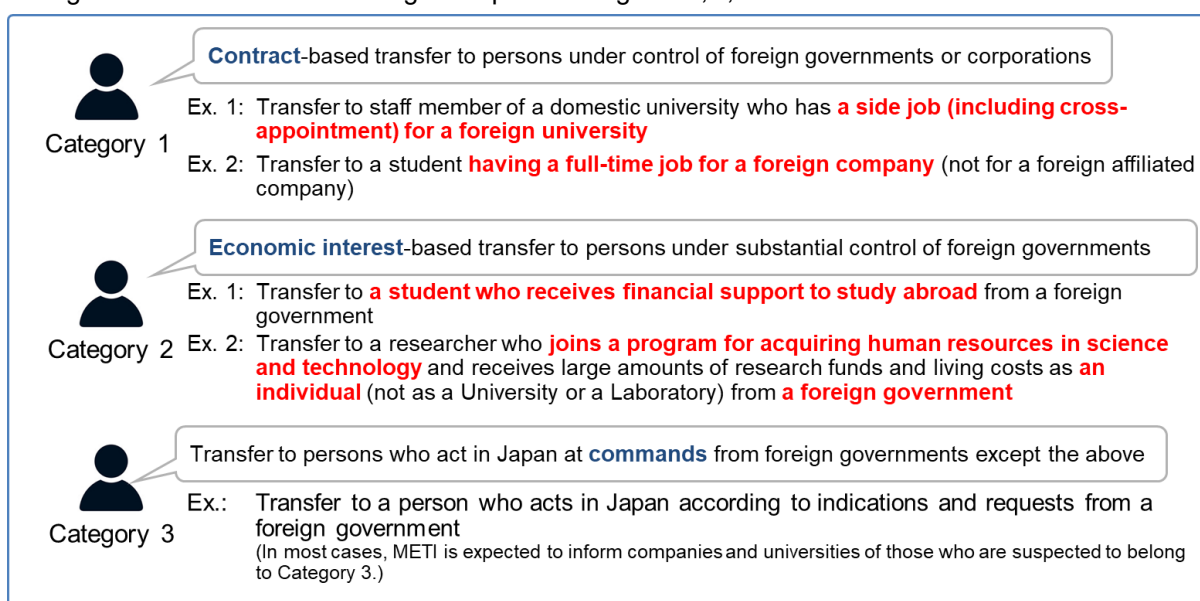

³⁴ Partial revision of transaction or act providing technologies and requiring license based on paragraph 1, Article 25 of FEFTA and Paragraph 2, Article 17 of FEO (4TECB, 492 issued on December 21, 1992) (20211102TECB, No. 1 Export Notes 2021 No. 30 issued on November 18, 2021)

good manager's duty of care for the domestic corporation according to the contract, but also makes an employment, delegation, service, or any other contract with a group foreign corporation (that directly or indirectly holds 50% or more of the voting rights of the domestic corporation, or whose 50% or more of the voting rights are held directly or indirectly held by the domestic corporation, the same applies hereinafter) and submits to commands and orders from the group foreign corporation or fulfills a good manager's duty of care for the foreign corporation according to the contract

(2) Those who gain a large amount of money or other significant profits from the foreign government (equivalent to 25% or more of the annual income of the person concerned when converting in terms of money) or who are promised it

(3) Those who receive indications or requests for domestic action from the foreign government

The figure below shows concrete images of Specific Categories 1, 2, and 3.

2) Description of the specific categories

(a) Specific Category 1

Those who make an employment, delegation, service, or any other contract with a foreign corporation or government belong to Category 1, provided that they submit to commands and orders from the foreign corporation or government or have a good manager's duty of care for the foreign corporation or government in accordance with the contract. If a professor in a Japanese university, for example, works as one in a foreign university, Category 1 applies because the professor submits to commands and orders from the foreign corporation. Category 1 does not apply to foreign students even if they are registered in a foreign university, because they do not make an employment, delegation, service, or any other contract with the foreign university.

The “delegation, service, and any other contracts” do not include all types of contracts and are limited as follows: (i) delegation contract between a managing director, inspector, or similar official (including directors or inspectors of a university) and the corporation and (ii) delegation, service, or any other contract equivalent to an employment contract (that is to say, such contracts are recognized as workability shown in the Labor Standards Act). If a professor makes a publication contract with a publisher to write or receives a request for reviewing a paper or book from another university, the contract is not any of the “delegation, service, and any other contracts” although it depends on the contract and concrete work to be provided. In addition, research requested by a company and joint study between a company and university is not usually recognized as legal workability, so the contract is not any of the “delegation, service, and any other contracts.” However, if the professor is involved in research requested by a company at his/her own discretion and receives commands and orders for work direction and details from the company, the workability may be recognized, resulting in a “delegation, service, or any other contract.”

Meanwhile, Category 1 does not apply even if a “foreign government” places priority on its interest over individuals and obliges them to pledge loyalty as well as they agree to such situations because the relationship between the two is not the same as that between employers and employees from the viewpoints of temporal and spatial restrictions.

As mentioned above, care must be taken that professors and instructors employed by Japanese universities have the possibility of belonging to Category 1, so the transfer of technology from the university to the professors and instructors belonging to Category 1 requires a license based on Paragraph (1), Article 25 of FEFTA as a transaction for transfer from residents to non-residents as indicated in 1(1) mention above. If Professor A employed by a Japanese university transfers technology to Professor or Instructor B in the same university as a job, the university and B are the provider and receiver, respectively. Therefore, care must be taken that the technological transfer between the professors requires a license based on Paragraph (1), Article 25 of FEFTA if the receiver is a specific category.

Specific Category 1 has exceptions. For example, if a Japanese professor works for domestic and foreign universities and agrees that the former command and order rights have priority over the latter ones among the foreign university, the domestic university or the professor, Specific Category 1(a) applies as an exception³⁵.

Those who belong to Specific Category 1 are affected by foreign corporations and governments, so they are not employees of the domestic corporation, a subsidiary of the foreign corporation (so-called foreign affiliated company, not foreign company).

(b) Specific Category 2

Specific Category 2 applies to those who gain a large amount of money or other significant profits from a foreign government or who are promised it. The “a large amount of money or significant profits” accounts for 25% or more of the annual income of the person concerned when calculating in terms of money. Those who receive profits from a foreign government rather than a foreign corporation belong to Specific Category 2. International students coming to Japan, for example, can belong to Specific Category 2 if they receive a scholarship from foreign governments.

³⁵ Specific Category 1(b) is an exception that does not usually apply to university corporations having no group corporation as a capital tie, because this exception applies to those who have a side job in the group corporation.

The gain of a large amount of money or other significant profits refers to that of personal income. If a professor receives profits as the university or laboratory from a foreign government, Specific Category 2 does not apply as a rule. However, care must be taken that Specific Category 2 applies when the professor is perceived to get profits substantially by specifying the university or laboratory as a formal receiver with the intention of evading the regulations based on the specific category approach.

(c) Specific Category 3

Those who receive indications or requests for domestic action from a foreign government belong to Specific Category 3. However, it does not include those who receive indications or requests from a foreign corporation.

Those who are legally obliged to cooperate in national information activities overseas are not Category 3 persons, but Specific Category 3 applies when they receive indications or requests for domestic action from the foreign government according to the corresponding law.

3) How to determine the specific categories

When a person transfers technology to an end-user, the clarification of deemed export control requires determining whether any specific category applies to the end-user to the extent of checks on a duty of normal care to be fulfilled. The concept of the classification of specific categories is indicated in Appended Table 1-3 of the “Service Notification” (guideline for classifying specific categories, which is hereinafter called the “specific-category classification guideline”). Upon technological transfer to an end-user (resident), checks according to the specific-category classification guideline are regarded as the fulfillment of a duty of normal care for whether the resident falls in a specific category. If such checks are made, technological transfer with no license is not a fault; that is to say, neither penalty nor administrative punishment are given for not knowing that the end-user (resident) fall in a specific category.

[Specific-category classification guideline]

Appended Table 1-3: Specific-category Classification Guideline

The guideline for classifying the specific categories is shown as follows. Upon technological transfer to an end-user (resident limited to a natural person), checks according to the guideline are regarded as the fulfillment of a duty of normal care for whether the resident falls in a specific category.

1. Checking whether Specific Category 1 or 2 applies

(i) Case where the resident concerned is not at provider's command and order

- (a) If a written contract generally acquired for planning a service transaction under business practices until its execution (hereinafter called “contract”) includes information that clearly shows that Specific Category 1 or 2 applies but the technology is given to the resident in a desultory manner, it is interpreted that a duty of normal care is not fulfilled.

Note that additional checks are unnecessary if such information does not clearly show that Specific Category 1 or 2 applies until the execution of service transactions.

- (b) If the person concerned receives a notice from METI to the effect that there is the possibility of Specific Category 1 or 2 applying but transfers technology to the resident concerned in a desultory manner, it is recognized that no duty of normal care is fulfilled.

(ii) Case where the resident concerned is at provider's command and order

- (a) It is recognized that a duty of normal care is fulfilled when the resident concerned submits to commands and orders, confirms whether Specific Category 1 or 2 applies by means of self-assessment (see Appended Table 1-4), and during submission, is required to make a report showing that Specific Category 1 or 2 applies newly. It is also recognized that a duty of normal care is fulfilled if the resident concerned submits to commands and orders on May 1, 2022 and is required to make a report showing that Specific Category 1 or 2 applies newly during submission.

Note that if in-house rules including work regulations prohibit acts including side jobs in conflict of interest or there is a system for making an application for them, it is recognized that a report is necessary when Specific Category 1 or 2 applies newly during submission.

- (b) It is recognized that no duty of normal care is fulfilled if the person concerned transfers technology to the resident concerned in a desultory manner when receiving a notice from METI to the effect that there is the possibility of Specific Category 1 or 2 applies.

2. Checking that Specific Category 3 applies

(i) Case where the resident is or not at provider's command and order

- (a) It is recognized that no duty of normal care is fulfilled when the contract clearly shows that Specific Category 3 applies until the execution of service transactions only if the technology is transferred to the resident concerned in a desultory manner.

Note that additional checks are unnecessary if the contract does not clearly show that Specific Category 3 applies until the execution of service transactions.

- (b) It is recognized that no duty of normal care is fulfilled if the person concerned receives a notice from METI to the effect that there is the possibility of Specific Category 3 but transfers technology to the resident concerned in a desultory manner.

The specific-category classification guideline has classification criteria that vary depending on Specific Categories 1, 2, and 3. The criteria also differ depending on whether the receiver is at provider's command and order³⁶. It should be thought that professors and instructors employed by a university have to submit to commands and orders from the provider (that is, a university corporation), regardless of whether they are fulltime or parttime ones, while students are not under such control because they are not employed by the provider (that is, a university corporation).

The following table organizes the key points of the guideline.

³⁶ Being at command and order means that there is an employment relationship or a similar relationship between the receiver and provider. The similar relationship is defined as follows: the actual work has the workability shown in the Labor Standards Act, although it is provided based on a contract other than an employment contract.

Note that, as for checking whether Specific Category 1 or 2 applies, when being at provider's command and order, the resident concerned can use an example of the pledge certificate (see page 131) in Appended Table 1-4 of the "Service Notification" in order to check whether Specific Category 1 or 2 applies by means of self-assessment when the residents submit to command order. Such an example is only a sample, so the user can modify it to the extent that no violation is given to the fact that the resident falls in a specific category³⁷.

The self-assessment does not require the provider to check the content for truth. Accordingly, even if the resident being at provider's command and order falls in a specific category but presents the false self-assessment of specific-category classification, resulting in the unauthorized transfer of technology from the provider to the resident, such transfer with no license is not a fault and neither penalty nor administrative punishment are given, provided that the provider has no additional information about the specific-category classification of the resident.

Meanwhile, if the resident being at provider's command and order does not show that no specific category applies, for example by the denial of the pledge certificate submission, it is not recognized as a rule that the provider fulfills a duty of normal care, because the probability of applying a specific category to the resident is not removed. Therefore, technological transfer from the provider to the resident with no permission has the possibility of penalty or administrative punishment.

	The receiver is not at provider's command and order	The receiver is at provider's command and order	Common
Specific Category 1 Specific Category 2	When information shown in a document including a written contract to be generally acquired for commercial practice-based technological transfer trade clearly shows that the receiver falls in a specific category → It is recognized that no duty of normal care is fulfilled when the technology is provided in a desultory manner.	If specific-category classification is carried out in the following method, it is recognized that a duty of normal care is fulfilled . <Upon adoption> Checks with self-assessment Note: These checks are unnecessary when the specific-category approach applies (or is already adopted on May 1, 2022). <During work> Checks by imposing reporting obligation when a specific category applies newly Note: If in-house rules including work regulations prohibit acts including side jobs in conflict of interest or there is a system for making an application for them, it is regarded that reporting	When METI tells the provider that there is the possibility of applying a specific category → It is recognized that no duty of normal care is fulfilled when the technology is provided in a desultory manner.

³⁷ It is hopeful that records (e.g. pledge certificates) of checking teachers for specific category are properly saved regardless of the classification results as long as technology is possibly given to them. When such action is taken, the record shall be saved as documents related to technological transfer (see page 64).
The pledge certificates can be kept in an electronic form including PDF.

		obligation is imposed ³⁸ .	
Specific Category 3	<p>When information shown in a document including a written contract to be generally acquired for commercial practice-based technological transfer trade clearly shows that the receiver falls in a specific category</p> <p>→ It is recognized that no duty of normal care is fulfilled when the technology is provided in a desultory manner.</p>		

³⁸ Even if the current work rules have no provision showing the prohibition or application system of acts including side jobs in conflict of interest, or have such a provision but it does not apply to some teachers including part-timers, it is recognized that action is taken in accordance with the specific-category classification guideline, provided that specific-category checks are made to require the teachers to submit a pledge certificate with self-assessment after May 1, 2022 regardless of the employment time and to meet an additional requirement for "making a report when a specific category applies in the future."

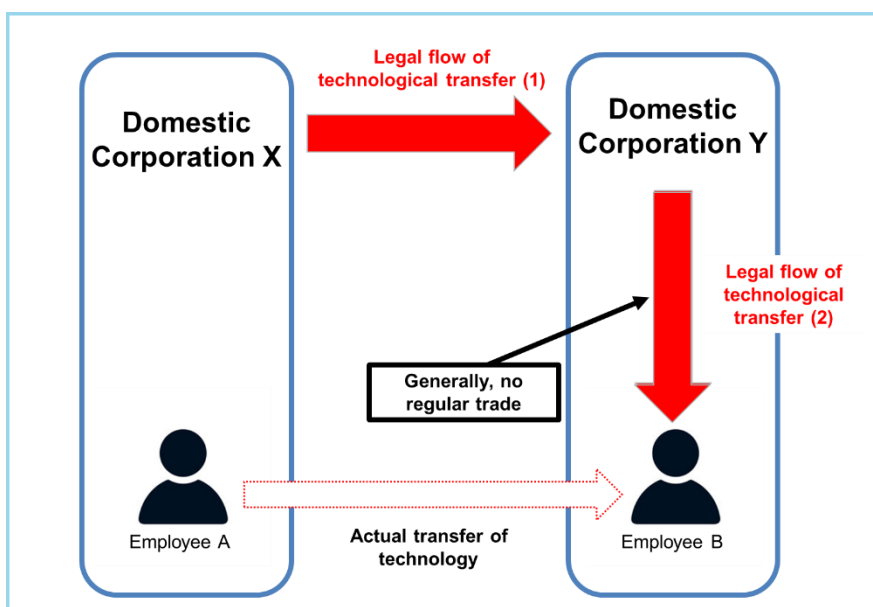

4) Concept of the specific-category approach in joint research

In a university, a professor conducts research jointly with professors and students in different colleges and/or employees of companies, which has the possibility of technological transfer. This subsection describes the concept of the specific-category approach in joint research³⁹ with persons belonging to other corporations.

If in joint research between Companies X and Y in Japan, Employee A belonging to Company X transfers technology to Employee B working for Company Y, and the latter falls in a specific category, the technological transfer is regarded as being legally carried out in the order of (i) from Company X to Company Y and (ii) from Company Y to Employee B (specific category).

To begin with, (i) the technological transfer from Company X to Company Y is not under the control of FEFTA, because the transaction is performed between two residents (corporations) in Japan as well as neither “dealing to transfer technologies outside Japan” nor “dealing with non-residents” does not apply (Paragraphs 1 and 2, Article 25 of FEFTA). In the next step, (ii) the technological transfer from Company Y to Employee B (specific category) is not under the control of FEFTA, because an agreement is made generally between Company Y and Employee B (specific category) for the provider to give technology to the receiver, but the two have no relationship to the effect that the transfer goes on to execute the agreement, which means that such technological transfer is not a “transaction” (Paragraph 1 and 2, Article 25 of FEFTA)⁴⁰. However, there are exceptional cases where Company Y lets Employee B (specific category) receive technology from Company X for the purpose of obtaining technology deviating from the scope of the service trade control and where a technological transfer contract made between Companies X and Y clearly shows that technology is given to Employee B (specific category)⁴¹.

Accordingly, in the technological transfer from Employee A of Company X to Employee B of Company Y, it is generally unnecessary for Company X to check Employee B receiving technology at Company Y for specific category.

³⁹ The same concept applies joint research with no contract between the parties concerned.

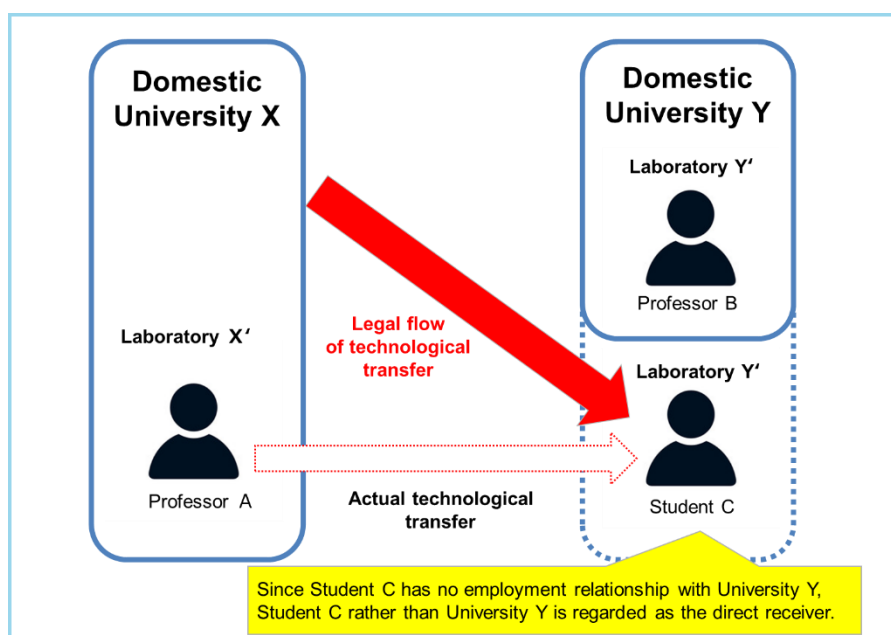

⁴⁰ If Company X transfers necessary technology to Resident A' (employed by Company X) for the purpose of Company X, the technological transfer is regarded as a transaction because a comprehensive agreement based on the employment relationship between Company X and Resident A' for the latter to receive the technology from the former, an individual agreement is made in the technological transfer and reception, and the technological transfer is performed to fulfill the second agreement.

⁴¹ This applies when the names of researchers involved in the joint research are indicated in the contract or plan in writing. In this case, the technological transfer falls into transaction when Company Y which receives technologies have to check Employee B for specific category and to make an application for permission if necessary.

The following describes the case where, in joint research between Laboratory X' of University X and Laboratory Y' of University Y in Japan, Professor A (employed by University X) belonging to Laboratory X' transfers technology to Professor B (employed by University Y) belonging to Laboratory Y' and to Student C (not employed by University Y), and Professor B and Student C fall in specific categories.

In this case, the technological transfer from Professor A of University X to Professor B (specific category) of University Y is regarded as being legally carried out in the order of (i) from University X to University Y and (ii) from University Y to Professor B (specific category). Accordingly, like the example mentioned on the previous page, (i) technological transfer from University X to University Y and (ii) that from University Y to Professor B (specific category) are generally not a "transaction"; that is to say, neither are under the control of FEFTA. Therefore, University X is not required to check the specific category of Professor B who receives the technology at University Y.

Meanwhile, Student C (specific category) is not employed by University Y, so it is not correct to understand that Student C is one with University Y. Since the technological transfer from Professor A of University X to Student C of University Y is regarded as that from University X to Student C, University X shall check Student C for specific category and make an application for permission. However, since Student C is not at the command and order of University X, no specific category applies if a document (e.g. written contract) acquired for the implementation of joint research does not show the specific-category classification⁴².

⁴² As possible operation, Laboratory X' can receive from Laboratory Y' a notice to the effect that all students involved in joint research in Laboratory Y' are not specific categories instead of University X directly checking Student C for specific category when a joint research contract is made in accordance with an agreement between both laboratories as compliance beyond the law.

IV. Procedure for Transfer of Technologies and Export of Goods⁴³

This Guidance uses the following convention of categories.

Items pursuant to laws or items to be unfailingly undertaken for compliance

This category represents direct legal obligations, which can be potentially subject to legal violation charges if neglected. The efforts called for in the "Compliance Requirements for Exporters"⁴⁴ (hereinafter, "Compliance Requirements") are also included in this category.

Required

Items expected to be highly effective for compliance

This category represents efforts that are not legal obligations, nor subject to legal violation charges if neglected, yet can be beneficial for prevention of violations.

Recommended

If you wish to transfer technologies to a non-resident, specific-category persons, or overseas, and to export goods, you have to apply for the license at the METI headquarters or the Regional Bureaus of Economy, Trade and Industry/International Trade Offices if the license is found to be required upon screening of the technologies and goods for Classification in advance.

This chapter streamlines the procedures that can be effective to avoid overlooking in light of compliance and to conduct the procedures pursuant to the relevant regulations.

1. Case-by-case Procedures

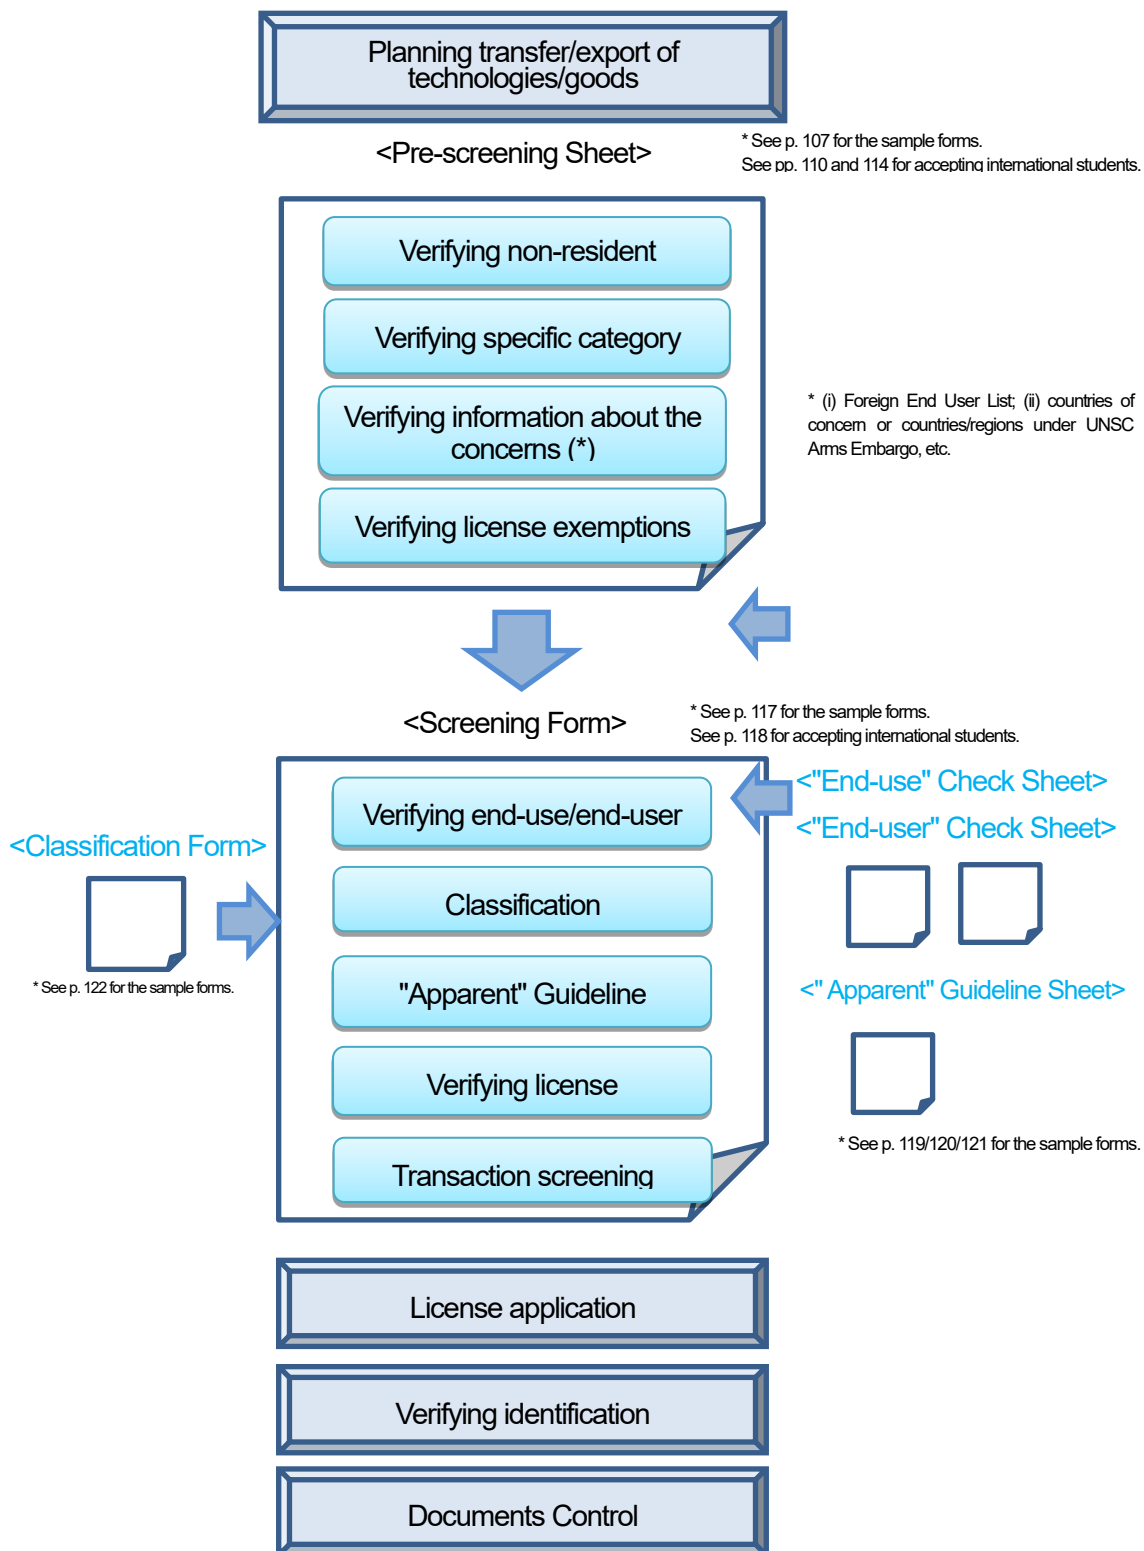

Required/recommended procedures are discussed on a case-by-case basis.

If you wish to transfer technologies to a non-resident, specific-category persons, or overseas, and to export goods, you must conduct the procedures pursuant to the relevant regulations, including verification of the end-user/end-user and Classification, and verifying whether or not the license pursuant to FEFTA is required.

⁴³ As the "Security Export Control Guidelines for Researchers" published by the Japan Society for Intellectual Production (an NPO) describes the security export control procedures through the eyes of a researcher, cross-referencing this guideline should work better.

⁴⁴ See page 79.

Control procedure flow at academic/research institutions

Note: Illustration above is just a reference case and the order of the procedure steps is left to management of respective academic or research institute.

Illustration above is the verification procedure flow. It is recommended that each academic and research institution should know in advance of which technologies and goods are subject to the List Control by FEFTA and in which research department or division they are dealt with, in order to get the transfer of technologies and export of goods

properly managed by such department or division in particular. (Note: See p. 77 for equipment operating technique provided in a research conducted by such researchers as international students.)

Recommended

It is recommended that each academic and research institution should know of the List-controlled technologies and goods as well as their whereabouts in advance to be able to appropriately manage the technologies and goods that are held within the organization.

0) Classification of Specific Categories and Centralized Grasp

Recommended

When accepting students, postgraduates, and staff, each university or research institute is recommended to check them for specific category, to let the export control department centralize information about the specific-category persons, and to work on appropriate action.

With the clarification of deemed export control, before providing students, postgraduates, and staff with technology, each university or research institute shall make sure whether they fall in specific categories, to the extent of confirming the result of fulfilling a duty of normal care⁴⁵.

The specific categories can be classified in each technological transfer, but in this case, an excess burden is possibly put on the operation of universities and research institutes. Therefore, when students, postgraduates, or staff start university or employment, the department in charge of acceptance may cooperate with the export control department in making checks on the specific categories. The university and research institute need to follow the specific-category classification guideline (see page 36) to make checks by asking the employees (e.g. staff) to submit a pledge certificate with self-assessment or acquiring standard documents, including admission-related ones from the non-employed (e.g. students).

The export control department is recommended to centralize the information about the specific-category persons and to work on action appropriate to such persons, for example by filling out the "prescreening sheets" (see pages 107, 110, and 114) to check the scope of technology to be provided if necessary.

In addition, the export control department is expected to properly ask the incumbent staff to make a report of side jobs based on the work rules for checking them for specific category and centralizing the resulting information.

1) Pre-screening

Recommended

In planning to transfer technologies or export goods, it is recommended that staff of the institution should use the "Pre-screening Sheet" to obtain confirmation by Export Control Officer on whether or not issuing the "Screening Form" is required.

⁴⁵ Universities and research institutes can decide to omit such checks on the office workers and students who are not involved in technological transfer because they never act as "end-users." However, care must be taken that if technology is given to them actually and the person concerned is a specific category, there is the possibility of bringing an accusation of intention or mistake.

Regarding the "pre-screening sheets" (see pages 107, 110, and 114), ECO is recommended to make sure that the staff members confirm not only whether the end-user is a non-resident or specific-category person (only when the end-user is in Japan) and what technologies or goods are transferred or exported respectively, but also (1) i) information about the end-user's concerns⁴⁶ and (ii) applicable exemptions (public knowledge and basic science) in order to fill out the "screening forms" (see pages 117 and 118)⁴⁷.

The following shows concrete examples of operation procedures necessary to each university or research institute.

(i) Exporting goods

The staff uses the "pre-screening sheet" to verify (i) whether the end-user is shown in the foreign end-user list and (ii) information about the end-user's concerns, such as whether the destination is a risky or arms-embargoed country or region.

If the end-user has no information about such concerns and the goods are obviously not list-controlled ones⁴⁸, the staff fills out only the "prescreening sheets" and submits them to ECO⁴⁹.

On the other hand, if finding any concerns or there's a possibility of list-controlled goods and that the end-user is a non-resident, the staff fills out the screening forms.

(ii) Transferring technologies

The staff member uses the "pre-screening sheets" to check whether the end-user is a non-resident or falls in a specific category (see page 33) (only when the end-user is based in Japan), (i) whether the end-user is shown in the foreign end-user list, and (ii) whether the end-user has information about concerns, such as the destination is risky or arms-embargoed country or region. In addition, the staff examines exceptions (public knowledge and basic science) (see page 54).

Only when each university checks such exceptions beforehand at its own discretion and no exception applies, it is expected to check whether the end-user is a non-resident or falls in a specific category.

If there is a system in which the export control department of a university centralizes information about the specific-category persons and sends such information about those who have the possibility of transferring technology to a specific-category person to the staff in advance, the staff may handle only the listed persons shown in the notice as a specific-category person.

If the end-user has no risk information and the technology is not listed, the staff fills out only the "pre-screening sheets" and submits them to ECO on condition that: the end-user is based in Japan and is neither a non-resident nor falls in a specific category, and an exception is considered to be applicable because the technology is known to the public⁵⁰ or transferred for research activities in the basic science field⁵¹.

On the other hand, the staff fills out the "screening forms" if the end-user has information of concerns or the goods might be list-controlled ones and the end-user is a non-resident or falls in a specific category one (only when the end-user is based in Japan) and no exception is applicable.

⁴⁶ If the end-user is a specific-category person, check risky information about the non-resident who has an effect on the person.

⁴⁷ However, the verification using the "Pre-screening Sheet" can be exempted, provided that the issuance of the "Screening Form" is apparently required.

⁴⁸ For the list-controlled goods, see the website of METI (https://www.meti.go.jp/policy/anpo/matrix_intro.html).

⁴⁹ If your research department or division deals with controlled technologies or goods, you may start with Classification by utilizing what is already known, in addition to properly controlling the transfer/export of technologies/goods.

⁵⁰ For example, though this may include education with commercially available textbooks only or a curriculum limited to a faculty or lectures, keep in mind that there could be a case wherein the exemption cannot be applied if the research work not in the public domain is to be helped by international students.

⁵¹ For example, though this may include research activities on the cosmic creation process, keep in mind that there could be a case wherein the exemption cannot be applied if the research activities are aimed to design or manufacture a specific product.

Note: If each staff member determines whether the end-user is a non-resident or specific category and whether any exception (public knowledge and basic science) applies, the result may be a violation of the law, so the organization shall make a decision carefully according to the procedures. To put it concretely, ECO makes such checks case by case in accordance with the “pre-screening sheets” provided by the staff, the export control committee, an internal organization, reviews the problems that require detailed examination, and ROEC makes a decision. It is important to make a responsible decision as an organization and to make preparations for explaining the grounds of such a decision to the public as necessary⁵².

Note: As with the case wherein the license exemptions are applicable, there could be a case wherein the technologies or goods are excluded from the control subjects upon responsibly examining the case as an organization, if no transfer/export of technologies/goods is expected⁵³.

Export Control Officer reviews the "Pre-screening Sheet" submitted by the staff and instructs the staff to issue a "Screening Form" if the transaction is determined to be potentially subject to the List Control (see p. 9) or Catch-all Control (see p. 15), to determine that the end-user has the possibility of being a non-resident or specific category, or to require an organizational decision for its legitimacy. Because of this, Export Control Officer, upon instructing the staff to submit additional information when necessary, responsibly makes an organizational decision as to whether or not issuance of the "Screening Form" is required, and if it is, is supposed to instruct the staff to issue the "Screening Form."

Note: If there are concerns but any exception is applicable or the end-user based in Japan is neither a non-resident nor falls in a specific category, a license pursuant to FEFTA is unnecessary. However, to determine whether the transaction goes on or off, checks with the “screening forms” are expected.

Thus, it is important that each academic or research institution adapts the procedure to its own circumstances.

⁵² See IV. Establishing/Operating Framework”.

⁵³ For example, though this may include art/social science curricula, keep in mind that a case which should be subject to control could be included if synthetic aperture radar shall be carried to a foreign country for such purpose as archaeological or other underground explorations.

2) Verifying End-use and End-user

Verification of the end-use and end-user is required in transferring technologies or exporting goods. The verification is required in the "WMD Catch-all Control" and "Conventional Weapon Catch-all Control" (see p. 15), also being a required item in the license application stage if the transaction is subject to the "List Control" (see p. 9).

Required

When the technologies/goods to transfer/export could be used for development, etc., of WMD or other weapons, or, are to be provided to postgraduates or international students who are non-residents or fall in specific categories from the countries or organizations of concern for such activities, the end-uses and end-users have to be confirmed with particular care in light of the "WMD Catch-all Control" and "Conventional Weapon Catch-all Control" as well. Even if the Classification apparently reveals that the technologies or goods are not subject to the List Control, the license is required when it "could be" or "is likely to be" used for such activities.

In dealing with the List-controlled technologies/goods, it is required to set forth the procedure to verify the end-uses and end-users (non-residents who affect the specific-category persons if the latter is an end-user) of the technologies/goods to transfer/export, and to actually verify them following such procedure.

Even if such technologies/goods are not subject to the List Control, they still could be subject to the WMD or Conventional Weapon Catch-all Control. Accordingly, verification of the end-uses and end-users is required in light of the Catch-all Control as well (see p. 15)⁵⁴.

<Orders and Notifications for Catch-all Controls and information for Checking>

		Orders and Regulations	Check Items	Reference Documentation
End-use condition (End-uses of end-users or final consumers)	Technologies	Item (vii), Paragraph (2), Article 9 of the Ministerial Order on Trade Relation Invisible Trade, etc. ⁵⁵ (MOTRIT), "Could be" public notice (Nuclear weapons) ⁵⁶ and "Could be" public notice (Conventional Weapons) ⁵⁷ . Complementary Export Control Notification ⁵⁸ ("Could be" goods/technologies ⁵⁹ , "Apparent" Guideline ⁶⁰)	Uses that could be for development or related activities for nuclear or conventional weapons	Documents including submission from the international students at admission, brochure or website of the graduating school, as well as other verification documents and information communicated by the end-users.
	Goods	Item (iii), Paragraph (1), Article 4 of the Export Trade Control Order (ECO), "Could be" ministerial order (Nuclear weapons) ⁶¹ and "Could be" ministerial order (Conventional Weapons) ⁶²		
End-user condition (end-users or final)	Technologies	Item (vii) Paragraph (2), Article 9 of the MOTRIT, "Could be" public notice (Nuclear weapons) and "Could be" public notice (Conventional Weapons). Complementary Export Control Notification ("Could	Whether or not the end-users will do or have done	

⁵⁴ With the Catch-all Control, unless you were informed by the Minister of Economy, Trade and Industry that license application is required and if it is judged to be "no likely to be subject" upon proper investigation on the end-uses/end-users, it will not constitute a legal violation. However, even after the "no likely to be subject" judgment, if you come to know that the use for development, etc., of WMD is suspected, so notify the Security Export Licensing Division of METI promptly.

⁵⁵ Ministerial Order on Trade Relation Invisible Trade, etc. (Ministerial Order of International Trade and Industry No. 8 of March 4, 1998)

⁵⁶ Potential Use of the Transferring Technologies, Specified by the Minister of Economy, Trade and Industry by Public Notice, in Development, etc., of Nuclear Weapons (Public Notice of the Ministry of International Trade and Industry No. 759, 2001)

⁵⁷ Potential Use of the Transferring Technologies, Specified by the Minister of Economy, Trade and Industry by Public Notice, in Development, Manufacture of Use of Goods Specified in the Middle Field of Item (i) in the Appended Table 1 of the Export Trade Control Order (Public Notice of the Ministry of International Trade and Industry No. 187, 2008)

⁵⁸ Ministerial Precautions on Export Procedures Related to the Complementary Export Control Notification for WMD and Conventional Weapons (Item 24 of the Export Precautions No. 24)

⁵⁹ Exporting goods listed in "The Commodity Watch List for Nuclear Weapons Catch-All" (see pages 17 through 19) or transferring technologies for design/manufacture/use thereof, particularly careful screening is required for exporters. Also, exporting goods listed in "The Commodity Watch List for Military Catch-All" (see page 20/21) or transferring technologies for design/manufacture/use thereof, particularly careful screening is required for exporters. (Item 24 of the Export Precautions No. 24)

⁶⁰ The Guideline for Judging "When Apparent" ("When Apparent" Guideline, Item 24 of the Export Precautions No. 24)

⁶¹ Ministerial Order Specifying Potential Use of the Exporting Goods in Development, etc., of Nuclear Weapons (Order of the Ministry of International Trade and Industry No. 249, 2001)

⁶² Ministerial Order Specifying Potential Use of the Exporting Goods in Development, Manufacture of Use of Goods Set Forth in the Middle Field of Item (i) in the Appended Table 1 of the Export Trade Control Order (Order of the Ministry of International Trade and Industry No. 57, 2008)

consumers)		be" technologies/goods, "Apparent" Guideline) and Foreign End User List ⁶³	development, etc., of nuclear weapons	
	Goods	Item (iii), Paragraph (1), Article 4 of the ETCO, "Could be" ordinance (Nuclear weapons), "Could be" ordinance (Conventional Weapons), and Complementary Export Control Notification ("Could be" goods/technologies, "Apparent" Guideline) and the Foreign End User List,		

Verification of whether or not: the technologies/goods could be used for development or related activities for WMD or other weapons; and the end-users will engage in or have engaged in such activities should be made using such documentation as submission from the postgraduates or international students at admission, brochure or website of the graduate schools, as well as other verification documents and the Foreign End User List. Meanwhile, it is effective to check the "CHASER Information for Universities" provided by Center for Information on Security Trade Control (CISTEC)⁶⁴. If the end-users, as the process moves forward, give information that could be of concern, the case will fall under "Could be" category.

To contact METI for consultation on the screening pursuant to the Controls including Catch-all, the help desk is available in the Security Export Licensing Division (+81-3-3501-2801).

Recommended

For verification of the end-uses/end-users, it is effective to prepare a "Screening Form" and utilize check sheets including "End-use" check sheet, "End-user" check sheet and "Apparent" Guideline sheet.

For this purpose, verifying the end-users or end-users through preparation of, for example, the "Screening Form" (see pp. 117 and 118) should be effective. For details about verification of the end-uses/end-users, see the "Complementary Export Control Notification". "End-use" check sheet, "End-user" check sheet and "Apparent" Guideline sheet are also included in this Guidance as appendix (see pages 119 through 121), which these are effective to be utilized one way to examine the end-use and end-users.

Even when the concern cannot be fully eliminated, it should be still beneficial to conduct the screening process using the "Screening Form" and to record document for the judgment grounds.

3) Classification

This step is for determining whether or not the technologies to transfer or goods to export are subject to the List Control (see p. 9), and is one of the critical procedures under the Security Export Control.

⁶³ The list of organizations concerned to be involved in development, etc., of nuclear weapons, published by METI. As the list gets revised at least once a year. You must get the latest edition.
<http://www.meti.go.jp/policy/anpo/law05.html#user-list> (Japanese)
<http://www.meti.go.jp/policy/anpo/englishpage.html> (English)

⁶⁴ <http://www.cistec.or.jp/service/daigakukaiin.html> (service for pay)

[Orders governing the List Control]

	Governing Cabinet Orders	Governing Ministerial Order
Export of Goods	The Export Trade Control Order (ETCO): A cabinet order pursuant to the provision of Paragraph (1), Article 48 of FEFTA, which sets forth the subject goods in the "Appended Table 1"	Article 1 through 14 of the Ministerial Order Specifying Goods and Technologies Pursuant to the Provisions of the Appended Table 1 of the Export Trade Control Order and the Appended Table of the Foreign Exchange Order (MOSGT): Setting forth more detailed specifications of the goods subject to the Appended Table 1 of the ETCO
Transfer of Technologies	The Foreign Exchange Order (FEO) A cabinet order pursuant to the provision of Paragraphs (1) and (3), Article 25 of FEFTA, which sets forth the subject technologies in the "Appended Table"	Articles 15 through 28 of the Ministerial Order Specifying Goods and Technologies Pursuant to the Provisions of the Appended Table 1 of the Export Trade Control Order and the Appended Table of the Foreign Exchange Order (MOSGT): Setting forth more detailed specifications of the technologies subject to the FEO

The Classification shall be made by comparing the detailed specifications of the technologies/goods with the provisions of the cabinet/ministerial order and verifying the correspondence.

As a basis for the verification, the "Goods/technologies Matrix Table" published in the Security Export Control page of the METI website can be also useful. Additionally, the "Komoku-betsu Taihi Hyo (correspondence list)" or "Parameter Sheet" for a smoother Classification is commercially available.

Even if the equipment or component (the goods) may not be subject to the List Control, be reminded that the technologies themselves to transfer could be subject to the List Control.

It should also be kept in mind that the FEO regulates some technologies (runover ones) without specifying goods⁶⁵.

As a result of the Classification, if the technologies or goods are subject to the List Control and if the license exemptions cannot be applied, the license of the Minister of Economy, Trade and Industry is required regardless of the end-use or destination.

Even if such technologies/goods are not subject to the List Control, verifying the Catch-all Controls for WMD and Conventional Weapons is required (see p. 15).

Note that the security export control website provides the "Guidance for Classification in Universities"⁶⁶ that describes classification procedures for universities along with virtual cases. Use the guidance together.

⁶⁵ For example, while Item (vii)-(b), Article 5 of the Ministerial Order Specifying Goods and Technologies Pursuant to Provisions of the Appended Table 1 of the Export Trade Control Order and the Appended Table of the Foreign Exchange Order specifies a "coating devices ... with a beam current of 5 milliamperes or more" as one of the "coating devices for non-electronic substrates which utilize" the ion implantation method, Item (v), Paragraph (3), Article 18 of the said Order specifies the technology without limiting the specification.

⁶⁶ <https://www.meti.go.jp/policy/anpo/daigaku.html>

<Goods/technologies Integrated Matrix Table>

METI publicizes a table that lists the provisions of cabinet/ministerial orders for the List-controlled technologies/goods. The table allows easier acknowledgment of what kind of the List-controlled technologies are relevant to what goods, reducing the burden on Classification of the technologies.

URL: https://www.meti.go.jp/policy/anpo/matrix_intro.html

The screenshot shows the METI Goods/technologies Integrated Matrix Table search interface. The interface is divided into several sections, with numbered annotations indicating the search process:

- (1) Use "Search."**: Points to the search icon in the top right corner of the interface.
- (2) Selecting "Book" can search all sheets 1 to 15.**: Points to the "ブック" (Book) option in the search location dropdown menu.
- (3) Choose "Column."**: Points to the "列" (Column) option in the search direction dropdown menu. A note below states: "Note: 'Row' may provide partial search."
- (4) Push "All Search."**: Points to the "すべて検索(D)" (All Search) button.

The search results table is displayed below the search dialog. It lists various goods and technologies, including:

ブック	シート	名前	セル	値
kamatsu_e_kimu_matrixfile2901 07.xls	2項	原子力	\$E\$819	炭素繊維、アラミド
kamatsu_e_kimu_matrixfile2901 07.xls	2項	原子力	\$D\$819	炭素繊維、アラミド
kamatsu_e_kimu_matrixfile2901 07.xls	2項	原子力	\$D\$825	(一) 炭素繊維又は
kamatsu_e_kimu_matrixfile2901 07.xls	2項	原子力	\$E\$825	炭素繊維、アラミド 繊維
kamatsu_e_kimu_matrixfile2901 07.xls	2項	原子力	\$D\$839	(三) (一) 又は (二)

The bottom of the screenshot shows a navigation bar with tabs for different categories: 1項 武器, 2項 原子力, 3項 化学兵器, 3の2項 生物兵器, 4項 ミサイル, 5項 先端素材, 6項 材料.

How to use the "Goods/technologies Matrix Table" for the Classification

The following steps are to be taken to verify Classification of computer programs or technologies.

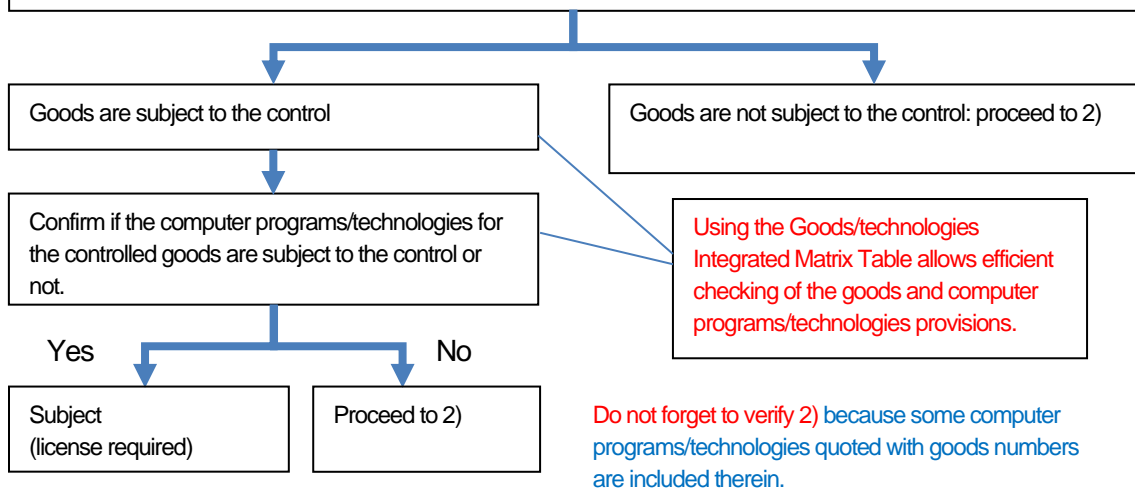

(In actual Classification, a step to verify if the items are "technologies in the public domain" or for "research (activities) in the basic science field," which is omitted here, must be included.)

0) What are the computer programs/technologies to transfer (or to be transferred)?

-> **Identifying the computer programs/technologies**

1) The identified computer programs/technologies are for design/manufacture/use of goods

Confirm if the goods are subject to the control under the Ministerial Order Specifying Goods and Technologies Pursuant to the Provisions of the Appended Table 1 of the Export Trade Control Order and the Appended Table of the Foreign Exchange Order. (Using Excel query function for verification is helpful.) **Keep in mind that the goods might be subject to the control under multiple category numbers!**

2) The identified computer programs/technologies do not match 1), or, you are directed to "proceed to 2)" in the step 1)

Confirm if the identified computer programs/technologies (runover ones) are subject to the control or not under this provision, using the list in the end of each categorized sheet that describes the computer programs/technologies not numbered with goods numbers.

However, keep in mind that it is subject to the Catch-all Control.

Required

Prior to transfer of technologies or export of goods, finalize the transaction details first and then the staffs of each research department from which the technologies/goods are transferred/exported as well as those with expert knowledge of the technologies/goods should conduct the Classification.

The Classification is not something that "can be independently determined by METI as long as the application is submitted", but something that the persons who actually transfer/export the technologies/goods, including academic and research institutions, have to conduct and determine by themselves. The Classification at each academic or research institution shall be conducted by the staffs of each research department from which the technologies/goods are to be transferred/exported as well as those with expert knowledge of the technologies/goods. If such technologies/goods are procured from a manufacturer or its distributor that prevents knowing if they are subject to the control or not, verification should be made by asking for the Classification certificate, etc., from the manufacturer or distributor. In purchasing goods/technologies (including computer programs) to be apparently exported/transferred, it could be a good practice to add a requirement for provision of the Classification certificate to such documentation as the procurement specifications within the institutions.

In doing so, the party to be charged for violation of FEFTA is still the person who actually transfers/exports the technologies/goods even if the manufacturer or distributor makes a wrong Classification. Academic and research institutions should therefore verify the Classification results on their own even when they obtain the Classification certificate from an external party.

Also, though some overseas courier service providers may advise the required procedure at the purchase of the service, it is yet hard for them to conduct the Classification. Therefore, the persons with knowledge of the detailed specifications of the goods still have to execute the Classification.

Required

Persons involved in the transfer of technologies, including those in charge of the faculty or research department, should check the required items following the procedure and obtain the judgment of an appropriate supervisor.

In dealing with the List-controlled technologies/goods based on the Compliance Requirements, the Classification procedure has to be set forth. Though no provisions are set forth on procedure details, a procedure including Classification through issuance of the "Classification Form" as an example is effective. Even if the List-controlled technologies/goods are dealt with, they still could be subject to the WMD or Conventional Weapon Catch-all Control. Accordingly, verifying whether or not such technologies/goods fall into the Commodity Watch List, etc., is required even if such technologies/goods are not subject to the List Control. Use "Goods/technologies Integrated Matrix Table" for Classification of technologies/goods and the "Classification Form" examples (see page 122) for creation of the Classification form.

Required

The Classification has to be made pursuant to the latest list and regulations.

With regard to the List-controlled technologies/goods, the relevant regulations will be revised periodically following the content of the annual agreement of the multilateral export control regime. Accordingly, omitting the Classification assuming "It shouldn't be subject as it was not until last year" might end up violating the regulations. In conducting Classification, be sure to confirm the latest regulations including the List in the Security Export Control section of the METI website, etc., and then determine in light of the latest regulations.

Required

Some technologies or goods can be subject to the control under multiple category numbers. Utmost care must be given in Classification, keeping in mind to avoid overlooking. Using the query function of the "Goods/technologies Integrated Matrix Table" in the METI website to allow easier checking even for technologies/goods subject to the control under multiple category numbers (see page 50).

For example, some technologies for satellite-use IC chip wafer are listed in both Category 7-(1) of the Appended Table of the FEO (Appended Table 1-7-(1) [Integrated circuits] of the ETCO) and Category 9-(1) of the Appended Table of the FEO (Appended Table 1-9-(7) [Encryption equipment or components thereof] of the ETCO). Detailed technical specifications are set forth by the MOSGT, so carefully check them respectively⁶⁷.

Required

In addition, since some technologies/goods are not listed as in a general name, be careful not to overlook them.

For goods that are generally called "GPS", it is defined as 'Devices which receive radio waves from global navigation satellite systems' in the MOSGT, which represents the case not listed in a general name. Therefore, pay attention to avoid potential overlooking by referencing "Terminologies requiring different reading (examples)"⁶⁸ or otherwise.

Required

Also, keep in mind that components or accessories can also be subject to the control.

If components or accessories are set forth by the MOSGT, verification whether or not the components/accessories are subject to the control is required.

Recommended

While it is desirable a person with sufficient knowledge of the technologies/goods to transfer/export to conduct the Classification, a different person should also double-check to ensure objectivity of the Classification.

In an actual case, export of an aircraft equipment was accused of export without a license because the field personnel too easily classified the equipment as not subject to the control because it was meant for commercial use, despite that the non-List-controlled material used had been changed to carbon fiber molding (subject to the List Control).

For instance, more secure Classification can be expected by implementing such process wherein the classification is first conducted by a chief research fellow or a professor and then reconfirmed by the Classification Supervisor (see page 84).

⁶⁷ When filing a license application for transfer of a technology that corresponds to more than one item number, please fill in all such numbers in one application submission.

⁶⁸ https://www.meti.go.jp/policy/anpo/matrix_intro.html (Japanese)

Recommended

If you have questions or concern of any degree, including a case hardly judged even by applying provisions in the regulations, consult the help desk available at your academic or research institution, or METI directly.

Easily assuming "the case should not matter because the item is probably non-subject" and transferring/exporting the technologies/goods that may result in legal violation should be avoided. Most of the violation incidents against FEFTA are caused by the flawed Classification. Classification is crucial for compliance.

Classification should be conducted by such personnel as the staff of each research department who are well knowledgeable about the technologies/goods to transfer/export. If Classification can be hardly made, consult your Export Control Division or METI (see p. 131) instead of going ahead with the questionable transaction without obtaining the license or giving up the transaction itself because of the questions.

4) Examining License Exemptions

(i) Special provision for transfer of technologies (service transactions)

The Ministerial Order on Trade Relation Invisible Trade, etc. (hereinafter "MOTRIT") sets forth the cases of transfer of technologies requiring no license, for they are deemed to be harmless in light of security export control.

If a transaction is deemed to be an exemption case, no license is required even if the technologies to transfer are controlled under the List Control or otherwise⁶⁹. Accordingly, examining whether or not a transaction is an exemption case prior to the Classification in transferring technologies allows quicker verification of whether or not the transaction requires license application. In particular, if the technologies being transferred is highly likely to meet the conditions set forth by Item (ix) and (x), Paragraph (2), Article 9 of the MOTRIT, you should review applicability of the special provision (exemption) prior to the Classification and if the transaction is found to meet the conditions as a result, the technologies can be transferred without conducting the Classification⁷⁰.

However, because leaving the judgment to individual teaching/research staff in applying the exemption can lead to legal violation, be sure to make a careful judgment following the organizational procedure. More specifically, it is important to keep the grounds for the determination accountable in case it is necessary, as well as responsibly examine the case as an organization, e.g., Export Control Officer checks if the exemptions can be applied or not, and then, for a case requiring a closer review, Responsible Officer for Export Control makes the decision after discussion in such a body as the internal export control committee

Contact METI for any unclear matters in applying the exemptions.

⁶⁹ Judgment of whether or not the exemptions can be applied must be made individually for each technology to transfer just as with the Classification pursuant to the List Control, rather than in such a broader unit as per research department.

⁷⁰ The regulations stipulate that the exemption shall be applied to relevant technologies that are subject to the Control. However, if the exemption is determined to be applicable prior to Classification, you may determine that the license is not required without conducting Classification after verifying whether or not the exemption can be applied, consequently for the following reasons: i. the technologies subject to the control will not require a license once the exemption is applied; and ii. technologies not subject to the control do not require a license in the first place.

[Representative special provisions include:]

- ✓ Transactions to transfer technologies in the public domain or to transfer such technologies to make technologies publicly known, wherein (Item 9, Paragraph 2):
- Technologies already disclosed to the general public via newspapers, books, magazines, brochures or files in an electrical communication network, etc., are to be transferred;
- Technologies accessible to the general public through academic journals, public patent information or minutes of open symposiums, etc., are to be transferred;
- Technologies accessible or audible to the general public through factory tours, lecture presentations or exhibitions, etc., are to be transferred;
- Open source programs are to be transferred; or
- The purpose is to provide public access or view through sending academic presentation manuscripts or distributed materials at exhibitions, or contributing to magazines, etc.

Note: For example, the following cases are included:

- Publication as articles or academic presentations to provide public access or view (excluding publications not intended for making all technologies involved be publicly known, through such obligations as non-disclosure to the attendants)
- Publishing on a website for free public view
- Online seminars targeted at the general public or containing technologies disclosed to the general public (excluding those not open to the general public setting certain audience qualifications)
- Lecture or practical work using open information, e.g., commercially available textbooks
- Content of questions and answers within the scope of the technologies presented at, e.g., an academic conference, to make it publicly known
- Before a presentation in an academic conference, send the paper to the conference and a reviewer for procedurally required review.

Note: Meanwhile, in a case of manufacturing a certain chemical substance, for instance, the case will not fall under the exemptions if the specific ingredients, process or additional conditions for manufacture of such substance is not in the public domain even if its formula is.

Note: A case wherein technologies posting for publication in an article, etc., are transferred in foreign countries or to non-residents will neither fall under the exemptions.

- ✓ Transactions to transfer technologies in research activities in the field of basic sciences (Item 10, Paragraph 2); "Research activities on basic science fields" in this context means "research activities that mainly aim at identifying principles of phenomena in natural science fields through theories or experiments and do not aim to develop or produce certain products⁷¹."

For example, the following case should fall under this category:

- Studies on the cosmic creation process
- Studies on subatomic particles theories, etc.

Note: Be reminded that even such "research activities that mainly aim at identifying principles of phenomena in natural science fields" as above will not be deemed as "research activities on basic science fields" if the purpose is to design or manufacture a specific product.

⁷¹ Service Notification (1-3) Interpretation of Terms

Note: Similarly, keep in mind that even if the purpose of the said activities is other than to design or manufacture a specific product, unless they are "research activities that mainly aim at identifying principles of phenomena in natural science fields," they will not be deemed as "research activities on basic science fields."

Note: Also keep in mind that academic-industrial joint research projects will not often fall under the exemptions, including the cases wherein application to a specific product is the purpose of the research.

- ✓ Transactions to transfer a minimum set of technologies required for submission or registration of industrial property rights (Item 11, Paragraph 2)
- ✓ Transactions that provide the buyers, consignees or end-users of the goods with technologies for use of the goods (excluding computer programs and those specified by the Minister of Economy, Trade and Industry by public notice), which is a minimum set of such technologies, accompanied with the export of the goods (Item 12, Paragraph 2)
However, keep in mind that technologies for repair, etc., which could improve performance or characteristics of the goods as a result of the transfer are excluded.
- ✓ Transactions to transfer technologies for use of the goods (excluding computer programs and those specified by the Minister of Economy, Trade and Industry by public notice), which is a minimum set of such technologies for installation or repair, accompanied with the export of the computer programs (Item 13, Paragraph 2)
However, keep in mind that technologies for repair, etc., that could improve performance or characteristics of the computer program as a result of the transfer are excluded.
- ✓ Transactions of commercially available computer programs for design, manufacture or use of computers or communications-related goods (Item 14, Paragraph 2)
However, keep in mind that verification of the end-users, etc., is required pursuant to the "Could be" public notice (see p. 47) if the destination of the transfer is one of the non-Preferred trade partner list countries or of the countries under the UNSC Arms Embargo.
- ✓ Foreign transactions between end-users and the persons who have obtained technology from another person that had obtained a license pursuant to Paragraph 1, Article 25 of FEFTA after identifying the end-user (Item 4, Paragraph 2)
- ✓ Export (bringing out) of technologies along with the aforementioned transactions (specifically set forth by Items of Paragraph 2, Article 9 of the MOTRIT.) (Item 1, Paragraph 1)
- ✓ Export (bringing out) of technologies along with foreign transaction from the person that had obtained a license pursuant to Paragraph 1, Article 25 of FEFTA (Item 2, , Paragraph 1)

Also, there are additional conditions to consider in determining whether or not the exemptions can be applied.

Required

Keep in mind that even technologies to be published in the future may require the license.

If the transfer of technologies is to make it publicly known, including posting technical articles to a foreign journal, the license is not required. However, transferring technologies through such obligations as non-disclosure to the end-users or internally disclosing them to a few people prior to the submission with patent application in mind, in neither of which the general public should be able to know of the technologies, will not constitute a license exception case.

The "technologies in the public domain" set forth by Item 9, Paragraph 2, Article 9 of the MOTRIT. are defined as "technologies open or accessible to the general public." The definition is made in light of the Security Export Control and if the technologies can be only known to particular persons, regardless of presence/absence of non-disclosure obligations, will not be deemed as "in the public domain."

<University research and the classification>

For transactions wherein the technologies to transfer are in the public domain or technologies are transferred for research activities in the basic science field, the license of the Minister of Economy, Trade and Industry is not required as an exemption case (see page 54). Accordingly, the license is not required if the transfer of technologies is to the extent in the public domain, including research instructions at a university using and within the scope of the commercially available books and published articles. Setting up required procedure depending on the circumstances of each academic/research institution, including carefully examining whether or not the license exemptions are applicable under direction of the Classification Supervisor, and If not, precisely classifying the items by issuing the Classification Form, should be effective.

Recommended

In such research activities as publishing articles, making academic presentations or patent filings, it is important to consider aspects not only based on government requests or regulations for Security Export Control, but also from social and scientist ethics.

Some research findings may contain potential diversion to development, etc., of WMD or other weapons and depending on the content of publishing could lead to consequences that promote proliferation of such weapons.

In addition, though it is important to file patents to protect the research findings, the patented technology information will be almost automatically published in 18 months from the filing, with some of the information may contain security-sensitive technologies.

Accordingly, though it is not a legal obligation, it is also important to incorporate provisions based on scientist ethics into compliance with self-directive code of conduct as a scientist and internal compliance procedure as an organization, so the social aspects in light of preventing proliferation of WMD or other weapons as well as based on scientist ethics can be considered.

Excerpts from "Statement: Code of Conduct for Scientists," January 25, 2013, Science Council of Japan⁷²

I. Responsibilities of Scientists

(Basic Responsibilities of Scientists)

1. Scientists shall recognize that they are responsible for assuring the quality of the specialized knowledge and skills that they themselves create, and for using their expert knowledge, skills and experience to contribute to the health and welfare of humankind, the safety and security of society and the sustainability of the global environment.

⁷² <https://www.scj.go.jp/ja/info/kohyo/pdf/kohyo-22-s168-1.pdf> (Japanese) https://www.scj.go.jp/ja/scj/kihan/kihan.pamflet_en.pdf (English)

Recommended

Even for transfer of technologies in the public domain or for research activities in the basic science field, it is important that academic and research institutions carefully examine the transactions to determine whether or not the transfer is allowed when there are concerns over the end-user or the end-use.

To prevent suspicious transactions with an end-user of concern through such an opportunity as a joint research project driven by the transfer of technologies in the public domain or for research activities in the basic science field, academic and research institutions should internally examine the transaction to determine whether or not the transfer is allowed even for technologies in the public domain.

(ii) Special provision for goods control

Article 4 of the ETCO sets forth the goods to which the provision of Paragraph 1, Article 48 of FEFTA is not applied.

[Representative special provisions include:]

- ✓ Goods imported without charge for the purpose of export without charge, which are specified by the Minister of Economy, Trade and Industry by public notice (Item ii-e, Paragraph 1, Article 4 of the ETCO)
 - Goods that were exported from Japan which are to be repaired back in Japan and then re-exported (Item 1-i of the No Commercial Value Public Notice⁷³)

Note: The List Control is prerequisite for this special provision and "goods that were exported from Japan" herein are List-controlled goods with obtained license. Accordingly, if a prototype gets repetitively repaired in a joint research project of a university, keep in mind that the license is required for the first export and that such repairs must not improve the performance of the prototype as of the exports to follow. Also keep in mind that this special provision cannot be applied to equipment purchased from abroad that is going to be returned for its repair.

- ✓ Goods to be exported without charge for the purpose of import without charge, which are specified by the Minister of Economy, Trade and Industry by public notice (Item ii- vi, Paragraph 1, Article 4 of the ETCO)
 - Goods to be carried by a temporary exit traveler or listed in the middle field of Item 9 of the Appended Table 1 of the ETCO (exclusively those for goods listed in (vii), (viii), (x), or (xi)) to be shipped separately upon customs clearance that correspond to either Items 9, 10, 12 or 13, Article 8 of the MOSGT and are deemed to be provided for use of this traveler (Item 2-v of the No Commercial Value Public Notice)
 - Goods to be carried by a temporary exit traveler or listed in the middle field of Item 12 of the Appended Table 1 of the ETCO to be shipped separately upon customs clearance that correspond to Item xiii, Article 11 of the MOSGT and are deemed to be provided for use of this traveler (Item 2-viof the No Commercial Value Public Notice)

Note: This special provision is for own use of components of encryption-related goods and self-contained diving equipment.

⁷³ Goods Imported without Charge for the Purpose of Export without Charge and Goods to be Exported without Charge for the Purpose of Import without Charge, which are Specified by the Minister of Economy, Trade and Industry by Public Notice Pursuant to Items (ii)-(e) and (f), Paragraph (2), Article 4 of the Export Trade Control Order (Public Notice of the Ministry of International Trade and Industry No. 759, 2001)

✓ The low value exemptions (Item iv, Paragraph 1, Article 4 of the ETCO)

If the List-controlled goods fall under the following (ii), (iii), or (v) category and are within the designated value, the export license is not required.

Goods category	Exempted or not / Value to apply
(i) Goods listed in the Appended Table 1-1 through 1-4 of the Export Trade Control Order (ETCO)	Not applicable
(ii) Goods listed in the Appended Table 1-5 through 1-13 of the ETCO, excluding those in (iii) below	Equal to or less than one million yen
(iii) "Goods listed designated by the Minister of Economy, Trade and Industry pursuant to the provision of the Appended Table 3-3 of the ETCO (Appended Table 3-3 Announcement)"	Equal to or less than fifty thousand yen
(iv) Goods listed in the Appended Table 1-14 of the ETCO	Not applicable
(v) Goods listed in the Appended Table 1-15 of the ETCO	Equal to or less than fifty thousand yen
(vi) Goods listed in the Appended Table 1-16 of the ETCO	Not applicable

Note: The total value is determined based on the sum of each bracketed item number⁷⁴ of the List-controlled goods described in the agreement, regardless of the shipment times.

Note: For goods of no commercial value, the value is determined based on the value assessment by Customs.

Note: Not applicable to the List-controlled technologies.

Note: Not applicable to exports to non- Preferred trade partner list countries if the items could be used for development, etc., of WMD or conventional weapons.

Note: Not applicable if destined for North Korea, Iran or Iraq.

5) Transaction Screening

Upon checking items 1) through 3) above, the transaction shall be screened for whether or not the license application is required or the transfer/export of technologies/goods is appropriate. If the items are subject to the List Control, keep in mind that the license application is required regardless of end-uses/end-users thereof.

When it is apparent that the technologies/goods to transfer/export are not subject to the List Control, verify whether or not they could be used for development, etc., of WMD or conventional weapons.

More specifically, obtaining license is required if (i) they have been determined as "could be" in the end-use/end-user verification or you are informed by the Minister of Economy, Trade and Industry that license application is required.

However, this shall not apply when the address, residence or destination of the end-user is in one of the Preferred trade partner list countries; the technologies to transfer are for use of lumbars; or the goods to export are foods or lumbars, all of which are not subject to the 16 categories of the Appended Table of the FEO or of the Appended Table 1 of the Export Control, in which the license is not required.

⁷⁴ The low value exemptions are applied to the "total value" of those goods to export individually classified as requiring a license according to the brackets set forth by the Appended Table 1 of the Export Control Order (such as "Item 7-(iv)" or "Item 10-(vii-2)"), per each export agreement. <https://www.meti.go.jp/policy/anpo/qanda11.html>

Required

Be sure to make it clear in the transaction screening for transfers of technologies that there is no security concern, verifying whether or not: the end-user has a fixed address; has clearly exhibited the end-use of such technologies; or the end-use has no room for doubt.

METI is issuing the license pursuant to the following criteria⁷⁵:

Whether or not it is probable that the technologies:

- (i) are delivered to the actual end-users;
- (ii) are used by the persons stated in the application form as the end-users;
- (iii) and products made thereof are not for uses that could preclude preservation of the peace and security of the international community; and
- (iv) are properly managed by the end-users.

The license may not be issued if any aspect is found to be questionable based on these criteria. Thus, all these four criteria have to be clarified in examining transfers of technologies, carefully determining appropriateness of all aspects, including whether or not the transaction counterpart is surely the described end-user or could be making a false request misrepresenting the end-use.

Required

Be sure that Responsible Officer for Export Control appointed by your academic or research institution determines, as a whole organization, if the transfer of technologies is appropriate or not, and if the Classification or Transaction Screening results in requiring the license.

Internal examination of appropriateness of the transfer of technologies under the control by academic and research institutions is important for prevention of any questionable transactions. In dealing with the List-controlled goods, in particular, it is necessary to assign such organizational representatives as Vice President or Vice Chairperson to Responsible Officer for Export Control (ROEC) and President or Chairperson to Chief Export Control Officer (CECO).

(6) License Application

When the technologies to transfer or goods to export are determined to require the license pursuant to FEFTA, submit the license application to a service office with documents required to obtain the license from the Minister of Economy, Trade and Industry.

When the license is required, the application shall be submitted to the responsible service office (METI headquarters or Regional Bureaus of Economy, Trade and Industry/International Trade Offices) (i) at the submission counter; (ii) via post-mail; or (iii) by digital submission (NACCS trade control subsystem) for the license⁷⁶.

Since required documents include Service Transaction License Application Form and Export License Application Form, as well as associated documents (e.g., statement of reasons to apply, agreements, brochures/specifications, pledge certificate certificates from the transaction counterpart), which depend on the subject item number of the ETCO or the destination, check what will be required using the Security Export Control website⁷⁷, etc.

⁷⁵ Service Notification (2-(5) License for Service Transaction)

⁷⁶ After July 2022, an application for export permission will be limited to electronic ones in principle. https://www.meti.go.jp/policy/anpo/oshirase_denshishinsei.pdf (Japanese)

⁷⁷ <https://www.meti.go.jp/policy/anpo/apply01.html> (Japanese)

Recommended

In transferring the List-controlled goods or technologies, the "bulk export license system"⁷⁸ that allows to comprehensively obtain multiple licenses within a specified range can be used if the applicant is deemed to have established the Internal Compliance Programs (hereinafter, "ICP") based on the subject compliance provisions including FEFTA, under which appropriate control is secured.

Grant of the licensing pursuant to FEFTA is determined through reviews in security aspects independently per agreement or transaction. If the applicant itself has capability for these reviews under voluntary control, a bulk license can be granted. With this system, time and effort for filing multiple applications for reviews can be saved.

As conditions to obtain the Special General Bulk Export License or Special Bulk Export License within the bulk licenses, establishment/notification as well as secure implementation of the ICP is required.

7) Ensuring Identification

When a license is granted, technologies/goods can be transferred/exported within the scope of the license.

Required

Be sure not to go beyond the scope of the granted license.

In dealing with the List-controlled technologies/goods, it is required to ensure whether or not the controlled technologies/goods to be actually transferred are identical to those licensed. Even if the List-controlled technologies/goods are not dealt with, it is important to ensure the identification lest such controlled technologies/goods should be shipped to countries/organizations of concern. Make efforts to avoid violations using the marking (see page 83) or other tools.

Required

If any collateral conditions are provided to the license, be sure not to violate them as well.

Upon granting the license, some conditions might be appended, e.g., that the licensee has to notify METI prior to re-exports in the future or to submit regular reports on status of the use of the goods/technologies licensed to export/transfer. Accordingly, pay close attention to these collateral conditions to avoid violation.

A fine is imposed as a penalty to a violation of the permission requirements.

8) Record Keeping

In light of proving compliance, be sure to appropriately maintain/retain related documents including the records of screening.

Document retention is also important as an evidence of the maintenance status when an incident occurs.

Specific retention schedules considered to be desirable are: at least seven (7) years for transfer of technologies or

⁷⁸ See page 86.

export of goods related to weapons or WMD with which ensured security export control is considered to be critical (the Appended Table 1 of the ETCO and the middle fields of Categories 1 through 4 of the Appended Table of the FEO); and five (5) years for transfer of technologies or export of goods related to conventional weapons (the Appended Table 1 of the ETCO and the middle fields of Categories 5 through 16 of the Appended Table of the FEO). (see p. 64)

2. Regular Procedures

Sections to follow discuss required/recommended regular procedures.

1) Awareness, Education and Trainings

Required

To prevent unintended outflows of technologies or goods as well as associated legal violations, it is essential that every single researcher who deals with the controlled technologies or goods understands the control by FEFTA and practices the compliance.

The purpose of controlling the sensitive technologies and goods is to prevent abuse of them for development, etc., of WMD or other weapons, rather than to hinder advancement or global expansion of academic researches.

Major nations in the world, including Japan, have been controlling security exports under the international harmonization framework mainly consisting of developed nations.

Academic and research institutions as well are required to practice necessary education/training for compliance pursuant to the compliance standards. In dealing with the List-controlled technologies/goods, it is required to make efforts to practice training to ensure that the transfer or export shall be appropriately conducted.

In academic and research institutions, every single researcher needs to make at-most efforts to practice compliance, through education including attending training courses at such institutions upon understanding that the security export control in Japan is a system fundamentally relying on each involved person's voluntary awareness.

Required

Be sure to collect such information on the control system as the latest regulations, and ensure that organizations concerned are aware and get educated.

Practicing necessary education for compliance pursuant to the compliance standards is required. In dealing with the List-controlled technologies/goods, it is required to make efforts to practice training to ensure that the transfer or export shall be appropriately conducted. Always pay attention so as not to violate the regulations due to ignorance of such information on the control system as the latest regulations.

METI distributes the latest information including revision of acts via email to the parties with registered ICP as part of the voluntary control, in addition to providing the latest information about security export control on its website⁷⁹. METI also conducts the security export control orientations to get significance of the security export control and specific export control examples broadly understood, which should be utilized as an opportunity for getting updated.

⁷⁹ <https://www.meti.go.jp/policy/anpo/index.html>

Required

Persons in clerical or classifying roles at academic and research institutions for control of technologies to transfer should take training courses to obtain and understand the latest regulatory information.

Persons on the research side should also attend education/training programs implemented at his/her academic or research institution pursuant to the compliance standards, and make efforts to be compliant.

As orientations, including ones jointly held by MEXT and METI, are held in different locations every year for providing the latest information such as details of revision of acts and international situation concerning security, every academic or research institution are encouraged to actively attend them⁸⁰ for better knowledge and skills as well.

Recommended

It is also important that academic and research institutions intend to raise the level of awareness of the control across the organization, conducting education/training also for senior staff, researchers and all employees in addition to persons in clerical or classifying roles for technologies to transfer.

Control of sensitive technologies at academic and research institutions requires integrated functioning of many different departments concerned in a practical way. It is recommended to maintain awareness and understanding by each and every staff including such senior staff as President and Chairperson through to researchers and other employees at higher levels, for healthy advancement of academic researches as well as for compliance.

For these purposes, it is also important to manage to help improve the controlling mindset of the staff unable to attend orientations taking advantage of e-learning, etc., in addition to making efforts to enhance awareness of the control as the whole academic or research institution, utilizing such opportunities as the executive board or faculty council as well as regularly holding the orientations for the whole organization.

Recommended

Remember also to periodically offer reminders and education/training for management of the controlled technologies or goods to international offices and remote campuses.

2) Audits and Reporting

Required

Be sure to set forth the audit structure and procedures and conduct periodic audits.

In dealing with the List-controlled technologies/goods based on the compliance standards, setting forth the audit structure and procedures for checking whether or not the control of sensitive technologies at academic and research institutions is properly implemented pursuant to the regulations is required and efforts to conduct the audits periodically have to be made. Holders of the controlled technologies or your Export Control Division should be involved in nominating the audit subjects and conducting such audits, even if such audits are conducted as an institution-wide event due to the circumstances of each academic or research institution.

More simplified options including asking for self-checking by periodically distributing questionnaires regarding practice of the control to holders of the controlled technologies or the control personnel, using the Intranet or internal email network, should be effective.

⁸⁰ <https://www.meti.go.jp/policy/anpo/seminar00.html> (Japanese)

Required

If anyone finds that a controlled technology has been or could have been transferred without a license, report promptly to your Export Control Division and the Minister of Economy, Trade and Industry to seek and take a corrective measure as the organization.

If violation of relevant regulations has or could have occurred in dealing with the List-controlled technologies/goods based on the compliance standards, reporting the incident to the Minister of Economy, Trade and Industry and the implementation of the recurrence prevention measures is required.

Even if the List-controlled technologies/goods are not dealt with, the prompt reporting and responding must not be neglected in order to prevent proliferation of the sensitive technologies or minimize the risks of threatening the nation-wide security.

3) Record keeping

Required

Be sure to properly retain documents or electromagnetic records for transfer of technologies.

In dealing with the List-controlled technologies/goods based on the compliance standards, efforts to retain the relevant documents, drawings and/or electromagnetic records for an appropriate period of time. Even if the List-controlled technologies/goods are not dealt with, it could help later to retain documents and/or electromagnetic for the transfer of technologies made through the final decision to go for it after issuing the Screening Form at least because the concern was not totally eliminated, to prove that the transaction was properly handled in compliance with the regulations, in case violation should be suspected.

Specific retention schedules considered to be desirable are: at least seven (7) years for transfer of technologies or export of goods related to weapons or WMD with which ensured security export control is considered to be critical (the Appended Table 1 of the ETCO and the middle fields of Categories 1 through 4 of the Appended Table of the FEO); and five (5) years for transfer of technologies or export of goods related to conventional weapons (the Appended Table 1 of the ETCO and the middle fields of Categories 5 through 16 of the Appended Table of the FEO).

Documents to be recorded/retained are considered to include the following:

- Records of screening⁸¹ (in the form of Screening or Classification Form, with dates of the transfer, destined end-users and countries, transferred technologies, corresponding item numbers and commercial values);
- licenses granted by the Minister of Economy, Trade and Industry; and,
- agreements, purchase requisitions, order sheets, letters and invoices, etc.

With regards to the technical information to transfer, submit it to your Export Control Division together with other documents to maintain the record of transfers.

⁸¹ The records include documents (e.g. pledge certificates) related to checking the end-user who provides technology for specific category.

Recommended

Accumulating and utilizing daily control records shall be of great help for more effective and efficient control, helping understand which department in the academic or research institution holds what type of the controlled technologies.

4) Information Management

Recommended

Access to the List-controlled technologies should be controlled in particular.

Routine management of the information, to prevent outflow of the controlled technologies in an unexpected manner, including theft or unauthorized access, is effective.

A growing number of organizations have been developing information on security standards that set forth management of ID/passwords and handling of information devices. As academic and research institutions must have already implemented rules for information security, it should be effective to utilize those for the technical information access control as well. If your organization is without such information on security rules, refer to the following examples of initiative of an organization without such rules.

[Examples of initiative of an organization without security information rules]

Preferably, implement the following measures since improved level of technical information control can be expected.

1) Management of such information devices as PC that stores the controlled technologies

(i) Personal authentication

For personal computers storing the controlled technologies as data or in a different format, setting and periodically changing the login password is required. Be sure not to share a password with others or post a password note on your PC.

(ii) PC control and restricted connection of USB drives, etc.

Carrying PCs out of the office and connecting USB drives, etc., to other PCs has to be controlled. Another way to control is to encrypt the data stored in the hard disk or memories, providing against loss of PCs or USB drives. Keep in mind that such real incidents as getting PCs stolen in overseas business trips have taken place.

It is also important to organizationally examine the necessity of restricting install of a file exchange application (e.g., Winny) that causes unintended leak of information.

(iii) Anti-theft control for PCs

A growing number of thefts of PCs are taking place in academic and research institutions. Implementing such a measure as attaching a wire lock to PCs will also enhance the protection of the technical information therein.

2) Management of such shared database as servers

(i) Access control

If data of the controlled technologies are stored in a research department, etc., limiting persons accessible to such information and thoroughly controlling IDs and passwords is the basic of security.

(ii) Storing access logs

It is also important to properly save the data access records, which shall be necessary in identifying the leakage route in case of the technology outflows.

(iii) Restricting external access

If the Intranet is used, it is a common practice to prohibit/restrict external access (e.g., from international offices) to the Intranet.

In permitting transmission or download of electronic data, securing means to verify the destination is desirable. An idea is to bi-directionally use the Public Key Infrastructure (electronic signature), if available, in using the network. This should be able to prevent so called "masquerading."

3) Encryption of technical information

In sending email or fax with information of the controlled technologies attached, control of the addressee information to avoid wrong transmission as well as setting the read password for or encrypting the digital files as an anti-leakage measure for such technical information shall help prevent actual problems even when it inadvertently outflows. Making efforts to protect technical information through these measures is required.

4) Organizational measures (hardware side modification, etc)

(i) Using thin client systems

Some organizations are recently using a system in which the personal terminal PCs in the organizations have no such recording device as hard drive, while data are centrally managed at the server side and cannot be stored in the terminal PCs (i.e., a thin client system).

(ii) Measures to stop unauthorized access

In addition, organizational assessment and implementation of such counter measures as physical isolation or protection of the servers or the storage locations of critical documents, as well as stopping unauthorized external access, is required.

(iii) Anti-spyware (malware) measures

Many different types of malicious spyware are found in these days that infect PCs through browsing website or receiving email and send internal data outward before you know it or create a path that allows easy access to the PCs from outside. For information devices that are networked to an external, normal Internet connection, organizationally taking periodic measures to clean such malicious spyware is required.

(iv) Precautions for information device disposal

Before disposing unused PCs, be sure to completely erase data remaining in the hard drive using commercially available data destruction software. Erasing digital files using common PC functions rather easily allows recovery of the data because they physically remain in the hard drive as magnetic information. When an external disposal service provider is used, be sure to ask for complete data erasure of the hard drive and issuance of a certificate to prove that. Using these measures helps prevent data leakage from PCs.

Unfair Competition Prevention Act

The Unfair Competition Prevention Act (Act No.47 in 1997) is an act to provide for matters such as measures for the prevention of unfair competition and compensation for damages caused by unfair competition, in order to ensure fair competition among business operators.

Pursuant to this Act, a "trade secret" is defined as information held by business entities that meet specific conditions (Note 1), and such entities may seek injunction/damages against such actions as unauthorized acquisition/use, which is also subject to a criminal charge.

Note 1: The trade secret must satisfy three requirements: it is (i) controlled as secret (confidentiality); (ii) useful business or technical information (usefulness); and (iii) is not publicly known (non-public nature). In the "Guidelines for Trade Secret Management,"⁸² key features to be under legal protection as "trade secret" are described.

In 2015, the following measures were introduced to further enhance protection of trade secrets held by business entities:⁸³

<Criminal charges>

(i) Increased maximum fine for the trade secret infringement

Individuals 10 million yen -> 20 million yen

Juridical persons 300 million yen -> 500 million yen

(ii) Severer punishment for overseas use

Acquisition or disclosure of a trade secret to be used in foreign countries or for that purpose shall be more severely punished (higher fines were stipulated).

Individuals 30 million yen

Juridical persons 1 billion yen

(iii) Introduction of optional confiscation of the criminal proceeds

A provision that criminal proceeds from the trade secret infringement can be confiscated by judicial decision has been appended.

Also, the "Handbook for Protecting Secrets at Universities"⁸⁴ published in October 2016 to ensure protection of such secrets in academic institutions says that (i) knowing/classifying secrets and implementing required measures; and (ii) considering participation of students in research activities and obtaining their personal pledge certificate for non-disclosure are important.

Technology Information Control System

METI started the technology information control system (hereinafter called the “certification system”) based on the Act on Strengthening Industrial Competitiveness in September 2018 and has operated it to allow certification bodies authorized by the government to check whether a corporation has a system for properly controlling information including its own technologies

In the certification system, the corporation identifies its own important information and ones (e.g. technologies) received from others, determines preventive measures against outflow or leakage to be taken according to the mode and value of the information, builds a control system for such important information, and submits an application to a certification body to obtain certification. After that, the certification body evaluates the control system established by the corporation and gives a license if the system meets the requirements.

The license allows the corporation to show the customers that its own system properly controls important information including technologies. Therefore, the corporation can not only have merits, such as helping to acquire confidence from the customers and making it smooth to exchange information and complete projects, but also raise awareness of the proper in-house control of important technological information.

The website of METI⁸⁵ promotes the certification system and provides pamphlets⁸⁶, training materials⁸⁷, and self-check sheets for easily evaluating activities necessary to protect important technological information including technologies in the corporation in order to support good information control. I hope they can be useful for you.

⁸⁶ https://www.meti.go.jp/policy/mono_info_service/mono/technology_management/pdf/pam.pdf

⁸⁷ https://www.meti.go.jp/policy/mono_info_service/mono/technology_management/pdf/kensyuu.pdf

V. Procedures for Various Cases

In Chapter IV., the basic flow of the procedures for transfer of technologies and export of goods pursuant to FEFTA is discussed. This chapter discusses procedures required/recommended for each practical scenario of academic and research institutions.

Keep in mind, however, that the following license-requiring cases shall not forbid transfer/export of technologies/goods across in whole, but shall allow such transaction upon obtaining a required license.

1. Controlling Transfer of Technologies to Students/Postgraduates/Staff

1) License-requiring scenarios

Required

A license is required to transfer the controlled technologies to international students/postgraduates staying in Japan for less than six (6) month without being employed by a Japanese university.

Even for domestically conducting transfer of technical information including the list-controlled design drawings, specifications, samples/prototypes through email or in such recordable media as CD or USB drive, or providing technical instruction or training through seminars or phone calls, to foreigners staying in Japan for less than six (6) months without being employed by a Japanese university, obtaining a license is required as these are deemed to be transfers of technologies to non-residents. (List-control⁸⁸)

Even transfer of technology other than list-controlled technologies requires a license if the organization from which the international students and postgraduates mentioned above graduated appears in the foreign end-user list (see page 23), and it is unknown whether the technology is not used for the development of WMD or the technology provided by the university or research institute has the risk of being used for such development. (Catch-all control⁸⁹)

Note: This does not mean that instruction/education for such students and postgraduates is forbidden. It does not legally matter if the instruction/education is provided upon obtaining a relevant license.

Required

A license is necessary in the following case: controlled technology is transferred to a specific-category person despite being an international student or postgraduate (no employment relationship) living in Japan for six or more months, a foreign staff member employed by a university, or a Japanese student or staff member.

If technical information is transferred as mentioned above to a student, postgraduate, or staff member (not limited to Japanese) who is a resident and falls in a specific category (see page 33) , a license is necessary, because the technological transfer is regarded as that to a non-resident.

⁸⁸ See page 9.

⁸⁹ See page 15.

In such a case, care must be taken that it may take certain time to provide information even if it is necessary for conducting research as study or work, or certain restrictions may be necessary for the technological transfer⁹⁰.

Practically, it is essential to (i) check the student, postgraduate, or staff member for specific category upon admission or employment to acquire a license beforehand⁹¹ or to (ii) get a license every time the technology is given to each of them.

Note: This does not mean that instruction/education for international students and postgraduates is forbidden. It does not legally matter if the instruction/education is provided upon obtaining a relevant license.

Required

With regard to international students or postgraduates, or staff members employed by a university (except specific-category persons) who live in Japan for six or more months, a license is required on condition that it is known that they will provide the controlled technologies in a foreign nation or transfer them to a specific-category person, that the technical documents (incl. records in USB drive, etc.) will be carried over to a foreign country (incl. temporary homecomings on leave), or that the controlled technologies will be transferred through skill training programs⁹².

Even if the international students/postgraduates/staff members are not non-residents or specific-category persons, a license is required to transfer the technologies if it is known that the controlled technologies will be transferred in a foreign nation or to a domestic specific-category person⁹³; the technical documents will be carried outside Japan; or the controlled technologies are transferred through skill training programs.

Practically, when making an application of permission, (i) the provider (staff member or researcher) needs to concretely describe the re-transfer of technologies by the international student or postgraduate and then the university needs to obtain a license; or (ii) the students or postgraduates themselves have to obtain a license prior to actual re-transfer or carry-out.

In addition, even if the international students/postgraduates/staff are not non-residents or specific-category persons, keep in mind that: (i) obtaining a license as a resident is required if he/she re-transfers the controlled technologies as a resident; and (ii) it is necessary to determine whether permission is required depending on the residency of the foreign organization rather than the individual researchers (residents) if they stay in Japan with their names registered in the foreign university or research institute and the Japanese university transfers such technologies as part of joint research with the foreign organization.

Note: This does not mean that instruction/education for such students and postgraduates is forbidden. It does not legally matter if the instruction/education is provided upon obtaining a relevant license.

⁹⁰ Regarding the possibility of certain restrictions given to such technological transfer, trouble may be avoidable if a good description of the system's objectives is provided before acceptance or employment. The website of METI presents materials able to be used for giving such a description to the staff, postgraduates, and students. <https://www.meti.go.jp/policy/anpo/anpo07.html>

⁹¹ For the pre-screening sheet for acceptance, see pages 110 to 116.

⁹² If transfer of the controlled technologies in other countries or to specific-category persons in Japan is set as a primary purpose or considered from the time of transfer, such transfer is subject to the Control. Meanwhile, if the transferer has no intention to conduct a foreign transaction, including a case wherein the data happens to be sent via email to the counterpart of a joint study between research institutions both in Japan during his/her overseas trip, that transfer shall not be subject to the Control.

⁹³ Regarding re-transfer to specific-category persons, the following case is expected: when a university or research institute gives technology to a resident (a staff member, student, or postgraduate), a contract is made to show clearly that the technology is re-transferred and the receiver is a specific-category person.

Contact the Security Export Licensing Division (+81-3-3501-2801) for specific license applications or for prior consultation by METI on the process for applications.

2) Control for Entry/Interim/Exit Stage

The control by FEFTA is structured for different license applications for different transfer cases as described in the preceding section 1). However, it is not practical to individually control potential transfer of the controlled technologies by the international students/postgraduates/staff every day or inspecting their belongings prior to their departure only for compliance with the Act.

For this reason, the following procedures are practically recommended in light of comprehensively and preventively avoid risks of violating the Act for each scenario. Recommended herein is to appropriately manage verification of security concerns including learning/transfer of the controlled technologies, as well as raising awareness or getting pledge certificates, which should be conducted at respective stages. The stages include when international students or postgraduates are accepted, when foreigners or Japanese staff are hired, during their tenure, and when they graduate or resign. Moreover, it is expected that good stage-by-stage control replaces daily and individual control.

At that time, it is important that each academic and research institution should know in advance of which technologies and goods are subject to the control by FEFTA and in which research department or division they are dealt with, for proper management of the international students/postgraduates/staff within such department or division in particular.

Note that the management of specific-category persons based on the specific-category approach, which will start to apply on May 1, 2022, is recommended to control international students as well as foreign postgraduates and staff.

(In accepting/hiring international students/postgraduates/staff⁹⁴)

Recommended

In accepting/hiring international students or foreign postgraduates/staff, it is recommended to check presence of security concerns using the "Pre-screening Sheet for Accepting Foreigners (International Students/Postgraduates/Staff/Visitors)" (p. 110) together with the Foreign End User List and "Apparent" Guideline, and then determine if they should be finally accepted/hired to the institution upon considering modification of the technologies to transfer or filing a license application to METI.

Promotion of Japan's globalization is the fundamental of the country, which is expected to continually accelerate under proper control. In accepting/hiring international students/postgraduates/staff and if the controlled technologies could be transferred to them afterwards, it is not practical to individually control the potential transfer of such technologies or filing application for individual licenses. Thus, it is recommended to set up procedures to verify potential security risks and to determine if they should be finally accepted/hired⁹⁵. (Note: See p. 33 for the verification using the Pre-screening Sheet.)

Disputes may arise between the institution and the international students/postgraduates/staff, if it turns out after accepting/hiring them that the institution is unable to transfer the technologies. Thus, many institutions are verifying such information as research agenda and purposes, and national or organizational origins in accepting/hiring them to judge presence of any concerns.

⁹⁴ Includes a case wherein they are assigned to such a project as a joint research with an enterprise.

⁹⁵ For checks with the pre-screening sheets, see page 44.

To know the presence of concerns upon acceptance or employment, it is recommended to check whether or not: the organizational origins of the international students/postgraduates/staff is listed in the Foreign End User List (see p. 23); information about the concerns is published on the website of such origins; or the technologies to be transferred by the academic or research institution might be diverted for use in development, etc., of WMD or other weapons, is necessary. In addition, checking the "CHASER Data for Universities"⁹⁶, which is published by the Center for Information of Security Trade Control (CISTEC), is effective as well.

Even if international students/postgraduates/staff temporarily belong to a risky organization⁹⁷, it is recommended to check that the research work has no concerns in light of the "Apparent Guideline". Particularly, when they receive financial support from foreign governments or work as members of foreign organizations, care must be taken in terms of the university's risk management, because they are expected to have duties or missions given by the government or organization or to return to their countries certainly in the future. For the review, see "VIII. Example Q&A (with University-related Persons)" (see page 93) as well.

Contact the Security Export Administration Division (+81-3-3501-2800) for prior consultation by METI on this process. For acceptance of international students, etc., explanation as to such matter as whether or not the acceptance screening is conducted using the Pre-screening Sheet or Screening Form may be requested for the review of the status of residence by immigration authorities, after the university grants admission.

The Police White Paper (2021 Edition) makes pointed reference to specific countries claiming, "Even in Japan, ...not only conducting different intelligence activities using sophisticated and diversified means, including dispatching researchers, engineers or students to enterprises holding advanced technologies, defense-related companies or research institutions..."

(During a tenure of international students/postgraduates/staff members)

Recommended

An incident that the international students/postgraduates/staff in your organization turn to be persons from a listed organization due to revisions of such documents as the Foreign End User List could happen. Periodically reviewing the past screening results is important.

Since the Foreign End User List gets revised at least once a year, you must get the latest edition. If the organization of your international students/postgraduates/staff gets listed in such documents, that alone will not constitute a legal violation. However, be sure to carefully examine the transfers of technologies to follow such listing, and if required, obtain a license according to the relevant regulations before actually transferring them.

⁹⁶ See footnote in page 48.

⁹⁷ This assumes that the material relationship with the organization of concern is tenuous. For example, possible cases include: "an engineer belonging to a company of no concern participated in a weekly professional seminar held by a university of concern as an auditing student" or "such engineer has been dispatched to a research department of a university of concern for a month as part of a global, inter-university exchange program."

Required

When a postgraduate, international student, or staff member in an organization issues a report or notice related to specific-category classification, it is necessary to review the technology to be transferred and to obtain a license based on FEFTA.

There are some cases where postgraduates, international students, or staff members make a report of side jobs based on the work rules and disclose their specific categories or METI informs of their categories. In such a case, it is essential to review the technology to be transferred and to obtain a license based on FEFTA.

Recommended

Your international students/postgraduates/staff may become residents (fall in non-specific categories) and acquire the controlled technologies during their tenure. If such persons temporarily return to their home countries and transfer such technologies therein, they are required to obtain a license pursuant to FEFTA. Accordingly, you may check advancement or changes of the research subjects, and when concerns in light of FEFTA cannot be eliminated, re-examine the technologies to transfer or address the concerns through reassignments/relocations.

Even if the international students/postgraduates/staff become residents (fall in non-specific categories), transferring the technologies in foreign countries or to non-residents or specific-category persons, or carrying them overseas, is to be controlled pursuant to FEFTA (see p. 74). For this reason, it is recommended to confirm the level of concerns again, including possible re-transfer of the technologies in foreign countries by resident international students/postgraduates/staff during their temporary homecomings, in transferring the List-controlled technologies to them. Moreover, if such changes as advancement or re-direction of the international students'/postgraduates'/staff's research agenda can be expected in the interim stage of their tenure, it is recommended to get confirmed once again whether or not the agenda technologies are subject to the List Control, using check sheets.

If the concerns in light of FEFTA held by the academic or research institutions cannot be eliminated, you may re-examine the technologies to transfer or respond by not assigning/locating these persons to an associated organization or department.

(When the international students/postgraduates/staff graduate/leave)

Recommended

When the international students/postgraduates/staff graduate/leave, it is recommended to call for their attention to reconfirm that no controlled technologies/goods are transferred/carried upon their homecomings and obtain the pledge certificates in the same fashion as on admission/employment. For efficient and effective attention calls to avoid outflows of the controlled technologies when the international students/postgraduates return home, it is recommended to also check whether or not any controlled technologies might be transferred within the research agenda of such students who become residents.

Even if the international students/postgraduates/staff members are residents, transferring the technologies in foreign countries or to non-residents or specific-category persons, or carrying them overseas is controlled pursuant to FEFTA. Thus, it is recommended to thoroughly check whether they bring out the controlled goods or technologies given by the university upon graduation or resignation.

For this, it is effective to let the international students/postgraduates/staff members, the persons concerned, recognize the importance at appropriate times, for example, upon admission or employment, by informing them of following proper procedures based on FEFTA as necessary when technological information about research received from the universities is transferred to others, and of the necessity and awareness of obtaining a pledge certificate to the effect that the use of such information is limited to civilian applications (see page 125). In addition, it is recommended to check whether to bring out controlled goods or technologies, or provide them in foreign countries upon graduation or resignation, to re-obtain a pledge certificate (see page 126) in the same fashion as on admission or employment, and to call their attention again in consideration of their career paths after graduation or resignation.

2. Overseas Trips and Temporary Homecomings

Required

When your international students/postgraduates/staff travel overseas and if they plan to transfer controlled technologies in other nations, obtaining license is required at least prior to carrying them over, indifferent to their resident/non-residency status.

Unless the license pursuant to Paragraph 1, Article 25 of FEFTA is obtained because it is known that your international students/postgraduates/staff will or potentially may transfer controlled technologies in foreign countries, a license pursuant to Paragraph 3 of the said Article is required when the controlled technologies are : (i) carried over to the country in some tangible form of records (e.g., USB drive or documents); or (ii) transmitted in any telecommunications format (Internet, phones).

Even after such technologies have been carried over to a foreign country with a license obtained pursuant to Paragraph 3 of the said Article, another license pursuant to Paragraph 1 of the said Article is required prior to actual transfer. For this reason, obtaining the license pursuant to Paragraph 1 of the said Article from the beginning is effective to actually transfer such technologies.

Even in the case of not making a trip, care must be taken that it is necessary to acquire a license based on Paragraph 1 of the same article in the same fashion as on passage when they participate online in a closed lecture or meeting held by a foreign university or research institute to transfer the controlled technology.

Required

Carrying samples or research materials/equipment over to a foreign country also may be subject to the control depending on the specification of the materials/equipment used therein. In this case, obtain a license even if such items are ensured to return to Japan.

Shipping goods from Japan to other countries is deemed to be "export" pursuant to FEFTA. Accordingly, in addition to carrying equipment packed in a suitcase, etc., over to a foreign country, carrying it over to a foreign country on the premise of bringing it back is also included as "export."

On the other hand, "goods" include hand-made prototypes, samples, baggage, products sold domestically, materials/equipment to be provided as legacy/used/free, as well as used for measurements in the destination and then returned to Japan. Accordingly, verifying whether or not these items are subject to the List or Catch-all Control or to the exemptions (see p. 54) is required. Most of commercially available laptops or mobile phones, except a few, are not subject to the List Control, however.

Recommended

For USB drives or PCs storing the controlled technologies data, it is recommended to encrypt and/or password the files and to send required report/message or record the factual situation if they should be lost or stolen.

In carrying such data in a USB drive or PC, it is recommended to encrypt and/or password the files in case it should be lost or stolen. In case the data you have is lost or stolen, it is recommended to organize and record the factual situation in addition to reporting to your organization and informing authorities concerned.

According to FEFTA, these cases will not be deemed as violation unless there was an intent or purpose to transfer such controlled technologies in a foreign country then. However, transferring controlled technologies in a foreign country pretending that the USB drive or PC was lost or stolen is deemed as violation.

3. Conducting Joint R&D

Required

In conducting joint research projects with academic or research institutions from foreign countries, carefully check whether or not: (i) controlled technologies are not included in the technologies to transfer; (ii) the end-users are listed in the Foreign End User List; and (iii) such technologies could be used for development, etc., of WMD or conventional weapons.

If controlled technologies are included in the technologies to transfer in the joint research projects, the license of the Minister of Economy, Trade and Industry is required. Though transfer may only include technologies in the public domain in earlier stages of the joint research projects, some new technologies could arise as the projects move forward. If this is the case, you have to conduct the Classification of such new technologies, and if a List-controlled technology is included, the said license is also required.

Even if such technologies do not include a List-controlled technology, the license of the Minister of Economy, Trade and Industry is required when they "could be used for development, etc., of WMD" or "could be used for development, etc., of conventional weapons" (see p. 15).

Since many of academic-industrial joint research projects have been developing a product as their objective, keep in mind that "research activities in the field of basic sciences" may not be applicable, and remember to control and clarify ownership of the technical information withheld from public knowledge (technology information not in the public domain) (see p. 56).

If these aspects remain unclear, it is still required to make a proper judgment by asking your counterpart to submit additional information or its pledge certificate, referencing the check items in such materials as "End-use" check sheet and "End-user" check sheet.

Required

In conducting joint research projects, be sure to take measures to prevent unintentional legal violations by: (i) executing an agreement or obtain a pledge certificate that forbids the other party to re-transfer the technologies usable in development, etc., of WMD or conventional weapons to a third party without authorization; (ii) suspending subsequent transactions as non-performance if such agreement or pledge is breached; (iii) not transferring technologies that require an administrative license until the license is obtained; and (iv) reporting any suspicious case of violation of FEFTA to authorities concerned.

If the technologies to be transferred are listed in the middle fields of Categories 2 through 4 or 15 in the Appended Table of the FEO, or, if the technologies listed in Categories 5 through 14 therein are to be transferred to Countries Under UNSC Arms Embargo, the license application may require a pledge certificate upon filing.

In recent years, procurement activities of the countries of concern and terrorists for stealing sensitive technologies are becoming sophisticated. Responding to such activities with great care prior to conducting joint research projects is required to avoid unintentionally getting involved in such malicious activities.

4. Visits of Foreign Researchers

Required

If an academic or research institution in Japan accepts a visit by researchers from overseas and explains controlled technologies in the opinion exchange held through facility tours or in laboratories, a license is required.

The exemptions cannot be applied unless the technology information is available or audible to the general public. Because of this, setting up a special facility tour limited to specific visitors instead of the general public, a close, prior review of the tour courses and descriptions and examining the potential involvement of the List-controlled technologies therein is required.

Recommended

For preventing transfer of controlled technologies without a license, it could be a good idea to prepare the facility tour courses intended for public view of outsiders or to set such a rule as restricting the information to be provided to the non-subject including published articles and providing the information after obtaining a license if necessary.

Recommended

If a controlled technology is transferred through visits of foreign researchers, it is recommended to check required items using the "Pre-screening Sheet for Accepting Foreigners (International Students, Researchers, Teachers, Visitors)" (p. 110).

5. Closed Conference

Required

For seminars, lectures or exhibitions, it is required to examine the necessity of prior licensing, including checking (i) whether or not the information presented is subject to the List Control, Catch-all Control or the license exemptions; and (ii) the countries/regions of the institutions the attendants belong to, the elapsed time after arrival at Japan, and the classification of specific categories.

The exemptions cannot be applied unless the technology information is available or audible to the general public. If it is a private event, a closer review of the content of the lecture is required.

The attendants are checked for specific category as ones not at command and order. Accordingly, as mentioned in page 36, they can be regarded as falling in non-specific categories in principle, provided that a document (e.g. written application for participation), which is acquired generally when their participation in seminars/lectures/exhibitions is allowed, does not show clearly that they fall in specific categories.

Recommended

If a controlled technology is transferred in a private lecture, it is recommended to check required items using the "Pre-screening Sheet for Transfer/Export of Technologies/Goods" (see page 107) and "Screening Form" (see page 117).

Recommended

For preventing transfer of controlled technologies without a license, it could be a good idea to prepare descriptive materials or samples based on the technologies in the public domain, or email templates and external Q&A manuals, otherwise.

6. Use of Equipment

Required

When allowing remote, international access to a supercomputer installed in Japan or letting non-residents or specific-category persons in Japan use it, obtaining a license is required if the computer program to be used or the operation manual contains a controlled technology.

When allowing remote access from overseas to a supercomputer installed in Japan and listed in Item 8 of the Appended Table 1 of the ETCO or in Item 3(c), Article 7 of the MOSGT, or, letting non-residents or specific-category persons in Japan use it, obtaining a license is required if the computer program to be used or the operation manual contains a controlled technology.

However, the restrictions over supercomputers have been eased since the January 2017 revision of the relevant cabinet/ministerial orders. A case judged that the operation manuals were subject to the List Control in the past could be non-subject pursuant to the latest cabinet/ministerial orders. It is recommended to check such cases this time again. If such technologies are not subject to the List Control but to the Catch-all Control, obtaining a license is required. For example, if the computer program for use of the supercomputer (the operating system) is not subject to the List Control but is being used by a non-resident, be sure to carefully check in light of the Catch-all Control.

Recommended

Instruction to the extent of how to use equipment or devices to be used by international students, etc., for the research in the laboratories, is generally deemed not to be a transfer of the List-controlled technologies. Verification of the content and conducting the Classification in advance should allow more efficient control procedures.

Most of the controlled technologies target "technologies required" for design/manufacture/use. The "technologies required" basically mean those required for reaching or exceeding the performance level or characteristics specified in the control. Therefore, most of the operation procedures for equipment or devices used in university laboratories are deemed to have operating technologies equivalent to those of out-of-scope goods (e.g., limited to technologies for operation according to disclosed manuals), so the instruction to the extent of how to use equipment or devices necessary for international students for research is generally deemed not to be "technologies required".

However, keep in mind that there are also items broadly controlled, including technologies for using dedicated nuclear power items.

Paragraph 4, Article 55-10 of FEFTA stipulates the obligations of exporters to properly conduct export of goods and transfer of technologies pursuant to the compliance standards.

Meanwhile, the Minister of Economy, Trade and Industry may give an instruction or advice pursuant to the compliance standards and give a recommendation/ordinance in case of violations. Violations are subject to penalties.

Required

All those who export or transfer are required to observe obligations to: (i) assign a person in charge of verifying subject/non-subject to the List Control; and (ii) implement necessary instructions for compliance.

All those who export or transfer are required to observe the following (i) and (ii):

- (i) assign a person in charge of verifying whether or not goods and others to be exported or otherwise are subject to the List Control; and,
- (ii) for persons involved in such operations as exporting, ensure awareness of the latest regulations and offer necessary instructions for compliance with provisions of such and other related regulations.

Required

Exporters or transferrers who deal with the security-sensitive "specified important goods, etc." (List-controlled goods, etc.) are required to observe obligations to: (iii) assign the representative of the organization to the person in charge; (iv) establish the export control structure; (v) specify the Classification procedures; (vi) specify check procedures for end-use/end-user and abide thereby; and (vii) verify identification of the goods with goods already classified, at actual shipment.

Exporters or transferrers who deal with the security-sensitive "specified important goods, etc." (List-controlled goods, etc.) are required to observe the following (iii) through (xi) in addition to (i) and (ii) above:

<Establishing the structure>

- (iii) assign the representative of the organization to the person in charge;
- (iv) establish the internal export control structure (job allocation/responsibilities);

<Establishing the procedures>

- (v) specify procedures for the Classification;
- (vi) before export, specify procedures for checking the end-uses and end-users, and make checks according to them. If obtaining the information necessary to the verification from other than the end-users, define procedures for improving the reliability and make checks according to them;
- (vii) ensure identification of the goods with goods already classified, at actual shipment;

<Maintenance>

- (viii) establish the export control audit procedures and make efforts for implementation thereof;
- (ix) make efforts to give training for the export control supervisors and those involved therein;

⁹⁸ As the "Guidelines for Establishing/Operating Voluntary Control Structure for Security Export Control" published by the Japan Society for Intellectual Production (an NPO) describes the practices for establishing/operating the export control structure through the eyes of an academic/research institution, cross-referencing this guideline should work better.

- (x) make efforts to instruct the subsidiaries if they are involved in exporting activities;
- (xi) make efforts to retain documents related to exports for an appropriate period; and
- (xii) When violating or potentially violating the regulations, promptly so notify the Minister of Economy, Trade and Industry and take necessary measures to prevent recurrence

Note: Only (xii) is applied to persons who exports only items subject to the license exemptions.

The Ministerial Ordinance for Defining Compliance Requirements for Exporters was amended in November 2021 and Items (vi) and (x) were added (the enforcement date is May 1, 2022).

In Item (vi), “obtaining the information necessary to the verification from other than the end-users” means that the information necessary to good checks on end-uses and technology users or end-users of goods is acquired indirectly from companies (e.g. those who introduce export agencies and end-users) related to the export in question.

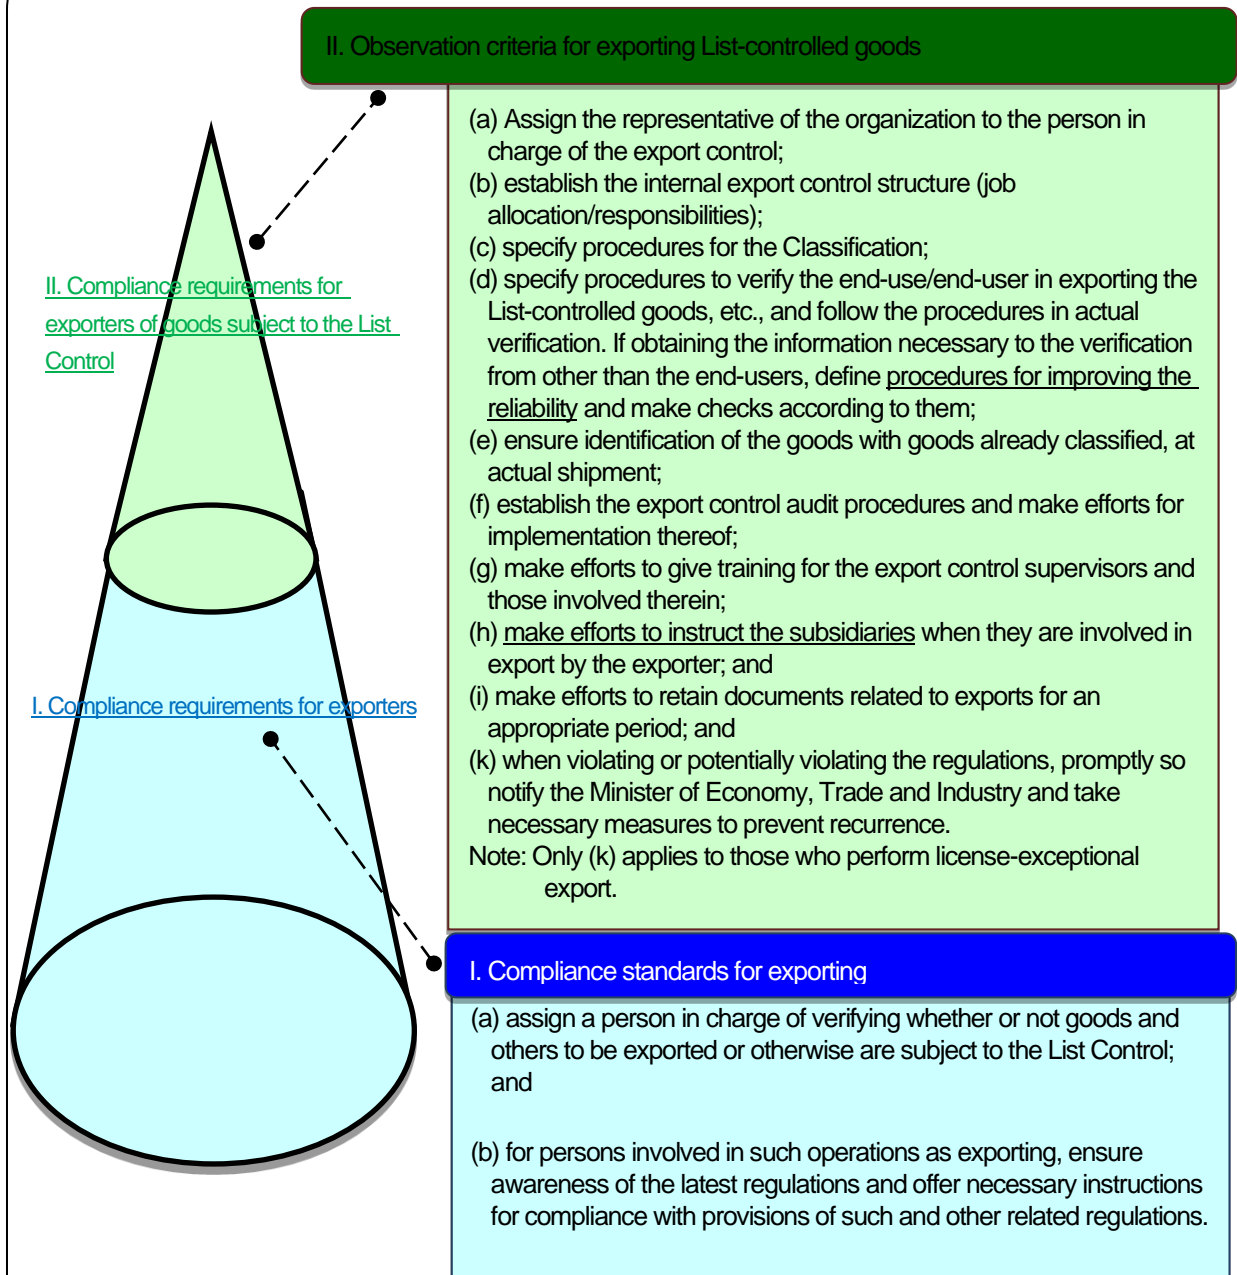

To put “procedures for improving the reliability” concretely, they include checking disclosed information regularly (e.g. once every year), checking information from third parties irrelevant to export regularly, and hearing given to end-users if there is a visiting opportunity. Moreover, the trading contract may have the following provision: the contract can be cancelled unconditionally or a claim for damage may be made if serious violations are found, such as diversion to military uses and unauthorized selling, or if fake information is provided. It is desirable to take the actions listed above in consideration of the amount, nature, and destination of list-controlled goods rather than to require the uniform export actions for such goods.

In Item (x), “instruct the subsidiaries” includes guidance for knowing and observing the latest and related laws (including corrective measures against defects), training for obtaining knowledge and skills necessary for proper work including export, checking the rules the subsidiaries have, and inspecting the results of an audit of internal activities or of an audit conducted by the subsidiaries. The subsidiaries to be instructed in Item (x) include those specified in Paragraph 3, Article 2 of the Companies Act and involved in management activities for exporting list-controlled goods that exporters conduct. If the subsidiaries, for example, make a prior examination or verification to check end-use for exports, they are within the scope because they are involved in exporting activities. On the other hand, if the subsidiaries conduct no exporter’s management activities, they are not subject to instructions⁹⁹.

The security trade control website provides the “Checklist for Self-Evaluation of Security and Export Control for Universities (Outline/Detailed Edition)”¹⁰⁰. The objective of this checklist is to make improvements by arbitrarily checking the university’s security and export control system for maintenance and operation status. Use it together.

⁹⁹ For example, a venture that receives an investment from a university is not subject to instructions if the subsidiary exports goods as its own business without being involved in the university’s export management work.

¹⁰⁰ <https://www.meti.go.jp/policy/anpo/daigaku.html>

Note: the Minister of Economy, Trade and Industry may give an instruction or advice pursuant to the standards and give a recommendation/ordinance in case of violations. (Violations are subject to penalties.)

1. Prior Review

1) Grasp of Present Status

Recommended

It is recommended to know of the List-controlled technologies and goods as well as their whereabouts in advance to be able to appropriately manage the technologies and goods that are held within the organization. (Recap)

It is recommended that each academic and research institution should know in advance of which technologies and goods are subject to control by FEFTA and in which research department or division they are dealt with, in order to appropriately manage the transfer of technologies and export of goods by such department or division in particular. In establishing the organizational structure, in particular, different efforts are required by the compliance standards depending on whether or not the transferrer/exporter of technologies/goods deals with List-controlled technologies/goods. It is therefore recommended to grasp whether or not the technologies/goods owned are subject to the List Control in advance.

Recommended

In order to be able to locate sensitive technologies, conducting a survey for teaching and research staff and requesting submission of their answer sheets is a beneficial ways.

In transferring controlled technologies, knowing that a license of the Minister of Economy, Trade and Industry is required and grasping the outline of "what has to be controlled" and "which technologies are subject to the control" should minimize the time/labor spent on conducting Classification and obtaining the license as well as the risk of getting accused of legal violations.

Specific survey items may be, for example, whether or not (i) List-controlled technologies are being dealt with; (ii) goods listed in "The Commodity Watch List for WMD Catch-All" and "The Commodity Watch List for Conventional Weapon Catch-All" (Item 24 of the Export Precautions No. 24, see pages 17 through 22) or technologies for design/manufacture/use of such goods are possessed; or (iii) international students/postgraduates from institutions listed in the Foreign End User List.

Recommended

Confirm in advance whether or not the grasped technology information is subject to control by FEFTA and if it is, provide a relevant marking to expressly show that.

Immediate verification of whether or not a license is required can be expected by getting such information marked. Items to be marked include information recorded in paper, digital file or computer program format.

<Marking examples>

It is common in confidential document or security control to mark materials by classifying them into three or four categories such as Top Secret, Confidential and Internal Use Only.

In a common classification, while Top Secret is for such information as sensitive and not meant to be externally provided by the organization, Confidential means such information as not allowed to be externally provided without following specified internal procedures.

It could be a good practice to use the similar marking to the controlled technologies, including those subject to control by FEFTA, and yet, additional marking as below should be useful that describes why they have been so marked, if an opportunity to transfer them is expected.

Such marking as FEFTA-con 1 (abbreviation of the Act + control + item number) or T-con 3 (technology + control + item number) in addition to Confidential should be helpful when they are to be externally provided. Using the corresponding numbers of items in the Appended Table of the FEO for these numbers "1" and "3" above should be also helpful. These are just examples and you can use your own marks. What is important is that the marking is easy to understand for anyone in your organization.

If the technologies that your organization holds cannot be distinctively determined to be subject to FEFTA or not, you should put a tentative mark on them as "gray" and conduct secure determination if a necessity to actually provide it arises. (Do not hesitate to contact METI if any aspect is found to be questionable.)

For example, FEFTA-con: (temp.) or T-con: (temp.).

2) Understanding by Executives

Recommended.....

Academic and research institutions that deal with the List-controlled technologies/goods are required to assign the representative of the organization to the person in charge of the export control (see p. 79).

To establish the organizational control structure, it is important that Chief Officer of the academic or research institutions as well as other senior staff (President or Chairperson) understands the significance and then the whole such institution works under their leadership.

Even such institutions that do not deal with the List-controlled technologies/goods should assign a person responsible for verifying whether or not any technologies/goods are subject to the List Control and establish the structure required for compliance with provisions of related regulations. In doing so, it is important that the leader of the organization as well as other senior staff understand the significance and then the whole such institution works under their leadership. Security export control is an obligation stipulated by laws and regulations and breaching the obligation is subject to charges and penalties on the academic or research institutions as well as the senior staff including the leader of the organization. It is therefore important that the senior staff understand that this is an essential initiative in promoting further globalization in such institutions as well.

3) Assigning Responsible Department/Personnel

Recommended

Once getting the significance of the security export control understood, it is critical to assign responsible department(s) and personnel in order to move forward to establish the organizational structure across the academic or research institution.

There are such departments as General Affairs, Legal, Intellectual Property Management and Research Divisions within such institutions. It is important that the department/personnel grasps technologies and goods held by the academic or research institution, and that availability of smooth consultation/collaboration with teaching staff, senior staff and relevant departments should be taken into consideration, in appointing the responsible department(s) and personnel.

Recommended

Another option is to explain the initiative across the board members and department directors and form a consensus on working to establish the organizational structure under the senior staff leadership, or, to follow the existing meeting system such as the executive board or faculty council.

In order to move forward to establish the security export control structure incorporating the circumstances of academic or research institutions, it is essential to establish a structure on which the verification is made organizationally instead of leaving it up to individual staff or researchers. Accordingly, it is important that the senior staff of such institutions who are Chief Officers should work as the flag persons to realize the goal, and that they make efforts to form a consensus of the executive board or faculty council for increased awareness in the institution and the whole organization works as a team.

2. Establishing Organizational Structure

1) Organizational Structure Planning

Required

The department and person responsible for the export control have to be assigned.

Based on the compliance standards, a person responsible for the Classification (hereinafter, "Classification Supervisor") has to be assigned. Classification Supervisor has to be responsible for Classification in his/her organization as well as supervision for proper Classification¹⁰¹.

No specific qualification is imposed for Classification Supervisor. Either an expert in technologies (e.g., head of IP management or research department) or on laws and regulations (e.g., head of general affairs or legal department), and more than one person, can be appointed¹⁰².

In addition, if your institution deals with controlled goods/technologies, appointing a person in charge of operations of export/transfer of technologies ("Responsible Officer for Export Control") and defining authorities and responsibilities in the organization as well as inter-divisional relationships are required. Note that the representative of the organization,

¹⁰¹ Some organizational decisions may be made in the executive board or regular committee meetings.

¹⁰² Employing an export control advisor could be a good practice to support the structural operations including Classification and Transaction Screening. Cases are reported that some universities even use Research Administrator (URA).

such as the university president or chief director, shall be appointed to ROEC¹⁰³ specified in the compliance requirements.

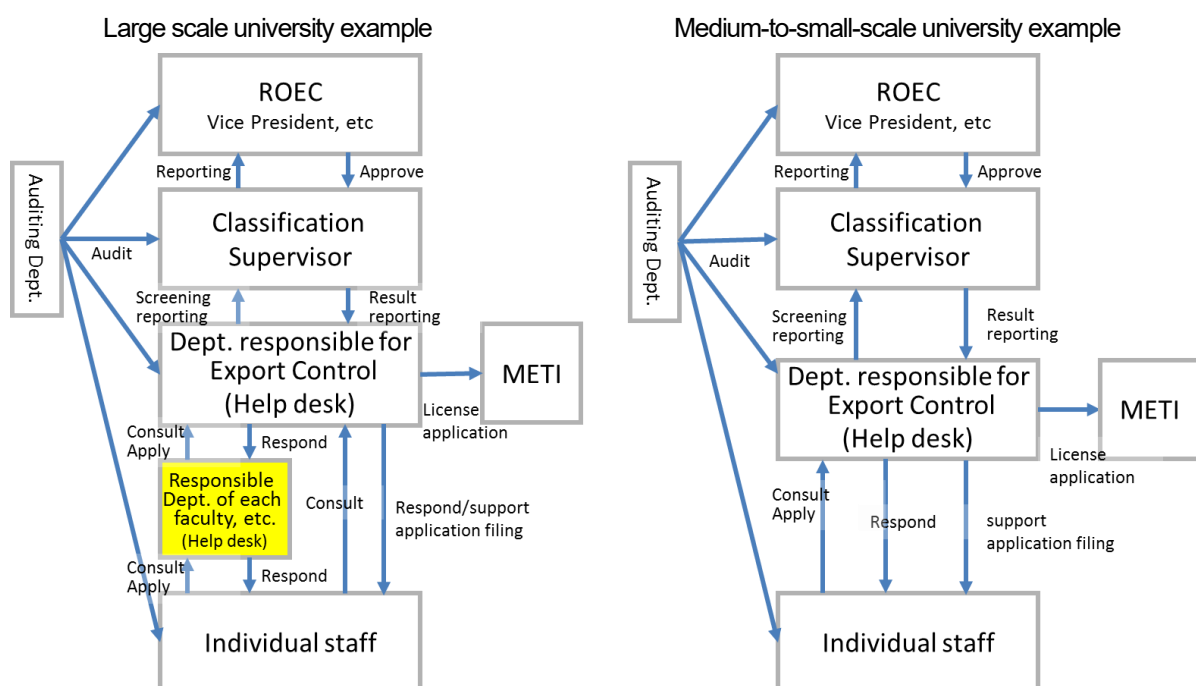

Recommended

It is also important to set up a help desk for consultation on the security export control.

As part of the structure establishment, it is important to set up an export control help desk for consultation, including whether or not Classification or license application is required, so each staff can ask for help on questions about the research activities as well. This should lead to reducing the burden on each researcher, and efficient processing of the procedures even when asking for help from METI, facing a tough decision, can be expected.

<Example cases for the export control structure of universities>

In the Guidelines for Establishing/Operating Voluntary Control Structure for Security Export Control published by the Japan Society for Intellectual Production, example export control structures in universities are introduced. They include (i) a structure for a large-scale university that enables consultation by the export control division for the responsible team of each faculty by setting up a help desk in each faculty; and (ii) another structure for a medium-to-small-scale university that enables centralized consultation by the export control division by setting up the help desk only in that division.

Note: Examples developed based on "Guidelines for Establishing/Operating Voluntary Control Structure for Security Export Control" by the Japan Society for Intellectual Production

¹⁰³ The responsible officer for export control is defined in Item 2(a), Article 1 of the Ministerial Ordinance for Defining Compliance Requirements for Exporters, while ICP (see page 97) calls the responsible officer "Chief Export Control Officer" (CECO) and the administrator for actual export control "Responsible Officer for Export Control" (ROEC). Accordingly, care must be taken not to confuse the latter with the former specified in the ministerial ordinance.

2) Establishing the procedures

Required

It is important that each academic/research institution works toward establishing the detailed structure of the voluntary control with which clear-cut responsibilities/roles in the organization as well as rules for the control are defined, considering each institution's own circumstances.

Based on the compliance standards, defining authorities and responsibilities in the organization as well as inter-divisional relationships are required. While this Guidance refers to generic aspects or common cases, actual and detailed circumstances of each institution such as technological properties, relationship with industrial societies, the number of staff/researchers, and understanding of the security export control are infinite in variety. Thus, establishing the organizational structure adaptable to the circumstances of each academic or research institution is important. Contact the Security Export Administration Division (+81-3-3501-2800) for prior consultation by METI on this process in this aspect.

Recommended

To support the voluntary control incorporating the compliance standards, METI strongly recommends that transferrers of technologies or exporters themselves should develop the Internal Compliance Programs (hereinafter, "ICP"), with which the transfer/export of technologies/goods is conducted in accordance.

ICP is an effective tool to avoid different risks in transferring technologies. After the 1987 release of the "Directive on the Compliance with Export Control Laws" (62EXP-3605, September 7, 1987) by the then MITI Minister, we have been asking mainly export-related enterprises to develop and register their ICPs.

The compliance requirements including FEFTA set forth by ICP are of the same effect as those described in the compliance standards. The relationship between these two is: while the compliance standards set forth a minimum required set of compliance aspects, the compliance requirements including FEFTA set forth by ICP are for achieving such aspects to higher degrees.

Thus, developing ICP pursuant to the compliance requirements including FEFTA and performing proper control accordingly should basically allow the requirements listed in the compliance standards to be securely executed.

In instituting ICP, an example is to set forth the following. Yet, an ICP that is viable and realistic has to be instituted, taking reality of the scale, organization and job allotment of each academic/research institution into account (see pp. 97 and 102)

(Example of items to be defined in ICP)

- (i) Purpose, Definition of Terms, Scope of Application, Basic Policy;
- (ii) Chief Export Control Officer, Responsible Officer for Export Control, Export Control Officer(s), Export Control Committee
- (iii) Pre-screening, Classification, End-use Verification, End-user Verification, Transaction Screening, License Application, Transfer Control of the Technologies, Shipment Control of the Goods; and,
- (iv) Audits, Education, Documents Control/Retention of the Recordable Media, Reporting, Disciplinary Actions, etc.

Ensure full control by continuing to consider improving the internal structure, ICP or detailed rules based on a collection of the latest information and audits, even after the institution of ICP.

Note that the security trade control website presents the “Model Security Trade Control Manual for Universities and Research Institutes”¹⁰⁴ as a reference for understanding the purposes of the ICP provisions and relevant documents as well as for making the internal rules robust. Use the manual together.

¹⁰⁴ <https://www.meti.go.jp/policy/anpo/daigaku.html>

3. Preparing for Operating the Structure

1) Communication and Ensured Organizational Awareness by Executives

Recommended

It will be quite effective if the senior staff including the head of the organization show their effort to take the initiative in communicating with the staff at a briefing or faculty meeting the importance of driving healthy development of academic researches; while also driving the security export control to preserve the peace and security of the international community; and ensure awareness of the necessity, procedures or contact information of the security export control system.

To be able to follow the required procedures as an organization for: (i) a joint research project with a foreign academic/research institution; (ii) carrying research equipment/materials over to a foreign country; (iii) acceptance of international students/postgraduates; (iv) transferring technologies to foreign research collaborators; and (v) for overseas business trips, a big step forward will be to let every single staff fully understands the control structure and to secure an environment allowing consultation whenever needed. To achieve these, it is important that the head of the organization takes the initiative to secure awareness across the campus to necessity, procedures or contact information of the security export control system.

In securing such organization-wide awareness, implementing the following 2) Developing/providing Pamphlets and Guidebooks and 3) Integrating Control into Existing Administrative Procedures, as well as repeatedly and persistently making such efforts is important in assuring understanding by every single staff.

2) Developing/providing Pamphlets and Guidebooks

Recommended

Depending on the reality of academic and research institutions, making necessary information conveniently available, for example, developing/distributing a user-friendly pamphlet or guidebook for the staff, etc., and publishing it on the website, is recommended.

Pamphlets and briefing documents developed by METI are available to academic and research institutions to be used for briefings to the staff on the control structure and procedures¹⁰⁵. In addition, other documents tailored to the reality of each institution should be developed/distributed, while forms and documents for the control procedures should be available from each institution's website. These are recommended to make necessary information conveniently available.

The security trade control website presents the “Collection of Minor Incidents Related to Security Trade Control in Universities and Research Institutes”¹⁰⁶ which introduces examples of possible violations of laws that could occur in the export control places and of measures against them. Use the collection together. It is important for the universities and research institutes to conduct systematic activities and for the researchers to avoid the occurrence of such examples by themselves.

¹⁰⁵ If you wish to get them, please fill in and send the request for materials provided on the website. As available volume is limited, we apologize in advance that we may not afford to meet your request. https://www.meti.go.jp/policy/anpo/seminer_document.html

¹⁰⁶ <https://www.meti.go.jp/policy/anpo/daigaku.html>

<Example of the pamphlets published by METI>

3) Integrating Control into Existing Administrative Procedures

Recommended.....

To control additional clerical loads from the security export control and to prevent errors, integrating placement of check columns on papers and a step to require pledge a certificate based on the export control into existing administrative procedures (i.e., for acceptance of international students/researcher/staff, overseas business trips, execution of joint research/research collaboration agreements) is also important.

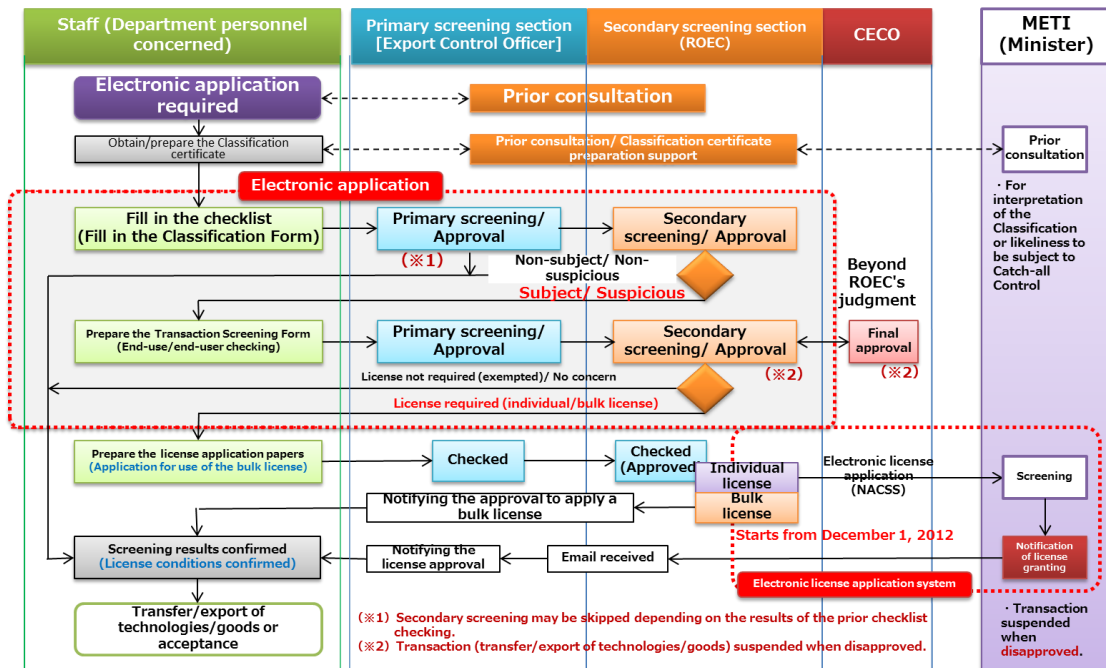

<Initiative of Tohoku University>

By integrating placement of check columns for the security export control, addition of reminders, requirement of pledge certificate into existing procedures, the university is working on the realization of an omission-free, efficient control.

Admin/Admission	Added export control check fields in the admission application form for postgraduates/graduates.
International students	<ul style="list-style-type: none"> Requiring Pledge Certificate from the students (official/unofficial). Added precautions in the internal public offering for government-assisted students.
Human Resources	<ul style="list-style-type: none"> Requiring Pledge Certificate from the alien researchers. Added export control check fields in the hiring recommendation/request forms. Added export control check fields in the subsidiary work requests.
International Exchange	<ul style="list-style-type: none"> Requiring Pledge Certificate from the visiting research fellows Added export control check fields in the acceptance records for the visiting research fellows. Added precautions in the exchange agreement execution plans.
Research Promotion	Added precautions in the internal public offering for the grants-in-aid.
Academic-industrial Alliance	For example, setting forth the export control provisions in the joint research agreements.
General Affairs and Finance	Some sections are introducing the export control check fields in the travel itineraries or EMS shipment records, etc.

<Initiative of Nagoya University>

The university has digitized the check sheets and the Classification charts, and built a system that processes procedures for application, screening and approval.

<Initiative of Ritsumeikan University>

The university has printed the "Check list for self-control" on the back of the Pre-screening Sheet, which enabled simplified procedures for overseas business trips and acceptance of international students by this creative idea to make the self-control checking easier for the teaching staff.

Operational policy for accepting international students/researchers/teachers/visitors

Research division/institution classification	Classification of the degree of concern in the technology transfer to the origin (organization/nationality)	Acceptance classification				
		i. Faculty student equivalent	ii. Graduate student equivalent (MC/DC)	iii. Researcher		iv. Temporary visit
		Faculty students, students receiving preparatory/Japanese language education, int'l exch. students, non-degree students, sp. auditing students, auditing students, etc.	Graduate students (MC/DC, special auditing students, int'l postgraduates, sp. education postgraduates, etc.	With employment	Without employment	Visitors, observers, congress attendants, etc.
Science/ Art courses (Experimental)	Acceptance from an organization in the End User List, countries of concern, or Countries Under UNSC Arms Embargo	Not required	Pre-screening Sheet + Pledge Certificate	Pre-screening Sheet + Pledge Certificate	Pre-screening Sheet + Pledge Certificate	Pre-screening Sheet
	Acceptance from others than above	High	Not required	Pre-screening Sheet + Pledge Certificate	Pre-screening Sheet + Pledge Certificate	Pre-screening Sheet
		Low	Not required	Not required	Not required	Not required
Art/ Social Science courses (Non-experimental)		Not required	Not required	Not required	Not required	Not required

4) Communication between Control Personnel and Staff

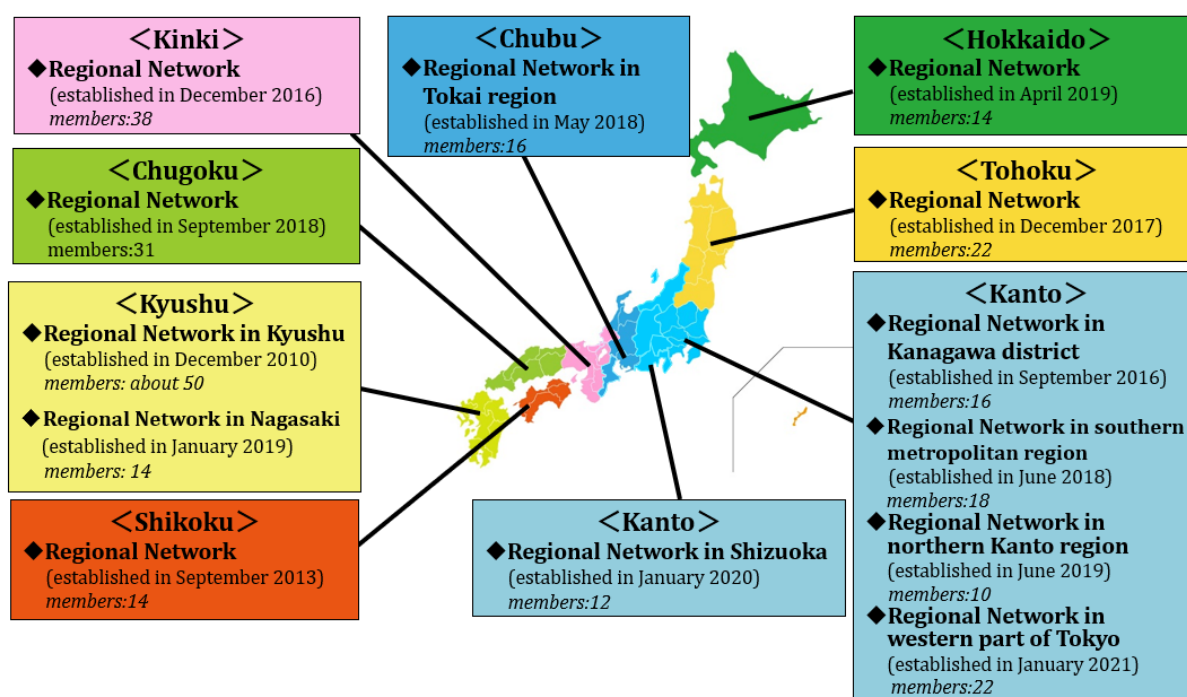

Recommended

To better respond to requests of consultation by the staff on checks for non-resident and specific category, how to fill such documents as the Classification Form or the End-use/End-user Verification Sheet as well as judgment on necessity of control, close communication between the control personnel and the staff on a routine basis is important.

It is important, particularly in the earlier stages of the control structure operation, that the staff and control personnel together examine necessary procedures under cooperation of both ends through close talks in which, for example, the staff understands the procedures required for export control while the control personnel understands research agenda of each staff.

<Major inter-university regional network>

In some regions, there are cases that inter-university network has been built between universities working on the security export control for the purpose of gaining advice from a university that has established the control structure, or exchanging consultation between universities that are now working to establish the structure in the future. It should be also beneficial to take part in activities of such inter-university networks.

As of July 2024

VII. Partial Revision of the Ministerial Ordinance for Defining Compliance Requirements for Exporters and Service Notification in 2021

1. Amending the Ministerial Ordinance for Defining Compliance Requirements for Exporters

In the present security environment, further control of sensitive goods is required from a security point of view. There are cases where sensitive and security goods exported from Japan flow out. In such a situation, it is necessary to prevent unauthorized export by checking the end-users carefully, confirming the exporters properly without blindly accepting information acquired indirectly from other than the end-users, and giving good instructions about security trade control to the subsidiaries responsible for export-related affairs of security-sensitive goods. Therefore, the amended Ministerial Ordinance for Defining Compliance Requirements for Exporters was issued on November 18, 2021 (will be enforced on May 1, 2022). The main revisions include new provisions as shown below.

- i. If information necessary to conduct checks on end-uses and end-users is collected from those other than the end-users, define procedures for improving the reliability to make such checks.
- ii. Make efforts to instruct and train the subsidiaries involved in the export of security-sensitive goods owned by the exporters.

For the relevant description, see page 79.

2. Amending the Service Notification

In the conventional deemed export control, operation was carried out with a limited interpretation given to the "Trade for Transfer to Non-Residents in Specific Countries" (Paragraph 1, Article 25 of FEFTA). As a result, a license application was required only when residents transferred sensitive technology directly to non-residents. However, the Security Trade Control Subcommittee of Commerce and Trade Working Group of Industrial Structure Council has made an interim report (hereinafter called "2021 SS Report") in June 2021 to say that the conventional control method cannot well respond to the current state in which the risk of the international outflow of sensitive technology via persons are increasing, which causes the residents (regardless of their nationalities) affected by specific countries to have the remarkable risk of being involved in the outflow of sensitive technology. In a case where the technological transfer to persons currently handled as residents regardless of their nationalities is expected to be actually the same as that to non-residents, the subcommittee proposes that the former should be deemed as export control, that is to say, "trade for transfer to non-residents in specific countries."

In accordance with the proposal, the "Notification for Amending Part of the Service Notification" was issued on November 18, 2021. As a result, the resident-to-resident transfer of technology is deemed to be that to non-residents on the condition that the receiving resident is strongly affected by the non-resident, which makes it clear that the foreign trade control applies according to the human concept based on Paragraph 1, Article 25 of FEFTA (will be enforced on May 1, 2022)

For more information, see page 33.

VIII. Representative Q&A Examples (with University-related Persons)¹⁰⁷

1. Transfer of technologies

- Q1. Tell us about the regulations for transferring controlled technologies in a foreign country. -> See p. 27
- Q2. Will education be deemed as transfer of technologies? -> See p. 27/29
- Q3. Can we say taking out such equipment that is usually carried in a suitcase will not matter if the equipment is not subject to the List Control? -> See p. 27
- Q4. Can we say there is no restriction to carrying technical data or design drawings in an overseas business trip? -> See p. 27/28
- Q5. Is the transfer of technological data free if we participate online in a closed lecture or meeting held by a foreign university with no passage to overseas? -> See p. 27/74
- Q6. Is there any aspect we should care in requesting a delivery company for shipment services via overseas courier including the Classification? -> See p. 52
- Q7. When an international student of our research department conducts a basic research without developing any product, we need to provide various technologies including technical instructions. In doing so, if the transfer of such technologies is not a "research activity in the basic science field" as a service transaction that does not require a license pursuant to the MOTRIT, do we need to file a license application for the service transaction? -> See p. 54
- Q8. In a research conducted by an international student of our research department, we need to measure data required for the research using a good subject to the List Control. As we need large volume of data, we plan to teach the student how to operate that device. Do we need to file a license application for service transaction as the transfer of technologies in use of a subject good? By the way, the research agenda of this student are in the basic science field that is not subject to the List Control. -> See p. 77
- Q9. We have a supercomputer that corresponds to 1-8 of the Appended Table of the ETCO and Item (3)-(c), Article 7 of the MOSGT. Will it be deemed as provision of service if we have it remotely accessed from overseas or used in Japan by a non-resident? -> See p. 77

2. Special provision (license exemptions)

- Q10. Can we apply the special provision of Item (ix), Paragraph 2, Article 9 of the MOTRIT to the lecture or practical work targeting such non-resident as international students, using open information, including commercially available textbooks? -> See p. 54/55
- Q11. Can we apply the special provision of Item (ix), Paragraph 2, Article 9 of the MOTRIT to the online course programs by academic institutions for the general public?
Also, can we apply the special provision of Item (ix), Paragraph 2, Article 9 of the MOTRIT to such online programs if certain qualifications are required for the audience? -> See p. 54/55
- Q12. We present our study results in a conference or other occasions from time to time to make such results publicly known. Can we apply the special provision of Item (ix), Paragraph 2, Article 9 of the MOTRIT to such a case? Also, can we apply the special provision of Item (ix), Paragraph 2, Article 9 of the MOTRIT to the content of the questions and answers for the said presentation? -> See p. 54/55
- Q13. As I understand that no license is required in sending manuscripts for a conference, is it still so if the manuscripts are sensitive? -> See p. 54/55

¹⁰⁷ Check the METI Q&A page, which summarizes these questions and answers ("Q&A for academic and research institutions" on <https://www.meti.go.jp/policy/anpo/qanda.html>).

Q14. Do we need to obtain a license to provide information on patented technologies/goods? -> See p. 54/56

Q15. In transferring a technology to a non-resident, do we need to conduct the Classification if the technology is verified as one in the public domain after examining the "publicly known" exemptions first? -> See p. 54 (footnote)

3. Residents and non-residents

Q16. When a resident transfers a controlled technology to a person from country "B" who works at a research institution having an office in country "A", to which country is such transfer deemed to be? -> See p. 30

Q17. Is a foreigner employed by a university in Japan for two months deemed to be a resident? -> See p. 30 (footnote)

Q18. We are foreigners employed by a university in Japan, but have not yet gone to Japan. If we conduct remote work in our countries, are we residents? -> See p. 30 (footnote)

Q19. When an international student re-enters after such a long absence such as summer vacation, how should we judge this student's residency status? -> See p. 30 (footnote)

Q20. We may assign an international student staying in Japan for less than six months to a joint research with a business entity. To what aspects should we pay attention? -> See p. 69/75

Q21. For an international student staying in Japan for six months or longer, what cases will require a license application? -> See p. 69/70

Q22. Can a researcher visiting Japan who is still enrolled in a foreign institution such as university be deemed as a resident after six months of stay?

Or, can we presume such person is a non-resident after six months based on the consideration that such transfer of technology was made towards the foreign institution in which that researcher is enrolled-> See p. 69/70

Q23. To what aspects should we pay attention when a university invites many researchers from foreign countries for such occasion as academic conference? -> See p. 54/57/76

4. Specific-category person

Q24. What is a specific category? Who falls in it? -> See p. 33-36

Q25. How do we determine whether the receiver falls in a specific category? -> See p. 36-39

Q26. We plan to research jointly with a university and corporation. Is it necessary to check whether both partners let specific-category persons participate in the joint project? -> See p. 40-41

5. Catch-all Control

- Q27. What we teach international students are not provided in the context of what their end-use will be. How should we tackle this issue in light of the WMD Catch-all Control? -> See p. 47/69
- Q28. We have no means to examine whether or not there are concerns over a foreign institution or company. What shall we do? -> See p. 47/71
- Q29. With an international joint research, our university cannot determine if involved technologies/goods will be used for development, etc., of WMD because our counterpart will not publish any article of the research. If such case is subject to control, we might have to give up any joint research. How should we make a judgment when we are participating a joint research? -> See p. 75
- Q30. We would like to consult METI in the process of screening for, e.g., WMD Catch-all Control. Which department should we contact? -> See p. 48/136

6. Legal violations

- Q31. Who will be held responsible if we have exported a good subject to a license without conducting verification because we were informed by the manufacturer that the good is not subject to the List Control? -> See p. 52
- Q32. When violation of FEFTA is found, can a university escape the responsibility if the export process was subcontracted to a customs clearance agent? -> See p. 52
- Q33. Will the punishment for a legal violation case only involve the person who actually exported the subject goods? -> See p. 24
- Q34. Despite that a case of transfer of technology subject to the WMD Catch-all Control has been verified as "of no concern" in the "objective condition" screening, the technology ended up being used for development, etc., of WMD after the transfer. Will this case be punished? -> See p. 47 (footnote)
- Q35. If we carry data of a controlled technology recorded on a USB drive and have it lost or stolen, will it constitute a breach of FEFTA? -> See p. 75
- Q36. I understand that a license is not required when we carry a PC for personal use in a private overseas trip. If that PC contains data of a controlled technology, and when it is lost or stolen and found being used by someone else, what will be the punishment by FEFTA for the transfer of technologies? -> See p. 75

IX. Example Program and Forms

- XX University/Research Institute Compliance Program for Security Export Control
- Pre-screening Sheet for Transfer of Technologies and Export of Goods
- Pre-screening Sheet for Accepting Foreigners (International Students, Researchers, Teachers, Visitors)
- Pre-screening Sheet for Accepting Specific-category Persons (Students, Researchers, and Teachers except Foreigners)
- Screening Form (for Transfer of Technologies and Export of Goods)
- Screening Form (for Accepting Foreigners: International Students, Researchers, Teachers and Visitors or Specific-category Persons)
- "End-use" Check Sheet
- "End-user" Check Sheet
- "Apparent" Guideline Sheet
- Classification Form
- List of Correspondence between Related Categories in the Foreign Exchange Order and the Technical Specification (Performance)
- Pledge Certificate
- (Reference) Specific Categories
- Pledge Certificate of Specific-category Classification for Observing Paragraphs 1 and 2, Article 25 of FEFTA
- (Reference) Simple Flowchart for Checking for Specific Category

Note: These form/sheet examples are available for download on the following website.

<https://www.meti.go.jp/policy/anpo/law08.html#jishukanri>

Note: These form/sheet examples are just for reference and actual use of them is left to decision of each academic/research institution depending on its organizational nature/operations.

XX University/Research Institute Compliance Program for Security Export Control

[Purpose]

Article 1. The purpose of Program hereunder is to stipulate required provisions for the [XX academic/research institution] for proper security export control (hereinafter referred to as "Export Control") with consideration of the sound development of academic studies, in order to contribute to the preservation of the peace and security of the international community.

[Definition of terms]

Article 2. The terms used in the Program shall be as defined in the items below:

- i. "FEFTA, etc." means the Foreign Exchange and Foreign Trade Act (Act No.228 of 1949, hereinafter referred to as "the Act") and cabinet orders, ministerial orders and notifications pursuant to the Act.
- ii. "Transfer of Technologies" means to deliver technologies, for example, transfer in foreign countries, transfer to overseas, transfer to non-residents or specific-category persons, or transfer to residents who obviously re-transfer technologies to non-residents or specific-category persons.
- iii. "Export of Goods" means to ship goods: to a foreign country (including carrying such goods overseas as a part of baggage); or, within Japan when such goods will be apparently shipped to a foreign country.
- iv. "Transaction" means Transfer of Technologies or Export of Goods.
- v. "List-controlled Technologies" mean technologies set forth by Categories 1 through 15 of the Appended Table of the Foreign Exchange Order (Cabinet Order #260 of 1980).
- vi. "List-controlled Goods" mean goods set forth by Categories 1 through 15 in Appendix I of the Export Trade Control Order (Cabinet Order No. 378 of 1949).
- vii. "Catch-all Control" means a control measure that requires filing a license application to the Minister of Ministry of Economy, Trade and Industry (hereinafter referred as "METI") in case the technologies set forth by Category 16 of the Appended Table of the Foreign Exchange Order or goods set forth by Category 16 of the Appended Table 1 of the Export Trade Control Order could be used for development, etc., of weapons of mass destruction or conventional weapons.
- viii. "Classification" means to determine whether or not the technologies to transfer or goods to export are deemed to be the List-controlled Technologies/Goods.
- ix. "Transaction Screening" means, in addition to Classification of the technologies to transfer or goods to export are subject to the List-controlled technologies/goods, to verify the end-use and end-user (or one who receives or uses the technologies, one who imports or uses the goods, or its agency) and then decide whether or not the Transaction should be made as [the university/institution].
- x. "Weapons of mass destruction (hereinafter referred to as "WMD") mean nuclear weapons, chemical/bacterial warfare agents or the equipment for application thereof or the rocket or unmanned aerial vehicle for transportation thereof.
- xi. "Conventional Weapons" mean non-WMD weapons set forth by Category 1 of the Appended Table 1 of the Export Trade Control Order.
- xii. "Development, etc., of WMD" means development, manufacture, use or storage of WMD.
- xiii. "Development, etc., of Conventional Weapons" means development, manufacture or use of conventional weapons.
- xiv. "Resident" means a natural person or corporation that is handled as a resident in accordance with Sections 6-1-5 and -6 (Residency Judgment Criteria) of "Interpretation and Operation of Foreign Exchange Order" (No. 4672 issued on November 29, 1980).
- xv. "Non-resident" means a natural person or corporation other than residents.
- xvi. "Specific-category Person" means one (limited to a resident regarded as a natural person) who is shown in 1(3) k (i)-(iii) of regarding act or transaction providing technologies that require a license based on in Paragraph 1, Article 25 of FEFTA and

Paragraph 2, Article 17 of the FEO (4TECB, No. 492).

xvii. "Staff" includes professors, associate professors, instructors, and other personnel hired by this university regardless of full- or part-time employment.

xviii. "Subsidiary" means a corporation specified in Item 3, Article 2 of the Companies Act (Act No. 86 of 2005).

xix. "Coaching" means to educate and train subsidiaries and check their work systems and tasks.

[Scope of Application]

Article 3. The Program apply to all operations associated with Transfer of Technologies and Export of Goods carried out by [the (employees of the) university/institution].

[Basic Policy]

Article 4. The basic policy of [the university/institution] is as follows:

- i. We will not conduct Transfer of Technologies or Export of Goods that may preclude preservation of the peace and security of the international community.
- ii We will keep compliance with FEFTA, etc., and when the license of the Minister of METI is required, we will responsibly obtain such license.
- iii We will assign officer(s) responsible for export control while properly establish and enhance the export control structure in order to ensure its implementation.

[Chief Export Control Officer]

Article 5. 1) [The university/institution] appoints its President/Chairperson to Chief Export Control Officer (hereinafter referred to as "CECO").

2) CECO shall be responsible for the final decision of critical matters for export control in addition to institution/revision/repeal of the Program and establishment of the recurrence prevention measures against an incident of breach of FEFTA, etc., or the Program.

[Responsible Officer for Export Control]

Article 6. 1) CECO shall appoint one Vice President/Vice Chairperson of [the university/institution] to Responsible Officer for Export Control (hereinafter referred to as "ROEC") responsible for commanding the export control operations.

2) ROEC shall be in command of the export control of [the university/institution] following the direction of CECO and implement operations stipulated in the Program, including but not limited to development of revision/repeal drafts of the Program; institution/revision/repeal of the operational procedures (detailed rules); grasp of specific-category persons; final approval of Classification and Transaction Screening results; and license application processing, document control, audits, and training/education for the export control.

[Export Control Officer]

Article 7. 1) Export Control Officer(s) (hereinafter referred to as "ECO") reporting to ROEC shall be appointed by ROEC for clerical work of the export control.

2) ECO shall support ROEC and conduct operations stipulated in the Program, including but not limited to confirmation of the Pre-screening Sheets and operation of the consultation service.

[Export Control Committee]

Article 8. 1) For deliberation on critical matters for the export control by [the university/institution], Export Control Committee (hereinafter referred to as "Committee") reporting to ROEC shall be formed.

2) Committee deliberates the matters on:

- i. Development of drafts for the revision/repeal of the Program;
- ii. deliberation on the Classification, application of the exemptions and Transaction Screening;
- iii. training/enlightenment activities for the staff;

- iv. audits; and
 - v. others related to the export control.
- 3) Committee shall be chaired by ROEC and shall consist of the following members:
- i. ROEC;
 - ii. Faculty/Research Directors;
 - iii. ECO; and
 - iv. others authorized as required by the chair.

[Pre-screening]

Article 9. 1) When Transfer of Technologies or Export of Goods is anticipated, the staff shall verify information about the concerns over the end-users, the classification of non-residents or specific categories, and if the exemptions (for technologies in the public domain or for research activities in the basic science field) are applicable or not, based on the "Pre-screening Sheet" that is separately set forth herein, and then, obtain the approval of ECO for whether or not the Transaction Screening procedures are required. The pre-screening using "Pre-screening Sheet" can be cut, provided that the Transaction Screening is apparently required.

2) If the Transaction Screening is determined, through the pre-screening described in the preceding paragraph, to be necessary or is being apparently conducted, the staff shall issue the form for and verify the provisions of Articles 10 [Classification], 11 [End-use Verification] and 12 [End-use Verification], and follow the Transaction Screening procedure set forth in Article 13.

3) If the Transaction Screening is determined, through the pre-screening described in the preceding paragraph, to be unnecessary, the staff may conduct such transaction.

[Classification]

Article 10. 1) If the Transaction Screening is determined to be necessary, the staff shall classify whether or not the said technologies or goods are deemed to be the List-controlled Technologies/Goods and issue the "Classification Form."

2) Classification shall be conducted in the following manner:

- i. The staff who may conduct Transfer of Technologies or Export of Goods studied/developed in [the university/institution] shall organize necessary technical documents and conduct Classification on whether or not such technologies/goods are deemed to be the List-controlled Technologies/Goods pursuant to the latest FEFTA, etc.
- ii. The staff who may conduct Transfer Technologies or Export Goods obtained from a party outside [the university/institution] shall obtain documents including Classification certificates from such party and properly conduct Classification in the same manner as in the preceding item. However, obtaining such documents from such party can be excepted if, without obtaining such documents from such party, Classification by [the university/institution] of such technologies/goods is possible through the procedures described in the preceding item.

[End-use Verification]

Article 11. When the Transaction Screening is determined to be necessary, the staff shall verify whether or not use for the Development, etc., of WMD/Conventional Weapons is concerned over the technologies or goods using the "End-use Check Sheet" and "The Guideline for Judging 'When Apparent' (hereinafter referred to as "When Apparent" Guideline)" that are separately set forth herein. Regarding information acquired indirectly from other than the end-users, the staff shall define procedures for improving its reliability and make checks according to the procedures.

[End-user Verification]

Article 12. When the Transaction Screening is determined to be necessary, the staff shall, using the "End-use Check Sheet" and "The Guideline for Judging 'Apparent' (hereinafter referred to as "Apparent" Guideline)" that are separately set forth herein, verify whether or not the end-users of the technologies or goods are:

- i. with cause to suspect existence/identity of the parties involved in the transfer/export route;
- ii. listed in the "Foreign End User List" published by METI;

- iii. designated in the obtained documents or in a separately obtained information as a person/party that has conducted Development, etc., of WMD/Conventional Weapons in the past; or
- iv. attached to a military force, military-related institution or other equivalent institution.

Regarding information acquired indirectly from other than the end-users, the staff shall define procedures for improving its reliability and make checks according to the procedures.

[Transaction Screening]

Article 13. 1) When Transfer of Technologies or Export of Goods is anticipated and the Transaction Screening procedures are determined to be necessary, the staff shall obtain approvals of ECO through the primary screening and of ROEC through the secondary screening, in light of the List Control and Catch-all Control, using the "Screening Form" that is separately set forth herein.

2) Information including the destination, the name of the technologies/goods, the end-users and end-uses have to be specified in the "Screening Form", with documents required for the screening attached.

[License Application]

Article 14. 1) When a license of the Minister of METI pursuant to FEFTA, etc., is required through the approval described in Paragraph 1 of the preceding Article, ROEC shall file the license application to the Minister.

2) The documents to be filed for such license application must be correctly filled based on the facts.

3) The staff who may conduct Transfer of Technologies or Export of Goods that requires a license pursuant to the FEFTA, etc., shall not conduct such transfer or export unless such license is verified to have been obtained.

[Controlling Transfer of Technologies]

Article 15. 1) Upon conducting Transfer of Technologies, the staff shall verify that the procedures for Pre-screening set forth in Article 9 and for Transaction Screening set forth in Article 13 have been conducted, and additionally that a license of the Minister of METI has been obtained if the transaction requires a license pursuant to FEFTA, etc. However, if the Transaction Screening is approved to be unnecessary pursuant to the pre-screening set forth in Paragraph 1) in Article 9, the Transaction Screening procedure set forth in Article 13 are not required.

2) Unless the verification described in the preceding paragraph is completed, the staff shall not conduct such Transfer of Technologies.

[Controlling Export of Goods]

Article 16. 1) Upon conducting Export of Goods, the staff shall verify that the procedures for Pre-screening set forth in Article 9 and for Transaction Screening set forth in Article 13 have been conducted, as well as the goods are identical to the information provided in the shipping documents, and additionally that a license of the Minister of METI has been obtained if the Export of Goods requires a license pursuant to FEFTA, etc. However, if the Transaction Screening is approved to be unnecessary pursuant to the pre-screening set forth in Paragraph 1) in Article 9, the Transaction Screening procedure set forth in Article 13 are not required.

2) Unless the verification described in the preceding paragraph is completed, the staff shall not conduct such Export of Goods.

3) If any incident occurs during the customs clearance, the staff shall immediately suspend such export process and promptly report such incident to ECO, while ECO shall discuss such incident with ROEC to take appropriate measures.

[Documents Control/Record Keeping]

Article 17. The staff shall retain documents, drawings or electromagnetic records related to the export control for at least seven (7) years from the date of the Transfer of Technologies or Export of Goods, under direction of ROEC and ECO.

[Audits]

Article 18. Under direction of ROEC, ECO shall periodically conduct audits to verify that the export control of [the university/institution] is properly implemented in accordance with the Program.

[Survey]

Article 19. ROEC shall conduct a survey on the status of List-controlled Technologies property every year in order for proper and effective export control.

[Coaching]

Article 20. ROEC shall provide the staff with coaching required for raising awareness of the latest FEFTA, etc., as well as compliance with governing regulations.

[Education]

Article 21. Under direction of ROEC, ECO shall provide the staffs with periodic education to secure understanding of the significance of FEFTA, etc., and the Program, and to ensure precise implementation thereof.

[Coaching Subsidiaries]

Article 22. ROEC shall regularly give necessary instructions to the subsidiaries that are involved in the trade control activities of its own list-controlled technologies or goods in order to keep them working properly.

[Reporting]

Article 23. 1) When the staff come to know a fact of breach or potential breach of FEFTA, etc., or the Program, they shall promptly report such a fact to ECO.

2) When such a fact as in the preceding paragraph is reported, ECO shall promptly so notify ROEC while investigating the reported incident, and shall report the results to ROEC.

3) If the breach or potential breach of FEFTA, etc., becomes apparent from the report described in the preceding paragraph, ROEC shall so notify CECO, directing the departments concerned to take responding measures, and shall report the incident to the government authorities concerned with the least delay. Meanwhile, CECO shall take the measures required for recurrence prevention thereof.

[Disciplinary Actions]

Article 24. In breach of FEFTA, etc., or the Program due to willful misconduct or gross negligence of the staff, they shall be subject to disciplinary punishments pursuant to the work rules stipulated by [the university/institution].

[Administrative Governance]

Article 25. Administrative processes for the Program shall be governed by Division of XXXX.

[Miscellaneous]

Article 26. Any other provisions required in addition to the Program shall be separately appended as detailed rules.

[Supplementary]

The Program shall be enforced as of MM/DD/YYYY.

Note: Described above is just a reference case and its actual usage is left to management of respective academic or research institute.

XX University/Research Institute Compliance Program for Security Export Control

[Purpose]

Article 1. The purpose of Program hereunder is to stipulate required provisions for the [XX academic/research institution] for proper security export control (hereinafter referred to as "Export Control") with consideration of the sound development of academic studies, in order to contribute to the preservation of the peace and security of the international community.

[Definition of terms]

Article 2. The terms used in the Program shall be as defined in the items below:

- i. "FEFTA, etc." means the Foreign Exchange and Foreign Trade Act (Act No.228 of 1949, hereinafter referred to as "the Act") and cabinet orders, ministerial orders and notifications pursuant to the Act.
- ii. "Transfer of Technologies" means to deliver technologies, for example, transfer in foreign countries, transfer to overseas, transfer to non-residents or specific-category persons, or transfer to residents who obviously re-transfer technologies to non-residents or specific-category persons.
- iii. "Export of Goods" means to ship goods: to a foreign country (including carrying such goods overseas as a part of baggage); or, within Japan when such goods will be apparently shipped to a foreign country.
- iv. "Transaction" means Transfer of Technologies or Export of Goods.
- v. "List-controlled Technologies" mean technologies set forth by Categories 1 through 15 of the Appended Table of the Foreign Exchange Order (Cabinet Order #260 of 1980).
- vi. "List-controlled Goods" mean goods set forth by Categories 1 through 15 in Appendix I of the Export Trade Control Order (Cabinet Order No. 378 of 1949).
- vii. "Catch-all Control" means a control measure that requires filing a license application to the Minister of Ministry of Economy, Trade and Industry (hereinafter referred as "METI") in case the technologies set forth by Category 16 of the Appended Table of the Foreign Exchange Order or goods set forth by Category 16 of the Appended Table 1 of the Export Trade Control Order could be used for development, etc., of weapons of mass destruction or conventional weapons.
- viii. "Classification" means to determine whether or not the technologies to transfer or goods to export are deemed to be the List-controlled Technologies/Goods.
- ix. "Transaction Screening" means, in addition to Classification of the technologies to transfer or goods to export are subject to the List-controlled technologies/goods, to verify the end-use and end-user (one who receives or uses the technologies, one who imports or uses the goods, or its agency) and then decide whether or not the Transaction should be made as [the university/institution].
- x. "Weapons of mass destruction (hereinafter referred to as "WMD") mean nuclear weapons, chemical/bacterial warfare agents or the equipment for application thereof or the rocket or unmanned aerial vehicle for transportation thereof.
- xi. "Conventional Weapons" mean non-WMD weapons set forth by Category 1 of the Appended Table 1 of the Export Trade Control Order.
- xii. "Development, etc., of WMD" means development, manufacture, use or storage of WMD.
- xiii. "Development, etc., of Conventional Weapons" means development, manufacture or use of conventional weapons.
- xiv. "Resident" means a natural person or corporation that is handled as a resident in accordance with Sections 6-1-5 and -6 (Residency Judgment Criteria) of "Interpretation and Operation of Foreign Exchange Order" (No. 4672 issued on November 29, 1980).
- xv. "Non-resident" means a natural person or corporation other than residents.
- xvi. "Specific-category Person" means one (limited to a resident regarded as a natural person) who is shown in 1(3) k (i)-(iii) of regarding act or transaction providing technologies that require a license based on in Paragraph 1, Article 25 of FEFTA and

Paragraph 2, Article 17 of the FEO (4TECB, No. 492).

xvii. "Staff" includes professors, associate professors, instructors, and other personnel hired by this university regardless of full- or part-time employment.

xviii. "Subsidiary" means a corporation specified in Item 3, Article 2 of Companies Act (Act No. 86 of 2005).

xix. "Coaching" means to educate and train subsidiaries and check their work systems and tasks.

[Scope of Application]

Article 3. The Program apply to all operations associated with Transfer of Technologies and Export of Goods carried out by [the (employees of the) university/institution].

[Basic Policy]

Article 4. The basic policy of [the university/institution] is as follows:

- i. We will not conduct Transfer of Technologies or Export of Goods that may preclude preservation of the peace and security of the international community.
- ii. We will keep compliance with FEFTA, etc., and when the license of the Minister of METI is required, we will responsibly obtain such license.
- iii. We will assign officer(s) responsible for export control while properly establish and enhance the export control structure in order to ensure its implementation.

[Chief Export Control Officer]

Article 5. 1) [The university/institution] appoints its President/Chairperson to Chief Export Control Officer (hereinafter referred to as "CECO").

2) CECO shall be responsible for the final decision of critical matters for export control in addition to institution/revision/repeal of the Program and establishment of the recurrence prevention measures against an incident of breach of FEFTA, etc., or the Program.

[Responsible Officer for Export Control]

Article 6. 1) CECO shall appoint one Vice President/Vice Chairperson of [the university/institution] to Responsible Officer for Export Control (hereinafter referred to as "ROEC") responsible for commanding the export control operations.

2) ROEC shall be in command of the export control of [the university/institution] following the direction of CECO and implement operations stipulated in the Program, including but not limited to development of revision/repeal drafts of the Program; institution/revision/repeal of the operational procedures (detailed rules); grasp of specific-category persons; final approval of Classification and Transaction Screening results; and license application processing, document control, audits, and training/education for the export control.

[Export Control Officer]

Article 7. 1) Export Control Officer(s) (hereinafter referred to as "ECO") reporting to ROEC shall be appointed by ROEC for clerical work of the export control.

2) ECO shall support ROEC and conduct operations stipulated in the Program, including but not limited to confirmation of the Pre-screening Sheets and operation of the consultation service.

[Departmental ECO]

Article 8. 1) Heads of Department shall be appointed to Departmental Export Control Officers (hereinafter referred to as "DECO") for clerical work of the export control.

2) DECO shall conduct operations stipulated in the Program, including but not limited to approval of the Pre-screening Sheets, Classification and Transaction Screening.

[Export Control Committee]

Article 9. 1) For deliberation on critical matters for the export control by [the university/institution], Export Control Committee (hereinafter referred to as "Committee") reporting to ROEC shall be formed.

2) Committee deliberates the matters on:

- i. Development of drafts for the revision/repeal of the Program;
- ii. deliberation on the Classification, application of the exemptions and Transaction Screening;
- iii. training/enlightenment activities for the staff;
- iv. audits; and
- v. others related to the export control.

3) Committee shall be chaired by ROEC and shall consist of the following members:

- i. ROEC;
- ii. DECO;
- iii. ECO; and
- iv. others authorized as required by the chair.

[Pre-screening]

Article 10. 1) When Transfer of Technologies or Export of Goods is anticipated, the staff shall verify information about the concerns over the end-users, the classification of non-residents or specific categories, and if the exemptions (for technologies in the public domain or for research activities in the basic science field) are applicable or not, based on the "Pre-screening Sheet" that is separately set forth herein, and then, obtain the approval of DECO for whether or not the Transaction Screening procedures are required. The pre-screening using "Pre-screening Sheet" can be cut, provided that the Transaction Screening is apparently required.

2) "Pre-screening Sheets" approved by DECO shall be forwarded to ECO for confirmation thereby.

3) If the Transaction Screening is determined, through the pre-screening described in Paragraph (1), to be necessary or is being apparently conducted, the staff shall issue the form for and verify the provisions of Articles 11 [Classification], 12 [End-use Verification] and 13 [End-use Verification], and follow the Transaction Screening procedure set forth in Article 13.

4) If the Transaction Screening is determined, through the pre-screening described in the paragraph 1), to be unnecessary, the staff may conduct such transaction.

[Classification]

Article 11. 1) If the Transaction Screening is determined to be necessary, the staff shall classify whether or not the said technologies or goods are deemed to be the List-controlled Technologies/Goods and issue the "Classification Form."

2) Classification shall be conducted in the following manner:

i. The staff who may conduct Transfer of Technologies or Export of Goods studied/developed in [the university/institution] shall organize necessary technical documents and conduct Classification on whether or not such technologies/goods are deemed to be the List-controlled Technologies/Goods pursuant to the latest FEFTA, etc.

ii. The staff who may conduct Transfer Technologies or Export Goods obtained from a party outside [the university/institution] shall obtain documents including Classification certificates from such party and properly conduct Classification in the same manner as in the preceding item. However, obtaining such documents from such party can be excepted if, without obtaining such documents from such party, Classification by [the university/institution] of such technologies/goods is possible through the procedures described in the preceding item.

[End-use Verification]

Article 12. When the Transaction Screening is determined to be necessary, the staff shall verify whether or not use for the Development, etc., of WMD/Conventional Weapons is concerned over the technologies or goods using the "End-use Check Sheet" and "The Guideline for Judging 'When Apparent' (hereinafter referred to as "When Apparent" Guideline)" that are separately set forth herein. Regarding information acquired indirectly from other than the end-users, the staff shall define procedures for improving its reliability and make checks according to the procedures.

[End-user Verification]

Article 13. When the Transaction Screening is determined to be necessary, the staff shall, using the "End-use Check Sheet" and "The Guideline for Judging 'Apparent' (hereinafter referred to as " Apparent" Guideline)" that are separately set forth herein, verify whether or not the end-users of the technologies or goods are:

- i. with cause to suspect existence/identity of the parties involved in the transfer/export route;
- ii. listed in the "Foreign End User List" published by METI;
- iii. designated in the obtained documents or in a separately obtained information as a person/party that has conducted Development, etc., of WMD/Conventional Weapons in the past; or
- iv. attached to a military force, military-related institution or other equivalent institution.

Regarding information acquired indirectly from other than the end-users, the staff shall define procedures for improving its reliability and make checks according to the procedures.

[Transaction Screening]

Article 14. 1) When Transfer of Technologies or Export of Goods is anticipated and the Transaction Screening procedures are determined to be necessary, the staff shall obtain approvals of DECO through the primary screening and of ROEC through the secondary screening, in light of the List Control and Catch-all Control, using the "Screening Form" that is separately set forth herein. 2) Information including the destination, the name of the technologies/goods, the end-users and end-uses have to be specified in the "Screening Form", with documents required for the screening attached.

[License Application]

Article 15. 1) When a license of the Minister of METI pursuant to FEFTA, etc., is required through the approval described in Paragraph 1 of the preceding Article, ROEC shall file the license application to the Minister. 2) The documents to be filed for such license application must be correctly filled based on the facts. 3) The staff who may conduct Transfer of Technologies or Export of Goods that requires a license pursuant to the FEFTA, etc., shall not conduct such transfer or export unless such license is verified to have been obtained.

[Controlling Transfer of Technologies]

Article 16. 1) Upon conducting Transfer of Technologies, the staff shall verify that the procedures for Pre-screening set forth in Article 10 and for Transaction Screening set forth in Article 14 have been conducted, and additionally that a license of the Minister of METI has been obtained if the transaction requires a license pursuant to FEFTA, etc. However, if the Transaction Screening is approved to be unnecessary pursuant to the pre-screening set forth in Paragraph 1) in Article 10, the Transaction Screening procedure set forth in Article 14 are not required.

2) Unless the verification described in the preceding paragraph is completed, the staff shall not conduct such Transfer of Technologies.

[Controlling Export of Goods]

Article 17. 1) Upon conducting Export of Goods, the staff shall verify that the procedures for Pre-screening set forth in Article 10 and for Transaction Screening set forth in Article 14 have been conducted, as well as the goods are identical to the information provided in the shipping documents, and additionally that a license of the Minister of METI has been obtained if the Export of Goods requires a license pursuant to FEFTA, etc. However, if the Transaction Screening is approved to be unnecessary pursuant to the pre-screening set forth in Paragraph (1) in Article 10, the Transaction Screening procedure set forth in Article 14 are not required.

2) Unless the verification described in the preceding paragraph is completed, the staff shall not conduct such Export of Goods.

3) If any incident occurs during the customs clearance, the staff shall immediately suspend such export process and promptly report such incident to ECO, while DECO shall discuss such incident with ROEC to take appropriate measures.

[Documents Control/Record Keeping]

Article 18. The staff shall retain documents, drawings or electromagnetic records related to the export control for at least seven (7)

years from the date of the Transfer of Technologies or Export of Goods, under direction of ROEC and ECO.

[Audits]

Article 19. Under direction of ROEC, ECO and DECO shall periodically conduct audits to verify that the export control of [the university/institution] is properly implemented in accordance with the Program.

[Survey]

Article 20. ROEC shall conduct a survey on the status of List-controlled Technologies property every year in order for proper and effective export control.

[Coaching]

Article 21. ROEC shall provide the staff with coaching required for raising awareness of the latest FEFTA, etc., as well as compliance with governing regulations.

[Education]

Article 22. Under direction of ROEC, ECO and DECO shall provide the staffs with periodic education to secure understanding of the significance of FEFTA, etc., and the Program, and to ensure precise implementation thereof.

[Coaching Subsidiaries]

Article 23. ROEC shall regularly give necessary instructions to the subsidiaries that are involved in the trade control activities of its own list-controlled technologies or goods in order to keep them working properly.

[Reporting]

Article 24. 1) When the staff come to know a fact of breach or potential breach of FEFTA, etc., or the Program, they shall promptly report such a fact to ECO.

2) When such a fact as in the preceding paragraph is reported, ECO shall promptly so notify ROEC while investigating the reported incident, and shall report the results to ROEC.

3) If the breach or potential breach of FEFTA, etc., becomes apparent from the report described in the preceding paragraph, ROEC shall so notify CECO, directing the departments concerned to take responding measures, and shall report the incident to the government authorities concerned with the least delay. Meanwhile, CECO shall take the measures required for recurrence prevention thereof.

[Disciplinary Actions]

Article 25. In breach of FEFTA, etc., or the Program due to willful misconduct or gross negligence of the staff, they shall be subject to disciplinary punishments pursuant to the work rules stipulated by [the university/institution].

[Administrative Governance]

Article 26. Administrative processes for the Program shall be governed by Desk of XXXX.

[Miscellaneous]

Article 27. Any other provisions required in addition to the Program shall be separately appended as detailed rules.

[Supplementary]

These Program shall be enforced as of MM/DD/YYYY.

Note: Described above is just a reference case and its actual usage is left to management of respective academic or research institute.

Pre-screening Sheet (for Transfer of Technologies and Export of Goods)

Date filed: YY /MM /DD

Department/Title

E-mail

Note: Filling and submitting this Sheet is required prior to your transfer of technologies or export of goods.

Note: You have to submit this sheet minimum of XX day(s) [to be set forth by each university's control procedure] prior to the transfer/export of technologies/goods to the officer responsible for YY [to be set forth by each university's export control structure].

1. Transaction class/type

Transaction classification	<input type="checkbox"/> Joint research <input type="checkbox"/> Contracted research <input type="checkbox"/> Transfer study results <input type="checkbox"/> Academic exchange agreement [NDA (<input type="checkbox"/> Yes <input type="checkbox"/> No)] <input type="checkbox"/> Attending/participating/hosting conferences, etc. <input type="checkbox"/> Overseas business trip <input type="checkbox"/> Others (Please describe.) ()
Transaction type	<input type="checkbox"/> Transfer of technologies(Check all transfer methods being used.) <input type="checkbox"/> Education/presentation <input type="checkbox"/> Dialog <input type="checkbox"/> Telephone conversation <input type="checkbox"/> Email transmission <input type="checkbox"/> File exchange using Internet <input type="checkbox"/> Upload to the shared database <input type="checkbox"/> Sending documents <input type="checkbox"/> Sending recordable media <input type="checkbox"/> Providing manuals/drawings/data, etc. <input type="checkbox"/> Transfer of technologies/computer programs associated with provision of equipment, etc. <input type="checkbox"/> Others (Please describe.) ()] <input type="checkbox"/> Export of goods (Check the corresponding shipment.) [<input type="checkbox"/> Samples <input type="checkbox"/> Equipment (<input type="checkbox"/> original <input type="checkbox"/> modified <input type="checkbox"/> purchased) <input type="checkbox"/> Others (Please describe.)()]

2. End-user/counterpart information

Counterparty of the agreement	Name (English):						
	Location/address:						
	* <input type="checkbox"/> Non-resident <input type="checkbox"/> Specific-category person (<input type="checkbox"/> Category 1 <input type="checkbox"/> Category 2 <input type="checkbox"/> Category 3) Classification grounds ()						
Demander/end-user	Name (English):						
	Location/address:						
	* <input type="checkbox"/> Non-resident <input type="checkbox"/> Specific-category person (<input type="checkbox"/> Category 1 <input type="checkbox"/> Category 2 <input type="checkbox"/> Category 3) Classification grounds ()						
Destination (nation):							
Transaction paths	<div style="display: flex; justify-content: space-between;"> -> -> </div>						
The agreement will be executed on:	YY	/MM	/DD	The transaction will take place between:	YY and YY	/MM /MM	/DD /DD

* Fill in this field by contacting the person in charge of XX only when the technology is transferred to the domestic end-user. The classification of specific categories is necessary only when the end-user is a natural person. In the "Classification grounds" field, write the relevant foreign government or corporation (with its country or region name).

3. Information of the technologies/goods

Research Division/Department/Laboratory	
The person conducting the transfer/export of technologies/goods	
Name and specification of the technologies/goods to be transferred/exported	
Intended end-use of the end- user/counterpart	

Note: If more than one person is scheduled to conduct the transfer/export, please fill in all such persons in the "The person conducting the transfer/export of technologies/goods" field.

Note: "Name and specification of the technologies/goods to be transferred/exported" and "Intended end-use of the end-user/counterpart" must be described as much in detail as possible. If the field provided is not enough, you can attach an exhibit.

4. Information about the concerns about the end-user/counterpart

The end-user/counterpart is found in the Foreign End User List (*)	<input type="checkbox"/> Yes <input type="checkbox"/> No
The destination is one of the Countries of Concern (Iran, Iraq or North Korea) or Countries/regions Under UNSC Arms Embargo (Afghanistan, Central African Republic, Democratic Republic of the Congo, South Sudan, Iraq, Lebanon, Libya, North Korea, Somalia or Sudan)	<input type="checkbox"/> Yes <input type="checkbox"/> No
From the information obtained and such public domain information as on the website, the end-user/counterpart has been or is suspected to have been involved development, etc., of technologically advanced materials/parts/products for or for use in WMD or conventional weapons.	<input type="checkbox"/> Yes <input type="checkbox"/> No
From the information obtained and such public domain information as on the website, the technologies/goods to transfer/export are suspected to be used for WMD (nuclear/chemical/biological weapons, rockets/unmanned aerial vehicles) or conventional weapons, or, development, etc. (development, manufacture, use or storage), of technologically advanced materials/parts/products for use therein.	<input type="checkbox"/> Yes <input type="checkbox"/> No
From the information obtained and such public domain information as on the website, the technologies/goods to transfer/export are suspected to be used for research on nuclear fusion, or development, etc., of nuclear fuel materials or nuclear reactors.	<input type="checkbox"/> Yes <input type="checkbox"/> No
From the information obtained and such public domain information as on the website, the technologies/goods to transfer/export are suspected to be used by the military force or the police of a foreign nation, or a party subcontracted by such parties, for development, etc., of chemical substances/microbes/toxins or space researches.	<input type="checkbox"/> Yes <input type="checkbox"/> No
Otherwise, we have other information about the concerns on security export control about the end-user/counterpart or end-use. (If Yes, please describe in the field below.)	<input type="checkbox"/> Yes <input type="checkbox"/> No

* Check the Foreign End User List on the METI website (<https://www.meti.go.jp/policy/ampo/law05.html#user-list>).

If "Yes" is checked for the other information about the concerns above, please describe the reason below.

Note: If any of these "Information about the concerns" checks is "Yes," the Transaction Screening is basically required. Please consult the officer responsible for YY [to be set forth by each university's export control structure] on the information about the concerns.

5. <Transfer of technologies> Judgment for applying the FEFTA exemptions (public domain/basic science research)

The transaction is transfer of technologies in the public domain.	<input type="checkbox"/> Yes <input type="checkbox"/> No
The technologies will be transferred as a part of the research activities in the field of basic sciences.	<input type="checkbox"/> Yes <input type="checkbox"/> No

Note: "Transfer of technologies in the public domain" means transfer of: 1) technologies already disclosed to the general public via newspapers, books, magazines, brochures or files in an electrical communication network, etc; 2) technologies accessible to the general public through academic journals, public patent information or minutes of open symposiums, etc; 3) technologies accessible or audible to the general public through factory tours, lecture presentations or exhibitions, etc; or, 4) open source programs. If the technologies to transfer include "technologies other than those in the public domain," you may not check "Yes."

Note: "Research activities on basic science fields" means research activities that: 1) mainly aim at identifying principles of phenomena in natural science fields; 2) through theories or experiments; and 3) do not aim to develop or produce certain products. For example, even with "research activities that mainly aim at identifying principles of phenomena in natural science fields" as studies on the cosmic creation process, if the technologies to transfer include a technology used in an activity to design or manufacture a specific product (e.g., experiment or observational equipment), you may not check "Yes."

When either or both of above are checked "Yes," please describe the grounds or reason in this field.

Note: If any aspect of your transaction is found to be questionable, consult the officer responsible for YY [to be set forth by each university's export control structure].

6. Self-check

<Transfer of technologies> Both or either of Item 5 "Judgment for applying the FEFTA exemptions (public domain/basic science research)" is "Yes."	<input type="checkbox"/> Yes <input type="checkbox"/> No
---	--

- 1) If "Yes," no further checks below are basically required. However, since "public domain/basic science research" judgment may not be easy, please submit this check sheet after completing to the officer responsible for YY [to be set forth by each university's export control structure] for his/her verification. Upon inquiries or request from the officer responsible for YY for more information, this field may be changed to "No."
- 2) Even when "Yes" (corresponding to "public domain/basic science research") is checked for this item, please keep in mind that issuance of the "Screening Form" may be required after a cautious review by the officer responsible for YY including inquiries, especially when your check for Item 4 has a "Yes" (concerns exist).

The technologies/goods described in Item 3 apparently are not subject to the List Control (*)	<input type="checkbox"/> Yes <input type="checkbox"/> No
"Yes" is not checked for any of "4. Information about the concerns about the end-user/counterpart" items.	<input type="checkbox"/> Yes <input type="checkbox"/> No

* Check the "Goods/technologies Matrix Table" on the METI website (https://www.meti.go.jp/policy/anpo/matrix_intro.html) for the goods/technologies subject to the List Control.

1) If both are "Yes," please submit this check sheet after completing to the officer responsible for YY [to be set forth by each university's export control structure].

(Upon checking, the officer responsible for YY may contact you for inquiries or request for more information. Issuance of the "Screening Form" may be consequently required.)

2) If both or any of above is "No," issuance of the "Screening Form" is required. Forms and description examples as well as support for preparing the check sheets are available from the officer responsible for YY. Do not hesitate to ask for help.

<p>Upon review of the pre-screening above, the transaction has been determined to be as follows:</p> <div style="display: flex; justify-content: space-between;"> <input type="checkbox"/> Transaction permitted. <input type="checkbox"/> Issuing "Screening Form" is required. </div>	<p style="text-align: right;">[Reviewed by:]</p> <table border="1" style="width: 100%; border-collapse: collapse; margin-top: 10px;"> <tr> <th style="width: 50%; text-align: center;">ECO</th> <th style="width: 50%; text-align: center;">Department</th> </tr> <tr> <td style="height: 40px;"></td> <td style="height: 40px;"></td> </tr> </table>	ECO	Department		
ECO	Department				

Note: Described above is just a reference case and its actual usage is left to management of respective academic or research institute.

Pre-screening Sheet for Accepting Foreigners (International Students, Researchers, Teachers, Visitors)

Date filed: YY /MM /DD

Applicant: Name (in full)

Department/Title

Contact information: Tel

E-mail

Note: For planning acceptance of international students/postgraduates/teaching staff/visitors, etc., filling/submitting this Sheet is always required in advance.

Note: You have to submit this sheet minimum of XX day(s) [to be set forth by each university's control procedure] prior to the acceptance of the foreigner to the officer responsible for YY [to be set forth by each university's export control structure].

1. Person to be accepted

Acceptance category (Please check a corresponding box.)	<input type="checkbox"/> Student [<input type="checkbox"/> Graduate <input type="checkbox"/> Undergraduate <input type="checkbox"/> Postgraduate <input type="checkbox"/> Auditing <input type="checkbox"/> Non-degree <input type="checkbox"/> Other (Description: _____) <input type="checkbox"/> Researcher/teacher [<input type="checkbox"/> Employed (Title: _____) <input type="checkbox"/> Other (Description: _____) <input type="checkbox"/> Visitor <input type="checkbox"/> Other (Description: _____)
Name (in full)	
Country of origin (Nationality)	
Organizational origin(s)	
Classification of specific categories	<input type="checkbox"/> Category 1 <input type="checkbox"/> Category 2 <input type="checkbox"/> Category 3 Classification grounds (_____)
Acceptance schedule	From: YY /MM /DD To: YY /MM /DD

Note: If more than one person is scheduled to accept from the same department of the same organization, please fill in all such persons in the "Name" field.

Note: Please fill in all organizations to which this person has belonged in the "Organizational origin" field.

Note: In the field "Classification of specific categories," write a specific category when the person to be accepted is a resident. In the "Classification grounds" field, write the relevant foreign government or corporation (with its country or region name).

◆ If this person will be accepted to a curriculum of a faculty or with lectures only, or to an art/social science curriculum, no further checks below are basically required. Please submit this check sheet after completing to the officer responsible for YY [to be set forth by each university's export control structure].

Note: However, always remember that a license may be required in a case wherein such a person as undergraduate in a research department shall help a non-publicly-known research, or, synthetic aperture radar shall be carried to a foreign country for such purpose as archaeological or other underground explorations.

2. Predetermined accepting research office and technologies to transfer

Research Division/Department/Laboratory	
Instructors and transferrers of technologies	
Area of research	
Research plan for the person to be accepted	
Description of the technologies to transfer	

Note: If more than one person is scheduled for the instructor or transferrer of technologies, please fill in all such persons in the "Instructors and transferrers of technologies" field.

Note: For convenience in comparing the research areas in which the accepting research office, instructors or transferrers of technologies work with those in the "[Appended Table] Areas of Research in XX Academic/Research Institution Requiring Careful Screening," fill in the "Area of research" field using the same classification as used in the Table.

Note: "Research plan for the person to be accepted" and "Description of the technologies to transfer" must be described as much in detail as possible. If the field provided is not enough, you can attach an exhibit.

3. Information about the concerns about the person to be accepted

The person to be accepted is found in the Foreign End User List (*)	<input type="checkbox"/> Yes <input type="checkbox"/> No
The country of origin of the person to be accepted is one of the Countries of Concern (Iran, Iraq or North Korea) or Countries/regions Under UNSC Arms Embargo (Afghanistan, Central African Republic, Democratic Republic of the Congo, South Sudan, Iraq, Lebanon, Libya, North Korea, Somalia or Sudan)	<input type="checkbox"/> Yes <input type="checkbox"/> No
From the information obtained and such public domain information as on the website, the organizational origin of the person to be accepted (incl. the university/faculty/research office in a case accepting an international student) is suspected to be involved in development, etc., of WMD (nuclear/chemical/biological weapons, rockets/unmanned aerial vehicles) or conventional weapons, or, of technologically advanced materials/parts/products for use therein.	<input type="checkbox"/> Yes <input type="checkbox"/> No
The person to be accepted receives financial support from a foreign institution or organization (including a private company or organ) or has such a plan during the acceptance period.	<input type="checkbox"/> Yes <input type="checkbox"/> No
The person to be accepted plans to join a military-related department or munition company in the future or has such a hope, which is known according to the past communication.	<input type="checkbox"/> Yes <input type="checkbox"/> No
The past research agenda of the person to be accepted are suspected to be for development, etc., of WMD or conventional weapons.	<input type="checkbox"/> Yes <input type="checkbox"/> No
Otherwise, we have other information about the concerns on security export control about the end-user/counterpart or end-use. (If Yes, please describe in the field below.)	<input type="checkbox"/> Yes <input type="checkbox"/> No

* Check the Foreign End User List on the METI website (<https://www.meti.go.jp/policy/anpo/law05.html#user-list>).

If "Yes" is checked for the other information about the concerns above, please describe the reason below.

Note: If any of these "Information about the concerns" checks is "Yes," the Transaction Screening is basically required. Please consult the officer responsible for YY [to be set forth by each university's export control structure] on the information about the concerns.

4. Judgment for applying the FEFTA exemptions (public domain/basic science research)

The transaction is transfer of technologies in the public domain.	<input type="checkbox"/> Yes <input type="checkbox"/> No
The technologies will be transferred as a part of the research activities in the field of basic sciences.	<input type="checkbox"/> Yes <input type="checkbox"/> No

Note: "Transfer of technologies in the public domain" means transfer of: 1) technologies already disclosed to the general public via newspapers, books, magazines, brochures or files in an electrical communication network, etc; 2) technologies accessible to the general public through academic journals, public patent information or minutes of open symposiums, etc; 3) technologies accessible or audible to the general public through factory tours, lecture presentations or exhibitions, etc; or, 4) open source programs. During the whole acceptance period of the person to be accepted, if the education or technologies to transfer potentially include other technologies than "those in the public domain" (including such a case that the accepted person may have access to or view the technologies not "in the public domain" - e.g., study data or publication drafts before publishing - that are available in the laboratory due to the lab's information access control circumstances, in addition to those intentionally educated/provided), you may not check "Yes."

Note: "Research activities on basic science fields" means research activities that: 1) mainly aim at identifying principles of phenomena in natural science fields; 2) through theories or experiments; and 3) do not aim to develop or produce certain products. For example, even with "research activities that mainly aim at identifying principles of phenomena in natural science fields" as studies on the cosmic creation process, if the technologies to transfer potentially include a technology used in an activity to design or manufacture a specific product (e.g., experiment or observational equipment), you may not check "Yes."

When either or both of above are checked "Yes," please describe the grounds or reason in this field.

Note: If any aspect of your transaction is found to be questionable, consult the officer responsible for YY [to be set forth by each university's export control structure].

5. Self-check

Both or either of Item 4 "Judgment for applying the FEFTA exemptions (publicly known/basic science)" is "Yes."	<input type="checkbox"/> Yes <input type="checkbox"/> No
--	--

1) If "Yes," no further checks below are basically required. However, since "public domain/basic science research" judgment may not be easy, please submit this check sheet after completing to the officer responsible for YY [to be set forth by each university's export control structure] for his/her verification. Upon inquiries or request from the officer responsible for YY for more information, this field may be changed to "No."

2) Even when "Yes" (corresponding to "public domain/basic science research") is checked for this item, please keep in mind that issuance of the "Screening Form" may be required after a cautious review by the officer responsible for YY including inquiries, especially when your check for Item 3 has a "Yes" (concerns exist).

No research areas specified in Item 2 "Area of research" field match any of those listed in the "[Appended Table] Areas of Research in XX Academic/Research Institution Requiring Careful Screening" (closely reviewed by each academic/research institution).	<input type="checkbox"/> Yes <input type="checkbox"/> No
None of the Item 3 "Information about the concerns about the person to be accepted" is "Yes."	<input type="checkbox"/> Yes <input type="checkbox"/> No

1) If both are "Yes," please submit this check sheet after completing to the officer responsible for YY [to be set forth by each university's export control structure].

(Upon checking, the officer responsible for YY may contact you for inquiries or request for more information. Issuance of the "Screening Form" may be consequently required.)

2) If both or any of above is "No," issuance of the "Screening Form" is required. Forms and description examples as well as support for preparing the check sheets are available from the officer responsible for YY. Do not hesitate to ask for help.

Upon review of the pre-screening above, the transaction has been determined to be as follows:		[Reviewed by:]
<input type="checkbox"/> Acceptance permitted <input type="checkbox"/> Issuing "Screening Form" is required.	ECO	Department

Note: Described above is just a reference case and its actual usage is left to management of respective academic or research institute.

[Appended Table] Areas of Research in XX Academic/Research Institution Requiring Careful Screening

Category	Sub-Category	Sub-Sub Category	Category	Sub-Category	Sub-Sub Category
B	Solid-state physics	Magnetism, superconductivity, strong correlation relations	E	Physicochemistry, functional solid state chemistry	Basic physicochemistry relations
	Plasma	Nuclear fusion relations			Functional material chemistry relations
	Elementary particle, atomic nucleus, universe physics	Theory of elementary particle, atomic nucleus, cosmic rays, universe physics		Organic chemistry	Structural organic chemistry, physical organic chemistry relations
		Experiment of elementary particle, atomic nucleus, cosmic rays, universe physics			Organic synthetic chemistry relations
C	Material mechanics, production engineering, design engineering	Material mechanics, mechanical material relations	Inorganic and complex chemistry, analytical chemistry		Inorganic and complex chemistry relations
	Hydraulic engineering, thermo-engineering	Hydraulic engineering relations			Analytical chemistry relations
	Mechanical engineering, robotics	Mechanical engineering, mechatronics relations			Green sustainable chemistry, environmental chemistry relations
		Robotics, intelligent machine system relations	Polymer, organic material		Polymer chemistry relations
	Electrical and electronic engineering, electronics	Power engineering relations			Polymer material relations
		Telecommunication engineering relations			Organic functional material relations
		Instrumentation engineering relations	Inorganic material chemistry, energy chemistry		Energy chemistry relations
		Control and system engineering relations	Biomolecule chemistry		Biomolecule chemistry relations
		Electrical and electronic material relations	G	Biology from molecule to cell	Molecular biology relations
		Electronic device and equipment relations			Structural biochemistry relations
	Aerospace engineering, marine engineering	Aerospace engineering relations			Functional biochemistry relations
		Marine engineering relations			Biophysics relations
D	Material engineering	Metallic material properties relations	Biology from cell to individual		Cellular biology relations
		Inorganic material and physical properties relations			Developmental biology relations
		Structural and functional materials relations	H	Pathophysiology, infection immunology	Virology relations
		Material machining, microstructural control relations			Immunology relations
	Nano-micro science	Nano-structural chemistry relations	J	Information science, information engineering	Computer system relations
		Nano-structural physics relations			Software relations
		Nano-material science relations			Information network relations
		Nanobioscience relations			Information security relations
		Nano-micro system relations			High-performance computing relations
	Applied physics	General applied physics relations	K	Environmental analysis and assessment	Radiation influence relations
	Nuclear engineering, earth resource engineering, energetics	Nuclear engineering relations			Chemical substance effect relations

Note: The research area classification in this table is organized referring to the "Review Classification Table of the Project of the Grants-in-Aid for Scientific Research," and can be customized to each academic/research institution's need for most convenient use.

Note: Though this table picks up the research areas that could be in relatively high association with the items subject to the List Control, research in other areas may be subject to the List Control. Also, some of the research in the areas listed above may not be subject to the List Control. Leveraging this table and using the list closely reviewed by each academic/research institution should be useful to the "sensitivity management (Noutan Kanri)" that allows to use a different screening process for a non-subject research area.

Note: This table will be revised continuously.

Pre-screening Sheet for Accepting Specific-category Persons (Students, Researchers, Teachers, and Visitors except Foreigners)

Date filed: YYYY/MM/DD

Applicant: Name (in full)

Department/Title

Contact information: Tel

E-mail

Note: When working on the acceptance of specific-category students, researchers, teachers, or visitors other than foreigners, be sure to fill out and submit this sheet beforehand.

Note: Submit this sheet to the person in charge of XX (to be set forth by each university's control procedure) until X days before acceptance (to be set forth by each university's export control structure).

1. Person to be accepted

Accepting category (Check proper one)	<input type="checkbox"/> Student (<input type="checkbox"/> Graduate <input type="checkbox"/> Undergraduate <input type="checkbox"/> Postgraduate <input type="checkbox"/> Auditor <input type="checkbox"/> Non-degree <input type="checkbox"/> Other () <input type="checkbox"/> Researcher or teacher (<input type="checkbox"/> Employed (Title:) <input type="checkbox"/> Other () <input type="checkbox"/> Visitor <input type="checkbox"/> Other ()
Name (in full)	
Organizational origin	
Classification of specific categories	<input type="checkbox"/> Category 1 <input type="checkbox"/> Category 2 <input type="checkbox"/> Category 3 Classification grounds ()
Acceptance schedule	From YYYY/MM/DD to YYYY/MM/DD

Note: If accepting two or more persons from the same department of the same organization, write all names in the "Name" field.

Note: In the "Organizational origin" field, write all the organizations that the person to be accepted has belonged to.

Note: In the "Classification grounds" field, write the relevant foreign government or corporation (with its country or region name).

If the person to be accepted has only a undergraduate or lecture course, or one related to human and social science, it is unnecessary to fill in the following fields. Submit this sheet to the person in charge of XX (to be set forth by each university's export control structure).

Note: A license may be necessary in some cases: the undergraduate student supports publicly unknown research in the laboratory or a synthetic aperture radar is brought overseas for archaeological underground sensing.

2. Accepting laboratory and technology to be transferred

Research division/department/laboratory	
Instructor/provider of technology	
Research area	
Research plan for the person to be accepted	
Description of the technology to transfer	

Note: If multiple instructors or technology providers are planned, write all the names and titles in the "Instructor/technology provider" field.

Note: In the "Research area" field, write the name of research area in which the accepting laboratory, instructor, or technology provider studies, so that the entry can be compared with "[Appended Table] Areas of Research in XX Academic/Research Institution Requiring Careful Screening" by using the classification method of this table.

Note: In the fields "Research plan for the person to be accepted" and "description of the technology to transfer," fill in as concretely as possible. If the space is insufficient, attach an additional sheet.

3. Information about concerns about the person to be accepted

The organizational origin of the person to be accepted is shown in the foreign end-user list*.	<input type="checkbox"/> Yes <input type="checkbox"/> No
The country where the organizational origin of the person to be accepted exists is one of the Countries of Concern (Iran, Iraq, or North Korea) or a UN arms-embargoed country or region (Afghanistan, Central African Republic, Congo, Iraq, Lebanon, Libya, North Korea, Somalia, South Sudan, or Sudan).	<input type="checkbox"/> Yes <input type="checkbox"/> No
The organizational origin of the person to be accepted (including graduating university, department, laboratory,) is suspected of involvement in the development of WMD (nuclear, chemical, or biological weapon, rocket, or unattended airplane), conventional weapons, or advanced materials, parts, or products used for any weapon according to the public information such as website and obtained information.	<input type="checkbox"/> Yes <input type="checkbox"/> No
The person to be accepted receives financial support from a foreign institution or organization (including a private company or organ) or has such a plan.	<input type="checkbox"/> Yes <input type="checkbox"/> No
The person to be accepted plans to join a military-related department or munition company overseas in the future or has such a hope, which is known according to the past communication.	<input type="checkbox"/> Yes <input type="checkbox"/> No
The past research the person to be accepted conducted is suspected to be related to the development of WMD or conventional weapons.	<input type="checkbox"/> Yes <input type="checkbox"/> No
The end-user or end-use has cause-of-concern information about security export control. (If yes, fill in the following box.)	<input type="checkbox"/> Yes <input type="checkbox"/> No

* For the foreign end-user list, see that appearing on the website of METI (<https://www.meti.go.jp/policy/ampo/law05.html#user-list>).

If "Yes" is checked in the last concern above, describe the reason here.

Note: If "Yes" is checked in any concern above, careful screening is necessary in principle, so consult the person in charge of XX (to be set forth by each university's export control structure).

4. Whether FEFTA exceptions applies (public knowledge and basic science)

The transaction is transfer of publicly known technology.	<input type="checkbox"/> Yes <input type="checkbox"/> No
The technology to be transferred is developed by research activities in the basic science area.	<input type="checkbox"/> Yes <input type="checkbox"/> No

Note: The transfer of publicly known technology includes that of (i) technology already disclosed to an unspecified large number of people via newspapers, books, magazines, catalogs, or files over telecommunication networks, (ii) technology available to an unspecified large number of people through journals, disclosed patent information, or the minutes of open symposiums, (ii) technology available or able-to-attend to an unspecified large number of people in tours of factories, lectures, or exhibitions, and (iv) programs whose source codes are disclosed. The Yes box cannot be checked if the technology to be used for education or transfer purposes includes other than public knowledge over the accepting period of the person to be accepted (for example, intentional use for education or provision, or the case where the person concerned can get or see other than public knowledge at the laboratory (e.g. unpublished research data or drafts) because of the information access control in the laboratory).

Note: The research activities in the basic science field refer to ones (i) whose main purpose is to find the principle of a phenomenon in the natural science area, (ii) with theoretical or experimental means, or (iii) whose purpose is not to design or manufacture certain products. The Yes box cannot be checked, for example, even if like universe forming research, the main purpose is to find out the principle of phenomena in the natural science area, the technology to be used for education or transfer includes that used in research activities whose key purpose is to design or manufacture a certain product (e.g., experimental equipment, observational equipment) over the accepting period of the person concerned.

If "Yes" is checked in either or both of the exceptions above, write the grounds here.

Note: If having questions, consult the person in charge of XX (to be set forth by each university's export control structure).

5. Self-check

In "4. Whether FEFTA exceptions applies (public knowledge and basic science)," the Yes box is checked in either or both of the exceptions.	<input type="checkbox"/> Yes <input type="checkbox"/> No
--	--

1) In the case of Yes, it is unnecessary to fill in the following box in principle. However, since the judgment of public knowledge and basic science may not be easy, submit this sheet to the person in charge of XX (to be set forth by each university's export control structure) to receive checks. As a result of inquiries and requests for providing more detailed information from the person in charge, Yes may be changed to No in this box.

2) Care must be taken that even if Yes (public knowledge and basic science apply) is chosen in this box and the table of Section 3 has Yes (which means that there is a concern), the person in charge may make inquiries and conduct careful screening, resulting in the possibility of filing out the screening form.

The entry of the "Research area" field of Section 2 does not include any of "[Appended Table] Areas of Research in XX Academic/Research Institution Requiring Careful Screening" (<i>precise research areas given by universities and research institutes</i>).	<input type="checkbox"/> Yes <input type="checkbox"/> No
The Yes box is not checked in any of "3. Information about concerns about the person to be accepted."	<input type="checkbox"/> Yes <input type="checkbox"/> No

1) If both Yes boxes are checked, submit this sheet to the person in charge of XX (to be set forth by each university's export control structure).

(During inspection, the person in charge may deliver inquiries and requests for more detailed information to the submitter, resulting in the possibility of issuing the screening form.)

2) If either or both of the No boxes are checked, it is necessary to issue the screening form. Since the person in charge has the form and filling examples, and can give support, consult him/her.

Upon review of the pre-screening above, the transaction has been determined as follows:						
		(Box to be checked by the person in charge)				
<input type="checkbox"/> Acceptance permitted	<input type="checkbox"/> Issuing "Screening Form" is required	<table border="1"> <tr> <th>ECO</th> <th>Department</th> </tr> <tr> <td></td> <td></td> </tr> </table>	ECO	Department		
ECO	Department					

Note: This sheet is an example, so the actual usage is left to each university or research institute.

Appended Table (omitted) (same as one on page 113)

Screening Form (for Transfer of Technologies and Export of Goods)

Date created: YY /MM /DD

ROEC	ECO	Department	Prepared by

1. Outline of the transfer of technologies and export of goods

Subject (description)	
Name of the technologies/goods (Value): _____	
Classification (Category 1 through 15)	<div style="font-size: small;"> <Technologies> Appended Table of the Foreign Exchange Order: Category Item <input type="checkbox"/> Subject <input type="checkbox"/> Non-subject <input type="checkbox"/> Unclear/questionable (Ministerial Order*: Article Category Item) <input type="checkbox"/> Public domain <input type="checkbox"/> Basic science research <input type="checkbox"/> Exemptions </div> <div style="font-size: small;"> <Goods> Appended Table 1 of the Export Trade Control Order: Section Item <input type="checkbox"/> Subject <input type="checkbox"/> Non-subject <input type="checkbox"/> Unclear/questionable (Ministerial Order*: Article Section Item) <input type="checkbox"/> Low value exemptions <input type="checkbox"/> Unregulated </div> <div style="font-size: x-small;"> Reason of the judgment above Note: Especially when a box other than "Subject" is checked, describe the reason as much in detail as possible according to the actual technologies/goods to transfer/export. </div>
	Destination (nation): <input type="checkbox"/> "Preferred trade partner list countries" <input type="checkbox"/> Country/region Under UNSC Arms Embargo <input type="checkbox"/> Country of concern <input type="checkbox"/> Others
	<div style="display: flex;"> <div style="width: 10%; font-size: small;">Counter party of the agreement</div> <div style="width: 90%;"> <div style="font-size: small;">Name (English) Note: Fill in the URL () and/or attach documents. <input type="checkbox"/> New <input type="checkbox"/> Repeat <input type="checkbox"/> Military-related</div> <div style="font-size: small;">Location/address</div> <div style="font-size: small;">Classification <input type="checkbox"/> Non-resident <input type="checkbox"/> Specific-category person (<input type="checkbox"/> Category 1 <input type="checkbox"/> Category 2 <input type="checkbox"/> Category 3) Classification grounds ()</div> </div> </div>

Note: Described above is just a reference case and its actual usage is left to management of respective academic or research institute.

Screening Form (for Accepting Foreigners: International Students, Researchers, Teachers, Visitors, or Specific-category Persons)

Date created: YY /MM /DD

ROEC	ECO	Department	Prepared by

1. Description of the technologies to educate/transfer to the person to be accepted

Person to be accepted	Name in full (English)	
	Country of origin	<input type="checkbox"/> Preferred trade partner list countries <input type="checkbox"/> Country/region Under UNSC Arms Embargo <input type="checkbox"/> Country of concern <input type="checkbox"/> Others
	Organizational origin(s)	Note: Fill in the URL () and/or attach documents.
	Specific-category classification	<input type="checkbox"/> Category 1 <input type="checkbox"/> Category 2 <input type="checkbox"/> Category 3 Classification grounds ()
Classification of the technologies to educate/transfer (Category 1 through 15)	Appended Table of the Foreign Exchange Order: Article Paragraph Item (Ministerial Order*: Article Paragraph Item) Note: Describe all corresponding item numbers if there are more than one item that could be subject. <input type="checkbox"/> Subject <input type="checkbox"/> Non-subject <input type="checkbox"/> Unclear/questionable <input type="checkbox"/> Public domain <input type="checkbox"/> Basic science research <input type="checkbox"/> Others, non-regulated	
	Reason of the judgment above Note: Especially when other boxes than "Subject" are checked, describe the reason as much in detail as possible according to the research plan for the person to be accepted and the technologies/goods to transfer/export.	
Post-graduation plans/workplace of choice (if available)	Name (English)	Note: Fill in the URL () and/or attach documents.
	Location/address	
End-use of the technologies to transfer [End-use in the post-graduation plans/workplace of choice, for students] (if available)	Description () <input type="checkbox"/> WMD-related <input type="checkbox"/> Conventional weapons-related <input type="checkbox"/> Military force-related <input type="checkbox"/> Unclear/questionable <input type="checkbox"/> Others	
	Documents available? <input type="checkbox"/> Yes () <input type="checkbox"/> No	
"Objective" condition	I. WMD Catch-all Control: If the country/organization of origin or the post-graduation plans/workplace of choice of the person to be accepted is other than non-Preferred trade partner list countries (incl. Countries/regions Under UNSC Arms Embargo), check the following in light of the WMD Catch-all Control: i. Any item in the "End-use" Check Sheet is checked "Yes"? <input type="checkbox"/> Yes <input type="checkbox"/> No ii. Any item in the "End-user" Check Sheet is checked "Yes"? <input type="checkbox"/> Yes <input type="checkbox"/> No iii. (If "Yes" is checked with 2.) Any item in the " Apparent" Guideline is checked "No"? <input type="checkbox"/> Yes <input type="checkbox"/> No	
	II. Conventional Weapons Catch-all Control: If the country/organization of origin or the post-graduation plans/workplace of choice of the person to be accepted is one of the Countries/regions Under UNSC Arms Embargo, check the following in light of the Conventional Weapons Catch-all Control: i. Any item in the "End-use" Check Sheet is checked "Yes"? <input type="checkbox"/> Yes <input type="checkbox"/> No ii. (If item 1 is "Yes,") Any item in the end-use condition in the bottom field of the "End-use" Check Sheet is checked "Yes"? <input type="checkbox"/> Yes <input type="checkbox"/> No	
	III. Any unclear or questionable matter for verification of the "Objective" condition? <input type="checkbox"/> Yes <input type="checkbox"/> No	
"Informed" condition	Were you informed by the Minister of Economy, Trade and Industry that license application is required for the post-graduation plans/workplace of choice <input type="checkbox"/> Yes <input type="checkbox"/> No	
Acceptance schedule	From: YY /MM /DD To: YY /MM /DD	

2. Final judgment for acceptance (Date of judgment: YY /MM /DD)

2. Final judgment for acceptance (Date of judgment: ____/____/____)				
Acceptance screening result	<input type="checkbox"/> Approved <input type="checkbox"/> Conditionally approved	<input type="checkbox"/> Non-regulated	<input type="checkbox"/> Non-subject	<input type="checkbox"/> Exemption (public domain/basic science research, etc.)
	<input type="checkbox"/> Notify/consult METI <input type="checkbox"/> Disapproved			
Conditions for the acceptance approval				
Reasons for judgment				

* Ministerial Order Specifying Goods and Technologies Pursuant to the Provisions of the Appended Table 1 of the Export Trade Control Order and the Appended Table of the Foreign Exchange Order

Note: Described above is just a reference case and its actual usage is left to management of respective academic or research institute.

"End-use" Check Sheet

Verify whether or not the following could be potential end-uses, using information such as on the website or brochures. (Circle Yes or No.)

Development, manufacture, use or storage of nuclear weapons		Yes / No
Development, manufacture, use or storage of chemical warfare agents		Yes / No
Development, manufacture, use or storage of bacterial warfare agents		Yes / No
Development, manufacture, use or storage of the equipment for transportation of chemical/bacterial warfare agents		Yes / No
Development, manufacture, use or storage of the rockets with transportation distance over 300km		Yes / No
Development, manufacture, use or storage of the unmanned aerial vehicles with transportation distance over 300km		Yes / No
Appended Table activities	i. Development, manufacture, use or storage of nuclear fuel materials or nuclear source materials	Yes / No
	ii. Research on nuclear fusion	Yes / No
	iii. Development, manufacture, use or storage of nuclear reactors or components thereof	Yes / No
	iv. Deuterium water production	Yes / No
	v. Nuclear fuel materials processing	Yes / No
	vi. Nuclear fuel reprocessing	Yes / No
	vii. Either of the following that is apparently conducted by or under entrustment from a government body administering the military or national defense affairs: a. Development or manufacture of chemical substances b. Development, manufacture, use or storage of microbes or toxins c. Development, manufacture, use or storage of the rockets or unmanned aerial vehicles d. Space research	Yes / No
Development, manufacture or use of conventional weapons (that is a good described in the middle field of the Appended Table 1 of the Export Trade Control Order, excluding those related to WMD) destined for a region designated in the Appended Table 3-2 of the Export Trade Control Order		Yes / No

If "Yes" is chosen for the final item, be sure to check the following as well.

Exception of the end-use conditions	i. The goods designated in the appended tables (*) that are developed, or otherwise, using the goods/technologies to be screened, are stated/recorded in a document or other media that these goods will be provided for industrial, entertainment, sports, hunting or life-saving uses. In addition, you have been informed by the importers that the goods specified by the exporters in the said tables will be used for such uses.	Yes / No
	ii. Goods/services are exported or transferred to protect Japanese residents abroad as per the Self-Defense Force Act (SDFA).	Yes / No
	iii. Goods /services are exported or transferred to transport Japanese residents abroad as per SDFA.	Yes / No
	iv. Goods/services are exported or transferred to transport guests of the nation as per the SDFA.	Yes / No
	v. Japan's Self-Defense Force exports or transfers goods or services to the US, Australian, UK, French, Canadian, Indian or German armed forces as per SDFA.	Yes / No
	vi. Goods/services are exported/provided for use in the International Disaster Relief Activities pursuant to the Act concerning Dispatch of Japan Disaster Relief Team.	Yes / No
	vii. Goods/services are exported/provided for use the International Peace Cooperation Assignments pursuant to the Act on Cooperation with United Nations Peacekeeping Operations and Other Operations.	Yes / No
	viii. Goods/services are exported or transferred for backup logistic support, search, and rescue activities as per the Act for Measures for Keeping Japan's Peace and Security against Situations with Important Influences.	Yes / No
	ix. Goods/services are exported or transferred for ship inspection activities as well as logistics support operations and cooperative support activities along with its implementation as per the Act for Vessel Inspection Operations against Situations with Important Influences.	Yes / No
	x. Japan's Self-Defense Force exports or transfers goods or services as an action based on the Act for Japan's Measures along with US Military's Action against the Situations of Armed Attack and Existence Crisis.	Yes / No
	xi. Goods/services are exported or transferred for stopped ship inspection and return as per the Act for the Maritime Transportation Control of Foreign Military Supplies against the Situations of Armed Attack and Existence Crisis.	Yes / No
	xii. Goods/services are exported or transferred for pirate measures as per the Act for Punishment and Measures for Piracy.	Yes / No
	xiii. Goods/services are exported or transferred for cooperative support, search, and rescue activities as per the Act for Japan's Cooperative Support Activities to Foreign Militaries in the Situation of Internationally United Peace Protection.	Yes / No
	xiv. Goods/services are exported or transferred to respond to changes in situation, such as information collection action taken by Japan's Self-Defense Force and the occurrence of unexpected issues as per the Cabinet decision "Government's Actions for Keeping the Safety of Japan-related Ships in the Middle East" on December 27, 2019.	Yes / No

* Appended tables: 1. Firearms or ammunition therefor (including those used in the emission of light or smoke) of the following, or parts thereof:

1) Air guns, shotguns, rifles, harquebuses or ammunition therefor; or

2) life-saving guns, harpoon guns, rivet guns or other guns for similar industrial uses or ammunition therefor.

2. Torpedoes for industrial use

3. Explosives for industrial use or initiating devices thereof

Note: Described above is just a reference case and its actual usage is left to management of respective academic or research institute.

"End-user" Check Sheet

i. End User List check

(Circle Yes or No.)

The demander/end-user is found in the Foreign End User List	Yes / No
---	----------

ii. End-user condition check

Verify whether or not that information to reveal that the demander/end-user is conducting or have conducted either of the following activities is stated/recorded on the website or in a document or other media obtained, or, your counterpart so informed you:

Circle Yes or No.)

Development, manufacture, use or storage of nuclear weapons	Yes / No
Development, manufacture, use or storage of chemical warfare agents	Yes / No
Development, manufacture, use or storage of bacterial warfare agents	Yes / No
Development, manufacture, use or storage of the equipment for transportation of chemical/bacterial warfare agents	Yes / No
Development, manufacture, use or storage of the rockets with transportation distance over 300km	Yes / No
Development, manufacture, use or storage of the unmanned aerial vehicles with transportation distance over 300km	Yes / No

Note: Described above is just a reference case and its actual usage is left to management of respective academic or research institute.

The Guideline Sheet for Judging " Apparent" ("Apparent" Guideline Sheet)

Check the following items.

If the statement is not relevant to the transaction type, circle "N/A" (not applicable).

End-uses/specifications of the goods	1. End-uses of such goods are distinctively explained by the importer/demandor or agents thereof.	Yes	No	N/A
	2. There exists a rational reason for needing such goods in the context of demandor/end-user's business and/or level of the technology.	Yes	No	N/A
Conditions for installation (space/location, mounting, etc.) of the goods	3. The space/location for installation and/or use is distinctively explained.	Yes	No	N/A
	4. We do not have any information telling us that the installation/end-use place of the goods is in an area requiring high confidentiality such as inside or adjacent to a military facility or of restricted access, and that the end-use leaves a trace of doubt.	Yes	No	N/A
	5. Excessive safety gear/measures are not requested for transfer/installation of the goods.	Yes	No	N/A
Conditions/specifications of related facilities/equipment for the goods	6. The facility for use of the goods or raw materials to be handled together is explained.	Yes	No	N/A
	7. Combination of the goods and the facilities for use of the goods or raw materials to be handled together is reasonable and consistent in light of the end-use of the goods.	Yes	No	N/A
	8. Unusually excessive volume of spare parts, etc. have not been requested.	Yes	No	N/A
	9. Related equipment that is normally necessary has been requested.	Yes	No	N/A
Labeling, shipment and packaging specifications	10. No special order for labeling and shipment for transportation has been placed.	Yes	No	N/A
	11. The transportation route is quite normal considering the goods and destination.	Yes	No	N/A
	12. The packaging for transportation and labeling for the package is quite normal considering the goods and destination.	Yes	No	N/A
Conditions for the price payment/warranty of the goods	13. Excessively favorable offer has not been made for the payment value/terms/method.	Yes	No	N/A
	14. Performance warranty to a normal extent has been requested.	Yes	No	N/A
Manner of installation refusal and confidentiality keeping	15. Normally expected dispatch of experts for installation and instruction has been requested.	Yes	No	N/A
	16. Confidentiality of the final destination or the end-product has not been requested to an excessive extent.	Yes	No	N/A
Company/organization in the End User List	17. For a transaction with a company/organization in the Foreign End User List, the "Type of WMD (nuclear/biological/chemical weapons and missiles)" does not match the type of concerned end-use of the goods to export (to be judged from characteristics of the goods to be exported by reference to the Commodity Watch List for WMD Catch-All).	Yes	No	N/A
	18. For a transaction with a company/organization in the Foreign End User List, any military use of the goods/technologies to export/transfer is neither stated nor recorded in an export (transaction) contract or document, drawing or electromagnetic record acquired by an exporter, and/or is not informed by an importer, an end-user or its agency.	Yes	No	N/A
Others	19. Additionally, there are no such questionable aspects in the transaction that a question about things that the demandor/end-user is obviously supposed to answer based on the business practice have not been answered.	Yes	No	N/A

Note: For transfer of technologies or acceptance of foreigners, please replace terms used above to relevant words as necessary. For example, replace the "importer" with the "counterparty" or the "person to be accepted."

Note: Described above is just a reference case and its actual usage is left to management of respective academic or research institute.

Classification Form

Date created: YY /MM /DD

Responsible applicant: Name (in full)

Department/Title

Contact information: Tel

E-mail

Name of the technologies and outline of the transaction Name, type and grade of the goods	
--	--

Category number in the appended Table of the Foreign Exchange Order (in the case of transfer of technology) or the appended Table 1 of the Export Trade Control Order (in the case of export of goods)		
1	Subject	Non-subject
2	Subject	Non-subject
3	Subject	Non-subject
3-2	Subject	Non-subject
4	Subject	Non-subject
5	Subject	Non-subject
6	Subject	Non-subject
7	Subject	Non-subject
8	Subject	Non-subject
9	Subject	Non-subject
10	Subject	Non-subject
11	Subject	Non-subject
12	Subject	Non-subject
13	Subject	Non-subject
14	Subject	Non-subject
15	Subject	Non-subject
	More than one section is "Subject."	All categories are "Non-subject."

Note: Circle "Subject" or "Non-subject" for each item, cross-checking the description/performance of the technology or goods with the regulations (the Appended Table of the Foreign Exchange Order, the Appended Table 1 of the Export Trade Control Order, the Ministerial Order Specifying Goods and Technologies Pursuant to the Provisions of the Appended Table 1 of the Export Trade Control Order and the Appended Table of the Foreign Exchange Order, and the Notifications of Interpretation and Goods/Technologies Integrated Matrix Table (see the following link).

https://www.meti.go.jp/policy/anpo/matrix_intro.html

Note: For sections with "Subject" circled, compare the technology or goods specification (performance) with the relevant fields of the Ministerial Order Specifying Goods and Technologies Pursuant to the Provisions of the Appended Table 1 of the Export Trade Control Order and the Appended Table of the Foreign Exchange Order and the Notifications of Interpretation, and clearly specify the reasons why you judged them to be "Subject" in the exhibit "List of Correspondence."

Note: For sections with "Non-subject" circled as well, if close to be "Subject" based on the technical nature of the technology or goods, compare the specification (performance) of the technology or goods with the relevant fields of the Ministerial Order Specifying Goods and Technologies Pursuant to the Provisions of the Appended Table 1 of the Export Trade Control Order and the Appended Table of the Foreign Exchange Order and the Notifications of Interpretation, and clearly specify the reasons why you judged them to be "Non-subject" in the exhibit "List of Correspondence."

As above, this technology or goods is / is not subject to the Appended Table (excluding Category 16) of the Foreign Exchange Order or the Appended Table 1 of the Export Trade Control Order.

The correspondence between the specification (performance) of this technology or goods and relevant categories/fields in the Foreign Exchange Order/ the Export Trade Control Order, the Ministerial Order Specifying Goods and Technologies Pursuant to the Provisions of the Appended Table 1 of the Export Trade Control Order and the Appended Table of the Foreign Exchange Order, and the Notifications of Interpretation is shown by the List of Correspondence.

Note: This format is published to show an example format of subject/non-subject judgment for filing the application. Those who have already obtained a license using another format in the past may as well use that same format for new applications and do not have to replace with this one.

Note: Described above is just a reference case and its actual usage is left to management of respective academic or research institute.

and the Specification (Performance) of the technology/goods

The correspondence between the specification (performance) of this technology/goods and relevant categories/fields in the Foreign Exchange Order/the Export Trade Control Order, the Ministerial Order Specifying Goods and Technologies Pursuant to the Provisions of the Appended Table 1 of the Export Trade Control Order and the Appended Table of the Foreign Exchange Order, and the Notifications of Interpretation is shown as follows:

Appended Table of the Foreign Exchange Order or the Appended Table 1 of the Export Trade Control Order		Ministerial Order Specifying Goods and Technologies Pursuant to the Provisions of the Appended Table 1 of the Export Trade Control Order and the Appended Table of the Foreign Exchange Order		Notifications of Interpretation	Specification (Performance) of the technology/goods
Category number	Item	Category number	Item		
<div style="border: 1px solid black; padding: 10px; margin: 10px auto; width: 80%;"> <p>For details about the regulations, see "Filing a license application - 1" on the website.</p> </div>					
<div style="border: 1px solid black; padding: 10px; margin: 10px auto; width: 80%;"> <p>Describe performance corresponding to the regulation.</p> </div>					

Classification of the technology/goods ☐ Subject ☐ Non-subject

Note: In filling this form, be sure to satisfy the following:

- Clarify the correspondence of the specification (performance) of the technology/goods for each item in the relevant categories/fields in the Foreign Exchange Order/ the Export Trade Control Order, the Ministerial Order Specifying Goods and Technologies Pursuant to the Provisions of the Appended Table 1 of the Export Trade Control Order and the Appended Table of the Foreign Exchange Order, and the Notifications of Interpretation.
- In particular, specific determining (subject/non-subject) values must be so described that the relationship between the values of the technology/goods and the standard is clarified.
- Documents that describe such aspects as the specification (performance) of the technology/goods must be attached.

Note: Described above is just a reference case and its actual usage is left to management of respective academic or research institute.

[Description Example] "Technology for thermal decomposition and vapor deposition"

[Classification Form Exhibit] List of Correspondence between Related Categories
in the Foreign Exchange Order/ the Export Trade Control Order
and the Specification (Performance) of the technology/goods

The correspondence between the specification (performance) of this technology/goods and relevant categories/fields in the Foreign Exchange Order/the Export Trade Control Order, the Ministerial Order Specifying Goods and Technologies Pursuant to the Provisions of the Appended Table 1 of the Export Trade Control Order and the Appended Table of the Foreign Exchange Order, and the Notifications of Interpretation is shown as follows:

Appended Table of the Foreign Exchange Order or the Appended Table 1 of the Export Trade Control Order		Ministerial Order Specifying Goods and Technologies Pursuant to the Provisions of the Appended Table 1 of the Export Trade Control Order and the Appended Table of the Foreign Exchange Order		Notifications of Interpretation	Specification (Performance) of the technology/goods
Category number	Item	Category number	Item		
Category 4 (v)	Technology specified by Order of the Ministry of Economy, Trade and Industry and employed in the use of equipment used in fixing substances generated from the thermal decomposition of gas onto substrates	Article 16 Paragraph (5)	The technology specified by Order of the Ministry of Economy, Trade and Industry in Category 4-(v) in the Appended Table of the Foreign Exchange Order, shall be the technology used in fixing substances generated from the thermal decomposition of gas (limited to those performed in the temperature range between 1,300 and 2,900 degrees Celsius and the absolute pressure range between 130 and 20,000 pascals) onto substrates.		<p>- The temperature is between 2,000 and 2,500 degrees [Celsius]</p> <p>- The absolute pressure is between 15,000 and 20,000 pascals</p> <p>The technology is used in fixing substances generated from the thermal decomposition of gas onto substrates under the conditions above.</p> <p>Therefore, it is classified as "Subject."</p>

Date: Year Month Day

Pledge

To:

(Name of person responsible for acceptance)

Full name: _____

(Signature) _____

I hereby pledge to comply with the following items regarding my enrollment to or employed or any as such by ●●● University.

1. During enrollment or employment or any as such at ●●● University, I will neither provide nor carry out any property belonging to the University without a permission. In any of the following cases, I will consult my supervisor (i.e., the academic staff accepting me as a student or a researcher) and, if necessary, take the prescribed procedures based on the Foreign Exchange and Foreign Trade Act, related laws and regulations, and the internal regulations of the University.
 - (1) In the case that I intend to provide technical information related to a research to a foreign country or to a non-resident or a resident under the significant influence of a non-resident (i.e., a person falling under the “Specific Categories”) during this period, or in the case that it becomes clear during this period that I will provide such information after leaving the University.
 - (2) In the case that I intend to export (send, take abroad, etc.) research equipment, materials used in research, or tangible objects by a research during this period, or in the case that it becomes clear during this period that I will export these items after leaving the University.
2. I will not use the technical information obtained by a research for the development, production, use, or storage of weapons of mass destruction (WMD) (nuclear weapons, chemical weapons, biological weapons, WMD delivery systems such as missiles, and unmanned aerial vehicles, conventional weapons, or materials, components, or products used in these weapons. I will use such technical information only for civil purposes.

※ Regarding to the “Specific Categories”, please refer to Page 4 of

https://www.meti.go.jp/policy/ampo/law_document/minashi/en_daigaku.pdf.

※ This sheet is an example of the pledge certificate upon graduation or retirement, so the actual usage is left to each university or research institute.

Pledge

To:

(Name of person responsible for acceptance)

Full name: _____

(Signature) _____

I hereby pledge to comply with the following items regarding my graduation from or leaving ●●● University.

1. After graduation from or leaving ●●● University, in any of the following cases, and if necessary, I will take the prescribed procedures based on the Foreign Exchange and Foreign Trade Act, related laws and regulations.
 - (1) In the case that I intend to provide technical information related to a research provided by the University to a foreign country or to a non-resident or a resident under the significant influence of a non-resident (i.e., a person falling under the “Specific Categories”).
 - (2) In the case that I intend to export (send, take abroad, etc.) research equipment, materials used in research, or tangible objects by a research provided by the University.
2. I will not use the technical information obtained by a research for the development, production, use, or storage of weapons of mass destruction (WMD) (nuclear weapons, chemical weapons, biological weapons, WMD delivery systems such as missiles, and unmanned aerial vehicles, conventional weapons, or materials, components, or products used in these weapons. I will use such technical information only for civil purposes.

※ Regarding to the “Specific Categories”, please refer to Page 4 of

https://www.meti.go.jp/policy/anpo/law_document/minashi/en_daigaku_.pdf

※This sheet is an example of the pledge certificate, so the actual usage is left to each university or research institute.

Reference: Specific Categories

Note: Use this reference when it is necessary to describe the specific categories upon signature put to the pledge certificate.

The “Specific Categories” stands for the following categories (1) to (3).

- (1) A Person who has entered into an employment contract, a delegation contract, a service contract, or any other contract with a corporation or any other organization established under the foreign laws and regulations (except for its branch offices, local offices or other offices in Japan, hereinafter referred to as a "Foreign Corporation"), or a foreign government, a foreign governmental agency, a foreign local government, a foreign central bank, a foreign political party or any other political organization (hereinafter referred to as a "Foreign Government") and is subject to the direction and order of the Foreign Corporation or the Foreign Government, or owes the duty of care of a good manager to the Foreign Corporation or the Foreign Government, according to the contract, except for either of the following cases.
 - (a) In the case where the Person has entered into an employment contract, a delegation contract, a service contract, or any other contract with a Japanese corporation and is subject to the direction and order of the Japanese corporation or owes the duty of care of a good manager to the Japanese corporation, according to the contract, the Japanese corporation or the Person has agreed with the Foreign Corporation or the Foreign Government that the direction and order of the Japanese corporation or the duty of care of a good manager to the Japanese corporation shall prevail over the direction and order of the Foreign Corporation or the Foreign Government, or the duty of care of a good manager to the Foreign Corporation or the Foreign Government.
 - (b) In the case where the Person has entered into an employment contract, a delegation contract, a service contract, or any other contract with a Japanese corporation and is subject to the direction and order of the Japanese corporation or owes the duty of care of a good manager to the Japanese corporation, according to the contract, the Person has entered into an employment contract, a delegation contract, a service contract or any other contract with a Group Foreign Corporation (a Foreign Corporation that directly or indirectly holds 50% or more of the voting rights of the Japanese corporation or a Foreign Corporation of which 50% or more of the voting rights are held by the Japanese corporation. The same shall apply hereinafter.) and is subject to the direction and order of the Group Foreign Corporation or owes the duty of care a good manager to the Group Foreign Corporation, according to the contract.
- (2) A Person who earns or agrees to earn a large amount of money or other significant profit (money or other profit that accounts for 25% or more of the Person’s annual income when converted into money) from a Foreign Government.
- (3) A Person who acts in Japan under instructions or requests of a foreign government.

Confirmation Letter regarding the Applicability of the Specific Categories for Compliance
with Article 25 (1) and (2) of the Foreign Exchange and Foreign Trade Act

To: _____

Date: _____

Address: _____

Name: _____

I understand when [INSERT ENTITY NAME] transfers technology to a resident who falls under the clauses 1(3)サ① or ② of the "Notification for Transactions or Acts of Transferring Technology Requiring Permission pursuant to Article 25 (1) of the Foreign Exchange and Foreign Trade Act and Article 17 (2) of the Foreign Exchange Order" (Document No. 492 of the Trade Bureau published on December 21, 1992; hereinafter referred to as the "Notification for Technology Transfer"), [INSERT ENTITY NAME] is likely to be required to obtain a license from the Minister of Economy, Trade, and Industry pursuant to Article 25 (1) and (2) of the Foreign Exchange and Foreign Trade Act, and, for the sake of compliance by [INSERT ENTITY NAME] with the clauses 1(3)サ① or ② of the Notification for Technology Transfer, I hereby confirm that I:

- ☐ fall under the category (1) below.
- ☐ fall under the category (2) below.
- ☐ fall under the categories (1) and (2) below.
- ☐ DO NOT fall under any of the categories below and no confirmation is required.

(1) A Person who has entered into an employment contract, a delegation contract, a service contract, or any other contract with a corporation or any other organization established under the foreign laws and regulations (except for its branch offices, local offices or other offices in Japan, hereinafter referred to as a "Foreign Corporation"), or a foreign government, a foreign governmental agency, a foreign local government, a foreign central bank, a foreign political party or any other political organization (hereinafter referred to as a "Foreign Government") and is subject to the direction and order of the Foreign Corporation or the Foreign Government, or owes the duty of care of a good manager to the Foreign Corporation or the Foreign Government, according to the contract, except for either of the following cases.

(a) In the case where the Person has entered into an employment contract, a delegation contract, a service contract, or any other contract with a Japanese corporation and is subject to the direction and order of the Japanese corporation or owes the duty of care of a good manager to the Japanese corporation, according to the contract, the Japanese corporation or the Person has agreed with the Foreign Corporation or the Foreign Government that the direction and order of the Japanese corporation or the duty of care of a good manager to the Japanese corporation shall prevail over the direction and order of the Foreign Corporation or the Foreign Government, or the duty of care of a good manager to the Foreign Corporation or the Foreign Government.

(b) In the case where the Person has entered into an employment contract, a delegation contract, a service contract, or any other contract with a Japanese corporation and is subject to the direction and order of the Japanese corporation

or owes the duty of care of a good manager to the Japanese corporation, according to the contract, the Person has entered into an employment contract, a delegation contract, a service contract or any other contract with a Group Foreign Corporation (a Foreign Corporation that directly or indirectly holds 50% or more of the voting rights of the Japanese corporation or a Foreign Corporation of which 50% or more of the voting rights are held by the Japanese corporation. The same shall apply hereinafter.) and is subject to the direction and order of the Group Foreign Corporation or owes the duty of care a good manager to the Group Foreign Corporation, according to the contract.

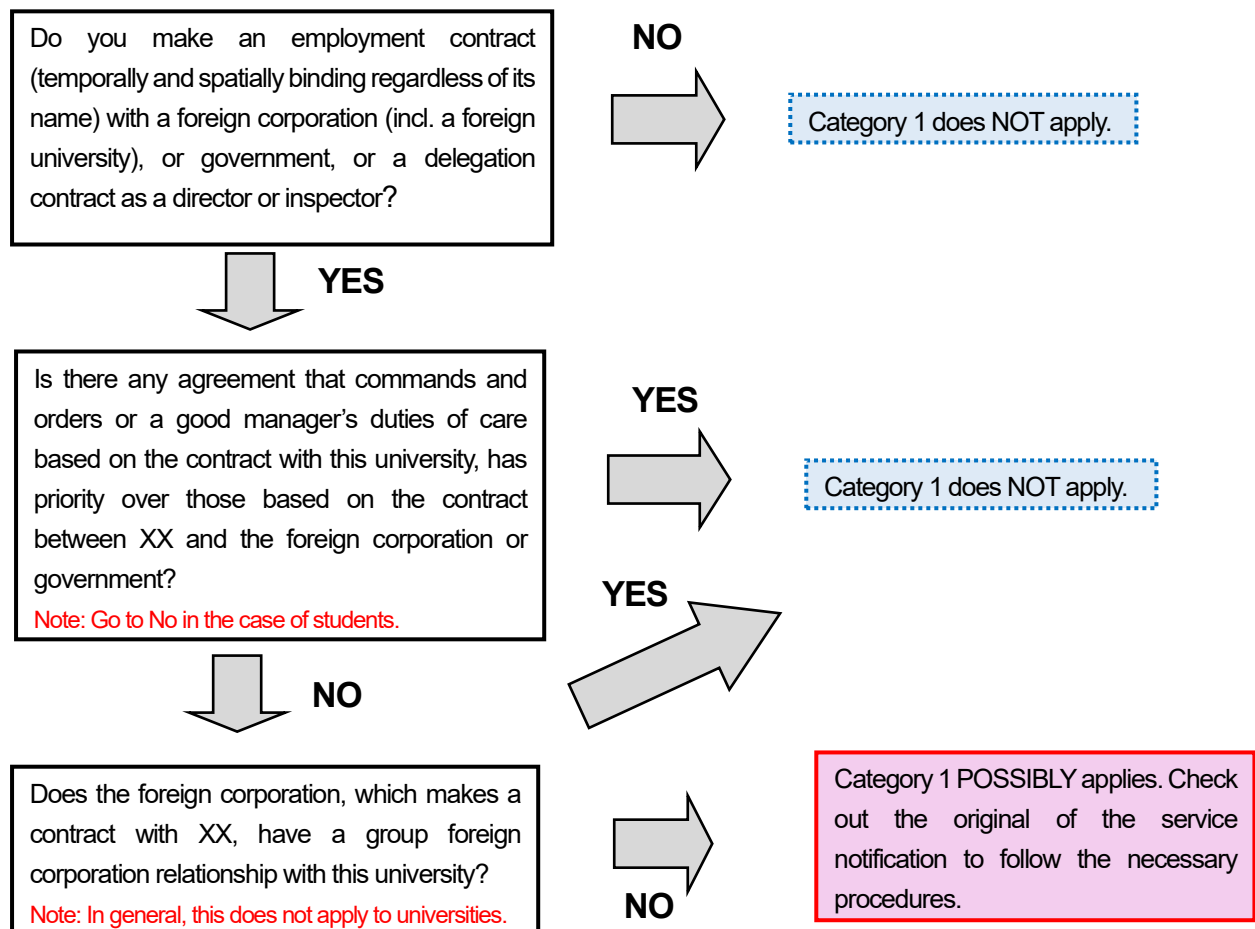

(2) A Person who earns or agrees to earn a large amount of money or other significant profit (money or other profit that accounts for 25% or more of the Person's annual income when converted into money) from a Foreign Government.

Note: The above is an English translation of the Japanese original of the pledge certificate shown in Appended Sheets 1-4 of the Service Notification. The actual usage is left to each university or research institute.

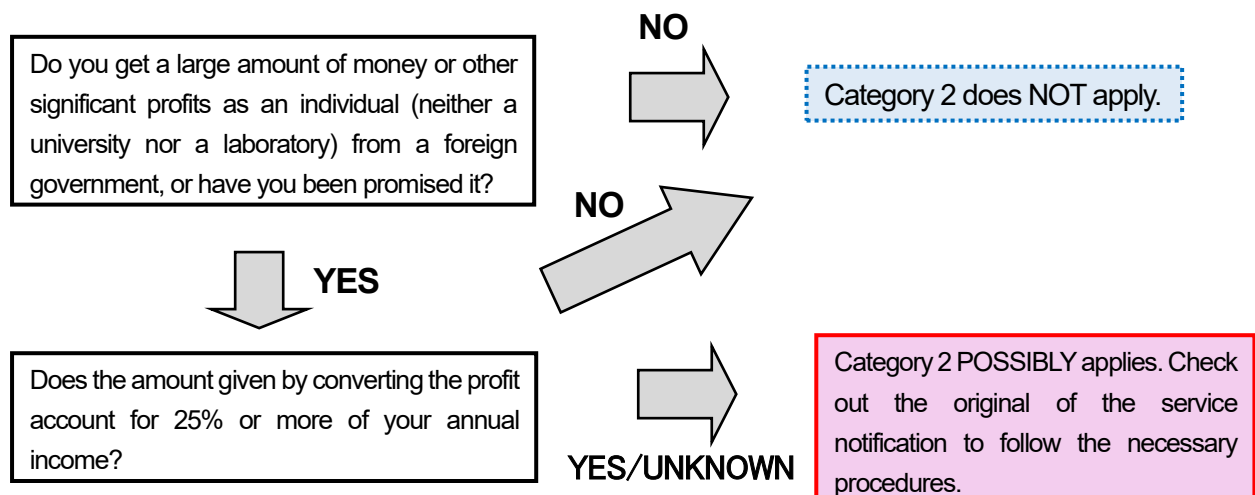

Reference: Simple Flowchart for Specific-category Classification

Note: This reference is expected to be used complementarily when the staff and students of a university make self-checks for specific category to fill out the pledge certificate or when the university make such checks according to the relevant documents. Regarding exact wording related to the requirements for specific-category classification, be sure to check out the original of the Service Notification (see pages 33 to 39 of the 4th Edition of “Guidance for the Control of Sensitive Technologies for Security Export for Academic and Research Institutions”).

(1) Category 1: When an employment contract is made with a foreign government or corporation

(2) Category 2: Economic profits are received from the foreign government
