Let's Protect Ourselves from Product Accidents

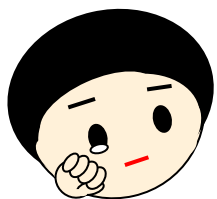

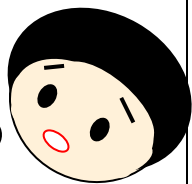

Why do we use fans or open windows to change the air, when we use gas stoves and oil heaters?

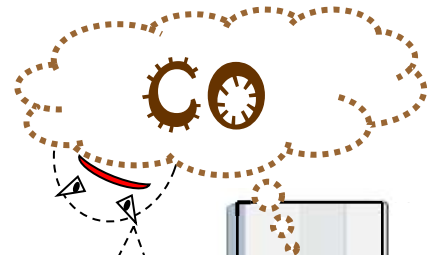

It's because a poisonous gas called CO will come out if we use oil or gas without enough air in the room.

What happens if CO comes out?

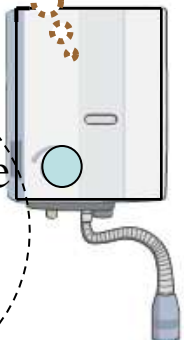

I heard that CO came out of oil heaters and gas water heaters, and killed adults and children there.

You can not see nor smell us.

You can be killed by breathing us in.

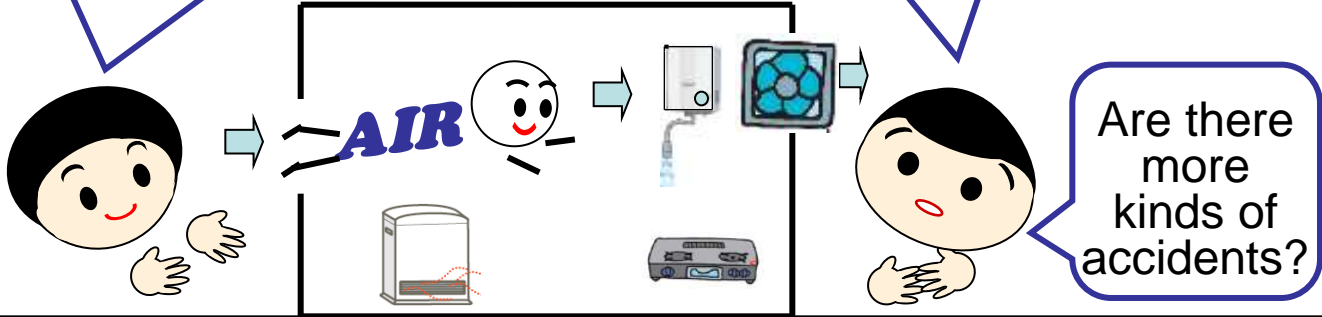

It's terrible! How can I avoid such accidents?

We are all right if we let the outside air in, by opening windows once in a while or using a fan, when we use oil or gas.

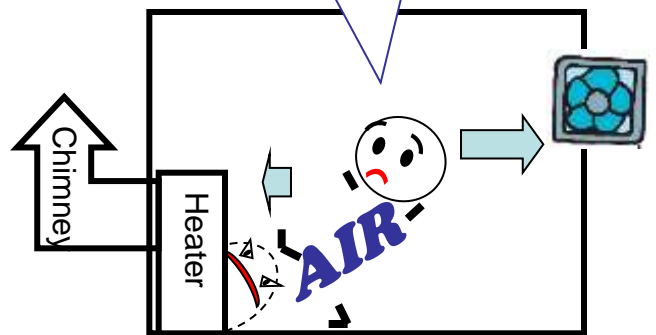

I see that fire is burning inside heaters, using lots of air. 

We checked...

When someone started a fan next to a chimney, the air could not go out from the chimney and an accident occurred. What can be done in such a situation?

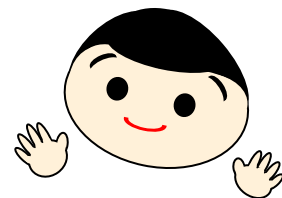

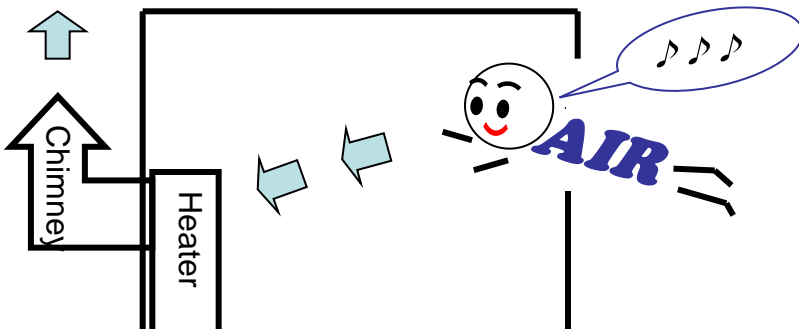

I want to go out from the chimney, but I am pulled to the other side.

Just open the window. 

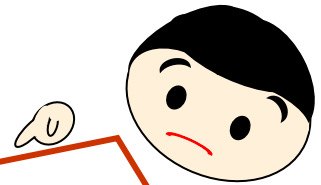

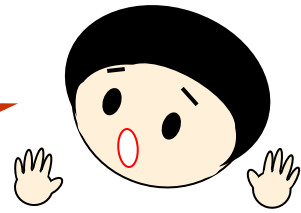

We must disappear when the outside air comes in.

How does outside air come into my house? How about our room for cooking classes?

We researched...

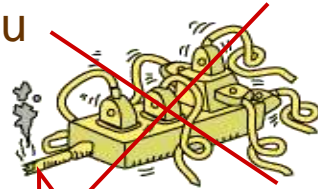

When an electricity cord is damaged, or too much electricity flows in it, it can get very hot and start a fire.

Ouch!

It is dangerous if you pull a cord, or connect too many plugs.

Hot!

Also...

Children swallowed something and suffocated to death.

Abroad, a child was killed by swallowing an accessory, which emitted poison in the stomach.

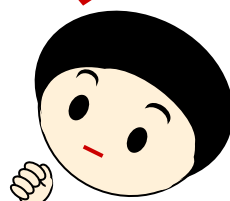

Let's make sure that small children do not swallow strange things.

Moreover...

Children lost fingers using paper shredders.

There are other dangerous products, for which free inspection and fixing are available.

If we inform everyone about such accidents, the next accident might be prevented.

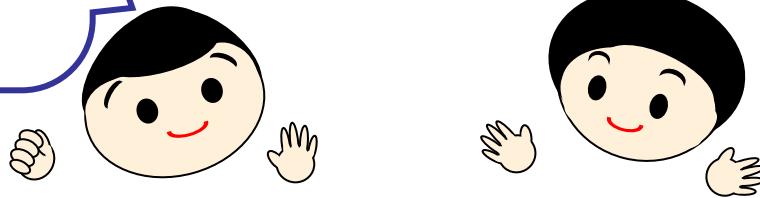

Therefore...

A law requires that if a serious accident using a product happens, the producer or the importer of the product must inform the government.

An accident happened.

Are we all right?

So that more people can understand what kind of accidents took place.

So...

It
**Serious
Accidents
happen**

**Everyone who
produces,
sells, or uses
products
knows about
them.**

Think about
the ways to
produce, sell
and use
products.

...to prevent
accidents.

Wishing for the
elimination of
sad accidents.
