### Notes

1. Figures in the following list are the actual figures in the Current Survey of Production, with which indices of Industrial Production are compiled.
2. We revised the "Current Survey of Production", so in some categories of goods the items surveyed were changed and thus the figures are not compared with the before. In order to compare the data, we calculate month-to-month and year-to-year percent changes. These goods are designated by the "●" mark.
3. We mark "★" on the goods whose inventory ratio is calculated as Inventories divided by Production.
4. The individual data for the item with "○" mark are kept secret, because these data are collected from only one or two firms.
5. We define indices as follows.
6. We notation "【】" on the unit is inventory unit.
